A WEEK ON THE CONCORD AND
MERRIMACK RIVERS

Where'er thou sail'st who sailed with me,
Though now thou climbest loftier mounts,
And fairer rivers dost ascend,
Be thou my Muse, my Brother —.

I am bound, I am bound, for a distant shore.
By a lonely isle, by a far Azore,
There it is, there it is, the treasure I seek,
On the barren sands of a desolate creek.

I sailed up a river with a pleasant wind,
New lands, new people, and new thoughts to find;
Many fair reaches and headlands appeared,
And many dangers were there to be feared;
But when I remember where I have been,
And the fair landscapes that I have seen,
THOU seemest the only permanent shore,
The cape never rounded, nor wandered o'er.

Fluminaque obliquis cinxit declivia ripis;
Quæ, diversa locis, partim sorbentur ab ipsa;
In mare perveniunt partim, campoque recepta
Liberioris aquæ pro ripis litora pulsan.

He confined the rivers within their sloping banks,
Which in different places are part absorbed by the earth
Part reach the sea, and being received within the plain
Of its freer waters, beat the shore for banks.

OVID, *Met.* I. 39.

CONCORD RIVER

Beneath low hills, in the broad interval
Through which at will our Indian rivulet
Winds mindful still of sannup and of squaw,
Whose pipe and arrow oft the plough unburies,
Here in pine houses built of new-fallen trees,
Supplanters of the tribe, the farmers dwell.

EMERSON.

THE Musketaquid, or Grass-ground River, though probably as old as the Nile or Euphrates, did not begin to have a place in civilized history until the fame of its grassy meadows and its fish attracted settlers out of England in 1635, when it received the other but kindred name of CONCORD from the first plantation on its banks, which appears to have been commenced in a spirit of peace and harmony. It will be Grass-ground River as long as grass grows and water runs here; it will be Concord River only while men lead peaceable lives on its banks. To an extinct race it was grass-ground, where they hunted and fished; and it is still perennial grass-ground to Concord farmers, who own the Great Meadows, and get the hay from year to year. "One branch of it," according to the historian of Concord, for I love to quote so good authority, "rises in the south part of Hopkinton, and another from a pond and a large cedar-swamp in Westborough," and flowing between Hopkinton and Southborough, through Framingham, and between Sudbury and Wayland, where it is some-

times called Sudbury River, it enters Concord at the south part of the town, and after receiving the North or Assabet River, which has its source a little farther to the north and west, goes out at the northeast angle, and, flowing between Bedford and Carlisle, and through Billerica, empties into the Merrimack at Lowell. In Concord, it is in summer from four to fifteen feet deep, and from one hundred to three hundred feet wide, but in the spring freshets, when it overflows its banks, it is in some places nearly a mile wide. Between Sudbury and Wayland the meadows acquire their greatest breadth, and when covered with water, they form a handsome chain of shallow vernal lakes, resorted to by numerous gulls and ducks. Just above Sherman's Bridge, between these towns, is the largest expanse; and when the wind blows freshly in a raw March day, heaving up the surface into dark and sober billows or regular swells, skirted as it is in the distance with alder swamps and smoke-like maples, it looks like a smaller Lake Huron, and is very pleasant and exciting for a landsman to row or sail over. The farmhouses along the Sudbury shore, which rises gently to a considerable height, command fine water prospects at this season. The shore is more flat on the Wayland side, and this town is the greatest loser by the flood. Its farmers tell me that thousands of acres are flooded now, since the dams have been erected, where they remember to have seen the white honeysuckle or clover growing once, and they could go dry with shoes only in summer. Now there is nothing but blue-joint and sedge and cut-grass there, standing in water all the year round. For a long time, they made the

most of the driest season to get their hay, working sometimes till nine o'clock at night, sedulously paring with their scythes in the twilight round the hummocks left by the ice; but now it is not worth the getting when they can come at it, and they look sadly round to their woodlots and upland as a last resource.

It is worth the while to make a voyage up this stream, if you go no farther than Sudbury, only to see how much country there is in the rear of us: great hills, and a hundred brooks, and farmhouses, and barns, and haystacks, you never saw before, and men everywhere; Sudbury, that is *Southborough* men, and Wayland, and Nine-Acre-Corner men, and Bound Rock, where four towns bound on a rock in the river, Lincoln, Wayland, Sudbury, Concord. Many waves are there agitated by the wind, keeping nature fresh, the spray blowing in your face, reeds and rushes waving; ducks by the hundred, all uneasy in the surf, in the raw wind, just ready to rise, and now going off with a clatter and a whistling like riggers straight for Labrador, flying against the stiff gale with reefed wings, or else circling round first, with all their paddles briskly moving, just over the surf, to reconnoitre you before they leave these parts; gulls wheeling overhead, muskrats swimming for dear life, wet and cold, with no fire to warm them by that you know of, their labored homes rising here and there like haystacks; and countless mice and moles and winged titmice along the sunny, windy shore; cranberries tossed on the waves and heaving up on the beach, their little red skiffs beating about among the alders; — such healthy natural tumult as proves the last day is not

yet at hand. And there stand all around the alders, and birches, and oaks, and maples, full of glee and sap, holding in their buds until the waters subside. You shall perhaps run aground on Cranberry Island, only some spires of last year's pipe-grass above water to show where the danger is, and get as good a freezing there as anywhere on the Northwest Coast. I never voyaged so far in all my life. You shall see men you never heard of before, whose names you don't know, going away down through the meadows with long ducking guns, with water-tight boots wading through the fowl-meadow grass, on bleak, wintry, distant shores, with guns at half-cock; and they shall see teal, — blue-winged, green-winged, — sheldrakes, whistlers, black ducks, ospreys, and many other wild and noble sights before night, such as they who sit in parlors never dream of. You shall see rude and sturdy, experienced and wise men, keeping their castles, or teaming up their summer's wood, or chopping alone in the woods; men fuller of talk and rare adventure in the sun and wind and rain, than a chestnut is of meat, who were out not only in '75 and 1812, but have been out every day of their lives; greater men than Homer, or Chaucer, or Shakespeare, only they never got time to say so; they never took to the way of writing. Look at their fields, and imagine what they might write, if ever they should put pen to paper. Or what have they not written on the face of the earth already, clearing, and burning, and scratching, and harrowing, and plowing, and subsoiling, in and in, and out and out, and over and over, again and again, erasing what they had already written for want of parchment.

As yesterday and the historical ages are past, as the work of to-day is present, so some flitting perspectives and demi-experiences of the life that is in nature are in time veritably future, or rather outside to time, perennial, young, divine, in the wind and rain which never die.

The respectable folks, —
Where dwell they?
They whisper in the oaks,
And they sigh in the hay;
Summer and winter, night and day,
Out on the meadow, there dwell they.
They never die,
Nor snivel nor cry,
Nor ask our pity
With a wet eye.
A sound estate they ever mend,
To every asker readily lend;
To the ocean wealth,
To the meadow health,
To Time his length,
To the rocks strength,
To the stars light,
To the weary night,
To the busy day,
To the idle play;
And so their good cheer never ends,
For all are their debtors, and all their friends.

Concord River is remarkable for the gentleness of its current, which is scarcely perceptible, and some have referred to its influence the proverbial moderation of the inhabitants of Concord, as exhibited in the Revolution, and on later occasions. It has been proposed that the town should adopt for its coat of arms a field verdant, with the Concord circling nine times round. I have read

that a descent of an eighth of an inch in a mile is sufficient to produce a flow. Our river has, probably, very near the smallest allowance. The story is current, at any rate, though I believe that strict history will not bear it out, that the only bridge ever carried away on the main branch, within the limits of the town, was driven up-stream by the wind. But wherever it makes a sudden bend it is shallower and swifter, and asserts its title to be called a river. Compared with the other tributaries of the Merrimack, it appears to have been properly named Musketaquid, or Meadow River, by the Indians. For the most part, it creeps through broad meadows, adorned with scattered oaks, where the cranberry is found in abundance, covering the ground like a moss-bed. A row of sunken dwarf willows borders the stream on one or both sides, while at a greater distance the meadow is skirted with maples, alders, and other fluviatile trees, overrun with the grape-vine, which bears fruit in its season, purple, red, white, and other grapes. Still farther from the stream, on the edge of the firm land, are seen the gray and white dwellings of the inhabitants. According to the valuation of 1831, there were in Concord two thousand one hundred and eleven acres, or about one seventh of the whole territory, in meadow; this standing next in the list after pasturage and unimproved lands; and, judging from the returns of previous years, the meadow is not reclaimed so fast as the woods are cleared.

Let us here read what old Johnson says of these meadows in his "Wonder-Working Providence," which gives the account of New England from 1628 to 1652

and see how matters looked to him. He says of the Twelfth Church of Christ gathered at Concord: "This town is seated upon a fair fresh river, whose rivulets are filled with fresh marsh, and her streams with fish, it being a branch of that large river of Merrimack. Allwives and shad in their season come up to this town, but salmon and dace cannot come up, by reason of the rocky falls, which causeth their meadows to lie much covered with water, the which these people, together with their neighbor town, have several times essayed to cut through but cannot, yet it may be turned another way with an hundred pound charge as it appeared." As to their farming he says: "Having laid out their estate upon cattle at 5 to 20 pound a cow, when they came to winter them with inland hay, and feed upon such wild fother as was never cut before, they could not hold out the winter, but, ordinarily the first or second year after their coming up to a new plantation, many of their cattle died." And this from the same author: "Of the Planting of the 19th Church in the Mattachusets' Government, called Sudbury:" "This year [does he mean 1654?] the town and church of Christ at Sudbury began to have the first foundation stones laid, taking up her station in the inland country, as her elder sister Concord had formerly done, lying further up the same river, being furnished with great plenty of fresh marsh, but, it lying very low is much indamaged with land floods, insomuch that when the summer proves wet they lose part of their hay; yet are they so sufficiently provided that they take in cattle of other towns to winter."

The sluggish artery of the Concord meadows steals

thus unobserved through the town, without a murmur or a pulse-beat, its general course from southwest to northeast, and its length about fifty miles; a huge volume of matter, ceaselessly rolling through the plains and valleys of the substantial earth with the moccasined tread of an Indian warrior, making haste from the high places of the earth to its ancient reservoir. The murmurs of many a famous river on the other side of the globe reach even to us here, as to more distant dwellers on its banks; many a poet's stream, floating the helms and shields of heroes on its bosom. The Xanthus or Scamander is not a mere dry channel and bed of a mountain torrent, but fed by the ever-flowing springs of fame: —

“And thou Simois, that as an arrowe, clere
Through Troy rennest, aie downward to the sea;” —

and I trust that I may be allowed to associate our muddy but much abused Concord River with the most famous in history.

“Sure there are poets which did never dream
Upon Parnassus, nor did taste the stream
Of Helicon; we therefore may suppose
Those made not poets, but the poets those.”

The Mississippi, the Ganges, and the Nile, those journeying atoms from the Rocky Mountains, the Himalah, and Mountains of the Moon, have a kind of personal importance in the annals of the world. The heavens are not yet drained over their sources, but the Mountains of the Moon still send their annual tribute to the Pasha without fail, as they did to the Pharaohs,

though he must collect the rest of his revenue at the point of the sword. Rivers must have been the guides which conducted the footsteps of the first travelers. They are the constant lure, when they flow by our doors, to distant enterprise and adventure; and, by a natural impulse, the dwellers on their banks will at length accompany their currents to the lowlands of the globe, or explore at their invitation the interior of continents. They are the natural highways of all nations, not only leveling the ground and removing obstacles from the path of the traveler, quenching his thirst and bearing him on their bosoms, but conducting him through the most interesting scenery, the most populous portions of the globe, and where the animal and vegetable kingdoms attain their greatest perfection.

I had often stood on the banks of the Concord, watching the lapse of the current, an emblem of all progress. following the same law with the system, with time, and all that is made; the weeds at the bottom gently bending down the stream, shaken by the watery wind, still planted where their seeds had sunk, but ere long to die and go down likewise; the shining pebbles, not yet anxious to better their condition, the chips and weeds, and occasional logs and stems of trees that floated past, fulfilling their fate, were objects of singular interest to me, and at last I resolved to launch myself on its bosom and float whither it would bear me.

SATURDAY

Come, come, my lovely fair, and let us try
Those rural delicacies.

QUARLES, *Christ's Invitation to the Soul.*

AT length, on Saturday, the last day of August, 1839, we two, brothers, and natives of Concord, weighed anchor in this river port; for Concord, too, lies under the sun, a port of entry and departure for the bodies as well as the souls of men; one shore at least exempted from all duties but such as an honest man will gladly discharge. A warm, drizzling rain had obscured the morning, and threatened to delay our voyage, but at length the leaves and grass were dried, and it came out a mild afternoon, as serene and fresh as if Nature were maturing some greater scheme of her own. After this long dripping and oozing from every pore, she began to respire again more healthily than ever. So with a vigorous shove we launched our boat from the bank, while the flags and bulrushes courtesied a God-speed, and dropped silently down the stream.

Our boat, which had cost us a week's labor in the spring, was in form like a fisherman's dory, fifteen feet long by three and a half in breadth at the widest part, painted green below, with a border of blue, with reference to the two elements in which it was to spend its existence. It had been loaded the evening before at our door, half a mile from the river, with potatoes and

melons, from a patch which we had cultivated, and a few utensils; and was provided with wheels in order to be rolled around falls, as well as with two sets of oars, and several slender poles for shoving in shallow places, and also two masts, one of which served for a tent-pole at night; for a buffalo-skin was to be our bed, and a tent of cotton cloth our roof. It was strongly built, but heavy, and hardly of better model than usual. If rightly made, a boat would be a sort of amphibious animal, a creature of two elements, related by one half its structure to some swift and shapely fish, and by the other to some strong-winged and graceful bird. The fish shows where there should be the greatest breadth of beam and depth in the hold; its fins direct where to set the oars, and the tail gives some hint for the form and position of the rudder. The bird shows how to rig and trim the sails, and what form to give to the prow, that it may balance the boat and divide the air and water best. These hints we had but partially obeyed. But the eyes, though they are no sailors, will never be satisfied with any model, however fashionable, which does not answer all the requisitions of art. However, as art is all of a ship but the wood, and yet the wood alone will rudely serve the purpose of a ship, so our boat, being of wood, gladly availed itself of the old law that the heavier shall float the lighter, and though a dull water-fowl, proved a sufficient buoy for our purpose.

“Were it the will of Heaven, an osier bough
Were vessel safe enough the seas to plough.”

Some village friends stood upon a promontory lower down the stream to wave us a last farewell; but we,

having already performed these shore rites, with excusable reserve, as befits those who are embarked on unusual enterprises, who behold but speak not, silently glided past the firm lands of Concord, both peopled cape and lonely summer meadow, with steady sweeps. And yet we did unbend so far as to let our guns speak for us, when at length we had swept out of sight, and thus left the woods to ring again with their echoes; and it may be many russet-clad children, lurking in those broad meadows, with the bittern and the woodcock and the rail, though wholly concealed by brakes and hardhack and meadow-sweet, heard our salute that afternoon.

We were soon floating past the first regular battleground of the Revolution, resting on our oars between the still visible abutments of that "North Bridge" over which in April, 1775, rolled the first faint tide of that war which ceased not till, as we read on the stone on our right, it "gave peace to these United States." As Concord poet has sung: —

"By the rude bridge that arched the flood,
Their flag to April's breeze unfurled,
Here once the embattled farmers stood
And fired the shot heard round the world.

"The foe long since in silence slept;
Alike the conqueror silent sleeps;
And Time the ruined bridge has swept
Down the dark stream which seaward creeps."

Our reflections had already acquired a historical remoteness from the scenes we had left, and we ourselves essayed to sing: —

Ah, 't is in vain the peaceful din
That wakes the ignoble town,
Not thus did braver spirits win
A patriot's renown.

There is one field beside this stream
Wherein no foot does fall,
But yet it beareth in my dream
A richer crop than all.

Let me believe a dream so dear,
Some heart beat high that day,
Above the petty Province here,
And Britain far away;

Some hero of the ancient mould,
Some arm of knightly worth,
Of strength unbought, and faith unsold,
Honored this spot of earth;

Who sought the prize his heart described,
And did not ask release,
Whose free-born valor was not bribed
By prospect of a peace.

The men who stood on yonder height
That day are long since gone;
Not the same hand directs the fight
And monumental stone.

Ye were the Grecian cities then,
The Romes of modern birth,
Where the New England husbandmen
Have shown a Roman worth.

In vain I search a foreign land
To find our Bunker Hill,
And Lexington and Concord stand
By no Laconian rill.

With such thoughts we swept gently by this now peaceful pasture-ground, on waves of Concord, in which was long since drowned the din of war.

But since we sailed
Some things have failed,
And many a dream
Gone down the stream.

Here then an aged shepherd dwelt,
Who to his flock his substance dealt,
And ruled them with a vigorous crook,
By precept of the sacred Book;
But he the pierless bridge passed o'er,
And solitary left the shore.

Anon a youthful pastor came,
Whose crook was not unknown to fame,
His lambs he viewed with gentle glance,
Spread o'er the country's wide expanse,
And fed with "Mosses from the Manse."
Here was our Hawthorne in the dale,
And here the shepherd told his tale.

That slight shaft had now sunk behind the hills,
and we had floated round the neighboring bend, and
under the new North Bridge between Ponkawtasset and
the Poplar Hill, into the Great Meadows, which, like
a broad moccasin-print, have leveled a fertile and juicy
place in nature.

On Ponkawtasset, since we took our way
Down this still stream to far Billericay,
A poet wise has settled, whose fine ray
Doth often shine on Concord's twilight day.

Like those first stars, whose silver beams on high,
Shining more brightly as the day goes by,

Most travelers cannot at first descry,
But eyes that wont to range the evening sky,

And know celestial lights, do plainly see,
And gladly hail them, numbering two or three;
For lore that 's deep must deeply studied be,
As from deep wells men read star-poetry.

These stars are never paled, though out of sight,
But like the sun they shine forever bright;
Ay, *they* are suns, though earth must in its flight
Put out its eyes that it may see their light.

Who would neglect the least celestial sound,
Or faintest light that falls on earthly ground,
If he could know it one day would be found
That star in Cygnus whither we are bound,
And pale our sun with heavenly radiance round?

Gradually the village murmur subsided, and we seemed to be embarked on the placid current of our dreams, floating from past to future as silently as one awakes to fresh morning or evening thoughts. We glided noiselessly down the stream, occasionally driving a pickerel or a bream from the covert of the pads, and the smaller bittern now and then sailed away on sluggish wings from some recess in the shore, or the larger lifted itself out of the long grass at our approach, and carried its precious legs away to deposit them in a place of safety. The tortoises also rapidly dropped into the water, as our boat ruffled the surface amid the willows, breaking the reflections of the trees. The banks had passed the height of their beauty, and some of the brighter flowers showed by their faded tints that the season was verging towards the afternoon of the year;

but this sombre tinge enhanced their sincerity, and in the still unabated heats they seemed like the mossy brink of some cool well. The narrow-leaved willow (*Salix Purshiana*) lay along the surface of the water in masses of light green foliage, interspersed with the large balls of the button-bush. The small rose-colored polygonum raised its head proudly above the water on either hand, and flowering at this season and in these localities, in front of dense fields of the white species which skirted the sides of the stream, its little streak of red looked very rare and precious. The pure white blossoms of the arrowhead stood in the shallower parts, and a few cardinals on the margin still proudly surveyed themselves reflected in the water, though the latter, as well as the pickerel-weed, was now nearly out of blossom. The snake-head (*Chelone glabra*) grew close to the shore, while a kind of coreopsis, turning its brazen face to the sun, full and rank, and a tall dull-red flower (*Eupatorium purpureum*, or trumpet-weed) formed the rear rank of the fluvial array. The bright-blue flowers of the soapwort gentian were sprinkled here and there in the adjacent meadows, like flowers which Proserpine had dropped, and still farther in the fields or higher on the bank were seen the purple gerardia, the Virginian rhexia, and drooping neottia or ladies'-tresses; while from the more distant waysides which we occasionally passed, and banks where the sun had lodged, was reflected still a dull-yellow beam from the ranks of tansy, now past its prime. In short, Nature seemed to have adorned herself for our departure with a profusion of fringes and curls, mingled with the bright tints of flowers,

reflected in the water. But we missed the white water-lily, which is the queen of river flowers, its reign being over for this season. He makes his voyage too late, perhaps, by a true water clock who delays so long. Many of this species inhabit our Concord water. I have passed down the river before sunrise on a summer morning, between fields of lilies still shut in sleep; and when, at length, the flakes of sunlight from over the bank fell on the surface of the water, whole fields of white blossoms seemed to flash open before me, as I floated along, like the unfolding of a banner, so sensible is this flower to the influence of the sun's rays.

As we were floating through the last of these familiar meadows, we observed the large and conspicuous flowers of the hibiscus, covering the dwarf willows and mingled with the leaves of the grape, and wished that we could inform one of our friends behind of the locality of this somewhat rare and inaccessible flower before it was too late to pluck it; but we were just gliding out of sight of the village spire before it occurred to us that the farmer in the adjacent meadow would go to church on the morrow, and would carry this news for us; and so by the Monday, while we should be floating on the Merrimack, our friend would be reaching to pluck this blossom on the bank of the Concord.

After a pause at Ball's Hill, the St. Anne's of Concord voyageurs, not to say any prayer for the success of our voyage, but to gather the few berries which were still left on the hills, hanging by very slender threads, we weighed anchor again, and were soon out of sight of our native village. The land seemed to grow fairer as we

withdrew from it. Far away to the southwest lay the quiet village, left alone under its elms and buttonwoods in mid-afternoon; and the hills, notwithstanding their blue, ethereal faces, seemed to cast a saddened eye on their old playfellows; but, turning short to the north, we bade adieu to their familiar outlines, and addressed ourselves to new scenes and adventures. Naught was familiar but the heavens, from under whose roof the voyageur never passes; but with their countenance, and the acquaintance we had with river and wood, we trusted to fare well under any circumstances.

From this point the river runs perfectly straight for a mile or more to Carlisle Bridge, which consists of twenty wooden piers, and when we looked back over it, its surface was reduced to a line's breadth, and appeared like a cobweb gleaming in the sun. Here and there might be seen a pole sticking up, to mark the place where some fisherman had enjoyed unusual luck, and in return had consecrated his rod to the deities who preside over these shallows. It was full twice as broad as before, deep and tranquil, with a muddy bottom, and bordered with willows, beyond which spread broad lagoons covered with pads, bulrushes, and flags.

Late in the afternoon we passed a man on the shore fishing with a long birch pole, its silvery bark left on, and a dog at his side, rowing so near as to agitate his cork with our oars, and drive away luck for a season; and when we had rowed a mile as straight as an arrow, with our faces turned towards him, and the bubbles in our wake still visible on the tranquil surface, there stood the fisher still with his dog, like statues under the other

side of the heavens, the only objects to relieve the eye in the extended meadow; and there would he stand abiding his luck, till he took his way home through the fields at evening with his fish. Thus, by one bait or another, Nature allures inhabitants into all her recesses. This man was the last of our townsmen whom we saw, and we silently through him bade adieu to our friends.

The characteristics and pursuits of various ages and races of men are always existing in epitome in every neighborhood. The pleasures of my earliest youth have become the inheritance of other men. This man is still a fisher, and belongs to an era in which I myself have lived. Perchance he is not confounded by many knowledges, and has not sought out many inventions; but how to take many fishes before the sun sets, with his slender birchen pole and flaxen line, that is invention enough for him. It is good even to be a fisherman in summer and in winter. Some men are judges, these August days, sitting on benches, even till the court rises; they sit judging there honorably, between the seasons and between meals, leading a civil, politic life, arbitrating in the case of Spaulding *versus* Cummings, it may be, from highest noon till the red vesper sinks into the west. The fisherman, meanwhile, stands in three feet of water, under the same summer's sun, arbitrating in other cases between muck-worm and shiner, amid the fragrance of water-lilies, mint, and pontederia, leading his life many rods from the dry land, within a pole's length of where the larger fishes swim. Human life is to him very much like a river, —

“renning aie downward to the sea.”

This was his observation. His honor made a great discovery in bailments.

I can just remember an old brown-coated man who was the Walton of this stream, who had come over from Newcastle, England, with his son, — the latter a stout and hearty man who had lifted an anchor in his day. A straight old man he was, who took his way in silence through the meadows, having passed the period of communication with his fellows; his old experienced coat, hanging long and straight and brown as the yellow pine bark, glittering with so much smothered sunlight, if you stood near enough, no work of art but naturalized at length. I often discovered him unexpectedly amid the pads and the gray willows when he moved, fishing in some old country method, — for youth and age then went a-fishing together, — full of incommunicable thoughts, perchance about his own Tyne and Northumberland. He was always to be seen in serene afternoons haunting the river, and almost rustling with the sedge; so many sunny hours in an old man's life, entrapping silly fish; almost grown to be the sun's familiar; what need had he of hat or raiment any, having served out his time, and seen through such thin disguises? I have seen how his coeval fates rewarded him with the yellow perch, and yet I thought his luck was not in proportion to his years; and I have seen when, with slow steps and weighed down with aged thoughts, he disappeared with his fish under his low-roofed house on the skirts of the village. I think nobody else saw him; nobody else remembers him now, for he soon after died, and migrated to new Tyne streams. His fishing was not a sport,

nor solely a means of subsistence, but a sort of solemn sacrament and withdrawal from the world, just as the aged read their Bibles.

Whether we live by the seaside, or by the lakes and rivers, or on the prairie, it concerns us to attend to the nature of fishes, since they are not phenomena confined to certain localities only, but forms and phases of the life in nature universally dispersed. The countless shoals which annually coast the shores of Europe and America are not so interesting to the student of nature as the more fertile law itself, which deposits their spawn on the tops of mountains and on the interior plains; the fish principle in nature, from which it results that they may be found in water in so many places, in greater or less numbers. The natural historian is not a fisherman who prays for cloudy days and good luck merely; but as fishing has been styled "a contemplative man's recreation," introducing him profitably to woods and water, so the fruit of the naturalist's observations is not in new genera or species, but in new contemplations still, and science is only a more contemplative man's recreation. The seeds of the life of fishes are everywhere disseminated, whether the winds waft them, or the waters float them, or the deep earth holds them; wherever a pond is dug, straightway it is stocked with this vivacious race. They have a lease of nature, and it is not yet out. The Chinese are bribed to carry their ova from province to province in jars or in hollow reeds, or the water-birds to transport them to the mountain tarns and interior lakes. There are fishes wherever there is a fluid medium, and

even in clouds and in melted metals we detect their semblance. Think how in winter you can sink a line down straight in a pasture through snow and through ice, and pull up a bright, slippery, dumb, subterranean silver or golden fish! It is curious, also, to reflect how they make one family, from the largest to the smallest. The least minnow that lies on the ice as bait for pickerel looks like a huge sea-fish cast up on the shore. In the waters of this town there are about a dozen distinct species, though the inexperienced would expect many more.

It enhances our sense of the grand security and serenity of nature to observe the still undisturbed economy and content of the fishes of this century, their happiness a regular fruit of the summer. The fresh-water sun-fish, bream, or ruff (*Pomotis vulgaris*), as it were without ancestry, without posterity, still represents the fresh-water sun-fish in nature. It is the most common of all, and seen on every urchin's string; a simple and inoffensive fish, whose nests are visible all along the shore, hollowed in the sand, over which it is steadily poised through the summer hours on waving fin. Sometimes there are twenty or thirty nests in the space of a few rods, two feet wide by half a foot in depth, and made with no little labor, the weeds being removed, and the sand shoved up on the sides, like a bowl. Here it may be seen early in summer assiduously brooding, and driving away minnows and larger fishes, even its own species, which would disturb its ova, pursuing them a few feet, and circling round swiftly to its nest again; the minnows, like young sharks, instantly entering the

empty nests, meanwhile, and swallowing the spawn, which is attached to the weeds and to the bottom, on the sunny side. The spawn is exposed to so many dangers that a very small proportion can ever become fishes, for beside being the constant prey of birds and fishes, a great many nests are made so near the shore, in shallow water, that they are left dry in a few days, as the river goes down. These and the lamprey's are the only fishes' nests that I have observed, though the ova of some species may be seen floating on the surface. The breams are so careful of their charge that you may stand close by in the water and examine them at your leisure. I have thus stood over them half an hour at a time, and stroked them familiarly without frightening them, suffering them to nibble my fingers harmlessly, and seen them erect their dorsal fins in anger when my hand approached their ova, and have even taken them gently out of the water with my hand; though this cannot be accomplished by a sudden movement, however dexterous, for instant warning is conveyed to them through their denser element, but only by letting the fingers gradually close about them as they are poised over the palm, and with the utmost gentleness raising them slowly to the surface. Though stationary, they kept up a constant sculling or waving motion with their fins, which is exceedingly graceful, and expressive of their humble happiness; for unlike ours, the element in which they live is a stream which must be constantly resisted. From time to time they nibble the weeds at the bottom or overhanging their nests, or dart after a fly or a worm. The dorsal fin, besides answering the purpose of a keel, with the anal,

serves to keep the fish upright, for in shallow water, where this is not covered, they fall on their sides. As you stand thus stooping over the bream in its nest, the edges of the dorsal and caudal fins have a singular dusty golden reflection, and its eyes, which stand out from the head, are transparent and colorless. Seen in its native element, it is a very beautiful and compact fish, perfect in all its parts, and looks like a brilliant coin fresh from the mint. It is a perfect jewel of the river, the green, red, coppery, and golden reflections of its mottled sides being the concentration of such rays as struggle through the floating pads and flowers to the sandy bottom, and in harmony with the sunlit brown and yellow pebbles. Behind its watery shield it dwells far from many accidents inevitable to human life.

There is also another species of bream found in our river, without the red spot on the operculum, which, according to M. Agassiz, is undescribed.

The common perch (*Perca flavescens*, which name describes well the gleaming, golden reflections of its scales as it is drawn out of the water, its red gills standing out in vain in the thin element) is one of the handsomest and most regularly formed of our fishes, and at such a moment as this reminds us of the fish in the picture which wished to be restored to its native element until it had grown larger; and indeed most of this species that are caught are not half grown. In the ponds there is a light-colored and slender kind, which swim in shoals of many hundreds in the sunny water, in company with the shiner, averaging not more than six or seven inches in length, while only a few larger specimens are

found in the deepest water, which prey upon their weaker brethren. I have often attracted these small perch to the shore at evening, by rippling the water with my fingers, and they may sometimes be caught while attempting to pass inside your hands. It is a tough and heedless fish, biting from impulse, without nibbling, and from impulse refraining to bite, and sculling indifferently past. It rather prefers the clear water and sandy bottoms, though here it has not much choice. It is a true fish, such as the angler loves to put into his basket or hang at the top of his willow twig, in shady afternoons along the banks of the stream. So many unquestionable fishes he counts, and so many shiners, which he counts and then throws away. Old Josselyn in his "New England's Rarities," published in 1672, mentions the Perch or River Partridge.

The chivin, dace, roach, cousin trout, or whatever else it is called (*Leuciscus pulchellus*), white and red, is always an unexpected prize, which, however, any angler is glad to hook for its rarity; — a name that reminds us of many an unsuccessful ramble by swift streams, when the wind rose to disappoint the fisher. It is commonly a silvery soft-scaled fish, of graceful, scholarlike, and classical look, like many a picture in an English book. It loves a swift current and a sandy bottom, and bites inadvertently, yet not without appetite for the bait. The minnows are used as bait for pickerel in the winter. The red chivin, according to some, is still the same fish, only older, or with its tints deepened as they think by the darker water it inhabits, as the red clouds swim in the twilight atmosphere. He who has not hooked the red

chivin is not yet a complete angler. Other fishes, methinks, are slightly amphibious, but this is a denizen of the water wholly. The cork goes dancing down the swift-rushing stream, amid the weeds and sands, when suddenly, by a coincidence never to be remembered, emerges this fabulous inhabitant of another element, a thing heard of but not seen, as if it were the instant creation of an eddy, a true product of the running stream. And this bright cupreous dolphin was spawned and has passed its life beneath the level of your feet in your native fields. Fishes, too, as well as birds and clouds, derive their armor from the mine. I have heard of mackerel visiting the copper banks at a particular season; this fish, perchance, has its habitat in the Coppermine River. I have caught white chivin of great size in the Aboljack-nagesic, where it empties into the Penobscot, at the base of Mount Ktaadn, but no red ones there. The latter variety seems not to have been sufficiently observed.

The dace (*Leuciscus argenteus*) is a slight silvery minnow, found generally in the middle of the stream where the current is most rapid, and frequently confounded with the last named.

The shiner (*Leuciscus chrysolucus*) is a soft-scaled and tender fish, the victim of its stronger neighbors, found in all places, deep and shallow, clear and turbid; generally the first nibbler at the bait, but, with its small mouth and nibbling propensities, not easily caught. It is a gold or silver bit that passes current in the river, its limber tail dimpling the surface in sport or flight. I have seen the fry, when frightened by something thrown into the water, leap out by dozens, together with the dace,

and wreck themselves upon a floating plank. It is the little light-infant of the river, with body armor of gold or silver spangles, slipping, gliding its life through with a quirk of the tail, half in the water, half in the air, upward and ever upward with flitting fin to more crystalline tides, yet still abreast of us dwellers on the bank. It is almost dissolved by the summer heats. A slighter and lighter-colored shiner is found in one of our ponds.

The pickerel (*Esox reticulatus*), the swiftest, wariest, and most ravenous of fishes, which Josselyn calls the Fresh-Water or River Wolf, is very common in the shallow and weedy lagoons along the sides of the stream. It is a solemn, stately, ruminant fish, lurking under the shadow of a pad at noon, with still, circumspect, voracious eye, motionless as a jewel set in water, or moving slowly along to take up its position, darting from time to time at such unlucky fish or frog or insect as comes within its range, and swallowing it at a gulp. I have caught one which had swallowed a brother pickerel half as large as itself, with the tail still visible in its mouth, while the head was already digested in its stomach. Sometimes a striped snake, bound to greener meadows across the stream, ends its undulatory progress in the same receptacle. They are so greedy and impetuous that they are frequently caught by being entangled in the line the moment it is cast. Fishermen also distinguish the brook pickerel, a shorter and thicker fish than the former.

The horned pout (*Pimelodus nebulosus*), sometimes called Minister, from the peculiar squeaking noise it

makes when drawn out of the water, is a dull and blundering fellow, and, like the eel, vespertinal in his habits and fond of the mud. It bites deliberately, as if about its business. They are taken at night with a mass of worms strung on a thread, which catches in their teeth, sometimes three or four, with an eel, at one pull. They are extremely tenacious of life, opening and shutting their mouths for half an hour after their heads have been cut off; a bloodthirsty and bullying race of rangers, inhabiting the fertile river bottoms, with ever a lance in rest, and ready to do battle with their nearest neighbor. I have observed them in summer, when every other one had a long and bloody scar upon his back, where the skin was gone, the mark, perhaps, of some fierce encounter. Sometimes the fry, not an inch long, are seen darkening the shore with their myriads.

The suckers (*Catostomi Bostonienses* and *tuberculati*), common and horned, perhaps on an average the largest of our fishes, may be seen in shoals of a hundred or more, stemming the current in the sun, on their mysterious migrations, and sometimes sucking in the bait which the fisherman suffers to float toward them. The former, which sometimes grow to a large size, are frequently caught by the hand in the brooks, or like the red chivin are jerked out by a hook fastened firmly to the end of a stick, and placed under their jaws. They are hardly known to the mere angler, however, not often biting at his baits, though the spearer carries home many a mess in the spring. To our village eyes, these shoals have a foreign and imposing aspect, realizing the fertility of the seas.

The common eel, too (*Muræna Bostoniensis*), the only species of eel known in the State, a slimy, squirming creature, informed of mud, still squirming in the pan, is speared and hooked up with various success. Methinks it too occurs in picture, left after the deluge, in many a meadow high and dry.

In the shallow parts of the river, where the current is rapid and the bottom pebbly, you may sometimes see the curious circular nests of the lamprey eel (*Petromyzon Americanus*), the American stone-sucker, as large as a cart-wheel, a foot or two in height, and sometimes rising half a foot above the surface of the water. They collect these stones, of the size of a hen's egg, with their mouths, as their name implies, and are said to fashion them into circles with their tails. They ascend falls by clinging to the stones, which may sometimes be raised by lifting the fish by the tail. As they are not seen on their way down the streams, it is thought by fishermen that they never return, but waste away and die, clinging to rocks and stumps of trees for an indefinite period; a tragic feature in the scenery of the river bottoms worthy to be remembered with Shakespeare's description of the sea-floor. They are rarely seen in our waters at present, on account of the dams, though they are taken in great quantities at the mouth of the river in Lowell. Their nests, which are very conspicuous, look more like art than anything in the river.

If we had leisure this afternoon, we might turn our prow up the brooks in quest of the classical trout and the minnows. Of the last alone, according to M. Agassiz, several of the species found in this town are yet unde-

scribed. These would, perhaps, complete the list of our finny contemporaries in the Concord waters.

Salmon, shad, and alewives were formerly abundant here, and taken in weirs by the Indians, who taught this method to the whites, by whom they were used as food and as manure, until the dam and afterward the canal at Billerica, and the factories at Lowell, put an end to their migrations hitherward; though it is thought that a few more enterprising shad may still occasionally be seen in this part of the river. It is said, to account for the destruction of the fishery, that those who at that time represented the interests of the fishermen and the fishes, remembering between what dates they were accustomed to take the grown shad, stipulated that the dams should be left open for that season only, and the fry, which go down a month later, were consequently stopped and destroyed by myriads. Others say that the fish-ways were not properly constructed. Perchance, after a few thousands of years, if the fishes will be patient, and pass their summers elsewhere meanwhile, nature will have leveled the Billerica dam, and the Lowell factories, and the Grass-ground River run clear again, to be explored by new migratory shoals, even as far as the Hopkinton pond and Westborough swamp.

One would like to know more of that race, now extinct, whose seines lie rotting in the garrets of their children, who openly professed the trade of fishermen, and even fed their townsmen creditably, not skulking through the meadows to a rainy afternoon sport. Dim visions we still get of miraculous draughts of fishes, and heaps uncountable by the riverside, from the tales of

our seniors sent on horseback in their childhood from the neighboring towns, perched on saddle-bags, with instructions to get the one bag filled with shad, the other with alewives. At least one memento of those days may still exist in the memory of this generation, in the familiar appellation of a celebrated train-band of this town, whose untrained ancestors stood creditably at Concord North Bridge. Their captain, a man of piscatory tastes, having duly warned his company to turn out on a certain day, they, like obedient soldiers, appeared promptly on parade at the appointed time, but, unfortunately, they went undrilled, except in the manœuvres of a soldier's wit and unlicensed jesting, that May day; for their captain, forgetting his own appointment, and warned only by the favorable aspect of the heavens, as he had often done before, went a-fishing that afternoon, and his company thenceforth was known to old and young, grave and gay, as "The Shad," and by the youths of this vicinity this was long regarded as the proper name of all the irregular militia in Christendom. But, alas! no record of these fishers' lives remains that we know, unless it be one brief page of hard but unquestionable history, which occurs in Day Book No. 4, of an old trader of this town, long since dead, which shows pretty plainly what constituted a fisherman's stock in trade in those days. It purports to be a Fisherman's Account Current, probably for the fishing season of the year 1805, during which months he purchased daily rum and sugar, sugar and rum, N. E. and W. I., "one cod line," "one brown mug," and "a line for the seine;" rum and sugar, sugar and rum, "good loaf sugar," and

"good brown," W. I. and N. E., in short and uniform entries to the bottom of the page, all carried out in pounds, shillings, and pence, from March 25 to June 5, and promptly settled by receiving "cash in full" at the last date. But perhaps not so settled altogether. These were the necessities of life in those days; with salmon, shad, and alewives, fresh and pickled, he was thereafter independent on the groceries. Rather a preponderance of the fluid elements; but such is the fisherman's nature. I can faintly remember to have seen this same fisher in my earliest youth, still as near the river as he could get, with uncertain, undulatory step, after so many things had gone down-stream, swinging a scythe in the meadow, his bottle like a serpent hid in the grass; himself as yet not cut down by the Great Mower.

Surely the fates are forever kind, though Nature's laws are more immutable than any despot's, yet to man's daily life they rarely seem rigid, but permit him to relax with license in summer weather. He is not harshly reminded of the things he may not do. She is very kind and liberal to all men of vicious habits, and certainly does not deny them quarter; they do not die without priest. Still they maintain life along the way, keeping this side the Styx, still hearty, still resolute, "never better in their lives;" and again, after a dozen years have elapsed, they start up from behind a hedge, asking for work and wages for able-bodied men. Who has not met such

"a beggar on the way,
Who sturdily could gang? . . .
Who cared neither for wind nor wet,
In lands where'er he past?"

"That bold adopts each house he views, his own;
Makes every purse his checquer, and, at pleasure,
Walks forth, and taxes all the world, like Cæsar;" —

as if consistency were the secret of health, while the poor inconsistent aspirant man, seeking to live a pure life, feeding on air, divided against himself, cannot stand, but pines and dies after a life of sickness, on beds of down.

The unwise are accustomed to speak as if some were not sick; but methinks the difference between men in respect to health is not great enough to lay much stress upon. Some are reputed sick and some are not. It often happens that the sicker man is the nurse to the sounder.

Shad are still taken in the basin of Concord River, at Lowell, where they are said to be a month earlier than the Merrimack shad, on account of the warmth of the water. Still patiently, almost pathetically, with instinct not to be discouraged, not to be *reasoned* with, revisiting their old haunts, as if their stern fates would relent, and still met by the Corporation with its dam. Poor shad! where is thy redress? When Nature gave thee instinct, gave she thee the heart to bear thy fate? Still wandering the sea in thy scaly armor to inquire humbly at the mouths of rivers if man has perchance left them free for thee to enter. By countless shoals loitering uncertain meanwhile, merely stemming the tide there, in danger from sea foes in spite of thy bright armor, awaiting new instructions, until the sands, until the water itself, tell thee if it be so or not. Thus by whole migrating nations, full of instinct, which is thy faith, in this

backward spring, turned adrift, and perchance knowest not where men do *not* dwell, where there are *not* factories, in these days. Armed with no sword, no electric shock, but mere shad, armed only with innocence and a just cause, with tender dumb mouth only forward, and scales easy to be detached. I for one am with thee, and who knows what may avail a crowbar against that Billerica dam? — Not despairing when whole myriads have gone to feed those sea monsters during thy suspense, but still brave, indifferent, on easy fin there, like shad reserved for higher destinies. Willing to be decimated for man's behoof after the spawning season. Away with the superficial and selfish *phil-anthropy* of men, — who knows what admirable virtue of fishes may be below low-water-mark, bearing up against a hard destiny, not admired by that fellow-creature who alone can appreciate it! Who hears the fishes when they cry? It will not be forgotten by some memory that we were contemporaries. Thou shalt ere long have thy way up the rivers, up all the rivers of the globe, if I am not mistaken. Yea, even thy dull watery dream shall be more than realized. If it were not so, but thou wert to be overlooked at first and at last, then would not I take their heaven. Yes, I say so, who think I know better than thou canst. Keep a stiff fin, then, and stem all the tides thou mayst meet.

At length it would seem that the interests, not of the fishes only, but of the men of Wayland, of Sudbury, of Concord, demand the leveling of that dam. Innumerable acres of meadow are waiting to be made dry land, wild native grass to give place to English. The farmers

stand with scythes whet, waiting the subsiding of the waters, by gravitation, by evaporation, or otherwise, but sometimes their eyes do not rest, their wheels do not roll, on the quaking meadow ground during the haying season at all. So many sources of wealth inaccessible. They rate the loss hereby incurred in the single town of Wayland alone as equal to the expense of keeping a hundred yoke of oxen the year round. One year, as I learn, not long ago, the farmers standing ready to drive their teams afield as usual, the water gave no signs of falling; without new attraction in the heavens, without freshet or visible cause, still standing stagnant at an unprecedented height. All hydrometers were at fault; some trembled for their English, even. But speedy emissaries revealed the unnatural secret, in the new float-board, wholly a foot in width, added to their already too high privileges by the dam proprietors. The hundred yoke of oxen, meanwhile, standing patient, gazing wishfully meadowward, at that inaccessible waving native grass, uncut but by the great mower Time, who cuts so broad a swath, without so much as a wisp to wind about their horns.

That was a long pull from Ball's Hill to Carlisle Bridge, sitting with our faces to the south, a slight breeze rising from the north; but nevertheless water still runs and grass grows, for now, having passed the bridge between Carlisle and Bedford, we see men haying far off in the meadow, their heads waving like the grass which they cut. In the distance the wind seemed to bend all alike. As the night stole over, such a freshness was

wafted across the meadow that every blade of cut grass seemed to teem with life. Faint purple clouds began to be reflected in the water, and the cow-bells tinkled louder along the banks, while, like sly water-rats, we stole along nearer the shore, looking for a place to pitch our camp.

At length, when we had made about seven miles, as far as Billerica, we moored our boat on the west side of a little rising ground which in the spring forms an island in the river. Here we found huckleberries still hanging upon the bushes, where they seemed to have slowly ripened for our especial use. Bread and sugar, and cocoa boiled in river water, made our repast, and as we had drank in the fluvial prospect all day, so now we took a draft of the water with our evening meal to propitiate the river gods, and whet our vision for the sights it was to behold. The sun was setting on the one hand, while our eminence was contributing its shadow to the night on the other. It seemed insensibly to grow lighter as the night shut in, and a distant and solitary farmhouse was revealed, which before lurked in the shadows of the noon. There was no other house in sight, nor any cultivated field. To the right and left, as far as the horizon, were straggling pine woods with their plumes against the sky, and across the river were rugged hills, covered with shrub oaks, tangled with grape-vines and ivy, with here and there a gray rock jutting out from the maze. The sides of these cliffs, though a quarter of a mile distant, were almost heard to rustle while we looked at them, it was such a leafy wilderness; a place for fauns and satyrs, and where bats hung all day to the rocks, and at

evening flitted over the water, and fireflies husbanded their light under the grass and leaves against the night. When we had pitched our tent on the hillside, a few rods from the shore, we sat looking through its triangular door in the twilight at our lonely mast on the shore just seen above the alders, and hardly yet come to a standstill from the swaying of the stream; the first encroachment of commerce on this land. There was our port, our Ostia. That straight, geometrical line against the water and the sky stood for the last refinements of civilized life, and what of sublimity there is in history was there symbolized.

For the most part, there was no recognition of human life in the night; no human breathing was heard, only the breathing of the wind. As we sat up, kept awake by the novelty of our situation, we heard at intervals foxes stepping about over the dead leaves, and brushing the dewy grass close to our tent, and once a musquash fumbling among the potatoes and melons in our boat; but when we hastened to the shore we could detect only a ripple in the water ruffling the disk of a star. At intervals we were serenaded by the song of a dreaming sparrow or the throttled cry of an owl; but after each sound which near at hand broke the stillness of the night, each crackling of the twigs, or rustling among the leaves, there was a sudden pause, and deeper and more conscious silence, as if the intruder were aware that no life was rightfully abroad at that hour. There was a fire in Lowell, as we judged, this night, and we saw the horizon blazing, and heard the distant alarm-bells, as it were a faint tinkling music borne to these woods. But the most

constant and memorable sound of a summer's night, which we did not fail to hear every night afterward, though at no time so incessantly and so favorably as now, was the barking of the house-dogs, from the loudest and hoarsest bark to the faintest aerial palpitation under the eaves of heaven, from the patient but anxious mastiff to the timid and wakeful terrier, at first loud and rapid, then faint and slow, to be imitated only in a whisper: wow-wow-wow-wow — wo — wo — w — w. Even in a retired and uninhabited district like this, it was a sufficiency of sound for the ear of night, and more impressive than any music. I have heard the voice of a hound, just before daylight, while the stars were shining, from over the woods and river, far in the horizon, when it sounded as sweet and melodious as an instrument. The hounding of a dog pursuing a fox or other animal in the horizon may have first suggested the notes of the hunting-horn to alternate with and relieve the lungs of the dog. This natural bugle long resounded in the woods of the ancient world before the horn was invented. The very dogs that sullenly bay the moon from farm-yards in these nights excite more heroism in our breasts than all the civil exhortations or war sermons of the age. "I would rather be a dog, and bay the moon," than many a Roman that I know. The night is equally indebted to the clarion of the cock, with wakeful hope, from the very setting of the sun, prematurely ushering in the dawn. All these sounds, the crowing of cocks, the baying of dogs, and the hum of insects at noon, are the evidence of nature's health or *sound* state. Such is the never-failing beauty and accuracy of language, the most per-

fect art in the world; the chisel of a thousand years retouches it.

At length the antepenultimate and drowsy hours drew on, and all sounds were denied entrance to our ears.

Who sleeps by day and walks by night,
Will meet no spirit, but some sprite.

SUNDAY

The river calmly flows,
Through shining banks, through lonely glen,
Where the owl shrieks, though ne'er the cheer of men
Has stirred its mute repose,
Still if you should walk there, you would go there again.

CHANNING.

The Indians tell us of a beautiful river lying far to the south, which they call Merrimack. — SIEUR DE MONTS, *Relations of the Jesuits*, 1604.

IN the morning the river and adjacent country were covered with a dense fog, through which the smoke of our fire curled up like a still subtler mist; but before we had rowed many rods, the sun arose and the fog rapidly dispersed, leaving a slight steam only to curl along the surface of the water. It was a quiet Sunday morning, with more of the auroral rosy and white than of the yellow light in it, as if it dated from earlier than the fall of man, and still preserved a heathenish integrity: —

An early unconverted Saint,
Free from noontide or evening taint,
Heathen without reproach,
That did upon the civil day encroach,
And ever since its birth
Had trod the outskirts of the earth.

But the impressions which the morning makes vanish with its dews, and not even the most “persevering mortal” can preserve the memory of its freshness to midday.

As we passed the various islands or what were islands in the spring, rowing with our backs down-stream, we gave names to them. The one on which we had camped we called Fox Island, and one fine densely wooded island surrounded by deep water and overrun by grape-vines, which looked like a mass of verdure and of flowers cast upon the waves, we named Grape Island. From Ball's Hill to Billerica meeting-house, the river was still twice as broad as in Concord, a deep, dark, and dead stream, flowing between gentle hills and sometimes cliffs, and well wooded all the way. It was a long woodland lake bordered with willows. For long reaches we could see neither house nor cultivated field, nor any sign of the vicinity of man. Now we coasted along some shallow shore by the edge of a dense palisade of bulrushes, which straightly bounded the water as if clipped by art, reminding us of the reed forts of the East-Indians of which we had read; and now the bank, slightly raised, was overhung with graceful grasses and various species of brake, whose downy stems stood closely grouped and naked as in a vase, while their heads spread several feet on either side. The dead limbs of the willow were rounded and adorned by the climbing mikania (*Mikania scandens*), which filled every crevice in the leafy bank, contrasting agreeably with the gray bark of its supporter and the balls of the button-bush. The water willow (*Salix Purshiana*), when it is of large size and entire, is the most graceful and ethereal of our trees. Its masses of light-green foliage, piled one upon another to the height of twenty or thirty feet, seemed to float on the surface of the water, while the slight gray stems and the

shore were hardly visible between them. No tree is so wedded to the water, and harmonizes so well with still streams. It is even more graceful than the weeping willow, or any pendulous trees which dip their branches in the stream instead of being buoyed up by it. Its limbs curved outward over the surface as if attracted by it. It had not a New England but an Oriental character, reminding us of trim Persian gardens, of Haroun Al-raschid, and the artificial lakes of the East.

As we thus dipped our way along between fresh masses of foliage overrun with the grape and smaller flowering vines, the surface was so calm, and both air and water so transparent, that the flight of a kingfisher or robin over the river was as distinctly seen reflected in the water below as in the air above. The birds seemed to flit through submerged groves, alighting on the yielding sprays, and their clear notes to come up from below. We were uncertain whether the water floated the land, or the land held the water in its bosom. It was such a season, in short, as that in which one of our Concord poets sailed on its stream, and sung its quiet glories.

“There is an inward voice, that in the stream
Sends forth its spirit to the listening ear,
And in a calm content it floweth on,
Like wisdom, welcome with its own respect.
Clear in its breast lie all these beauteous thoughts,
It doth receive the green and graceful trees,
And the gray rocks smile in its peaceful arms.”

And more he sung, but too serious for our page. For every oak and birch, too, growing on the hilltop, as well as for these elms and willows, we knew that there was a

graceful ethereal and ideal tree making down from the roots, and sometimes Nature in high tides brings her mirror to its foot and makes it visible. The stillness was intense and almost conscious, as if it were a natural Sabbath, and we fancied that the morning was the evening of a celestial day. The air was so elastic and crystalline that it had the same effect on the landscape that a glass has on a picture, to give it an ideal remoteness and perfection. The landscape was clothed in a mild and quiet light, in which the woods and fences checkered and partitioned it with new regularity, and rough and uneven fields stretched away with lawn-like smoothness to the horizon, and the clouds, finely distinct and picturesque, seemed a fit drapery to hang over fairyland. The world seemed decked for some holiday or prouder pageantry, with silken streamers flying, and the course of our lives to wind on before us like a green lane into a country maze, at the season when fruit-trees are in blossom.

Why should not our whole life and its scenery be actually thus fair and distinct? All our lives want a suitable background. They should at least, like the life of the anchorite, be as impressive to behold as objects in the desert, a broken shaft or crumbling mound against a limitless horizon. Character always secures for itself this advantage, and is thus distinct and unrelated to near or trivial objects, whether things or persons. On this same stream a maiden once sailed in my boat, thus unattended but by invisible guardians, and as she sat in the prow there was nothing but herself between the steersman and the sky. I could then say with the poet, —

“Sweet falls the summer air
Over her frame who sails with me;
Her way like that is beautifully free,
Her nature far more rare,
And is her constant heart of virgin purity.”

At evening, still the very stars seem but this maiden's
emissaries and reporters of her progress.

Low in the eastern sky
Is set thy glancing eye;
And though its gracious light
Ne'er riseth to my sight,
Yet every star that climbs
Above the gnarled limbs
Of yonder hill,
Conveys thy gentle will.

Believe I knew thy thought,
And that the zephyrs brought
Thy kindest wishes through,
As mine they bear to you,
That some attentive cloud
Did pause amid the crowd
Over my head,
While gentle things were said.

Believe the thrushes sung,
And that the flower-bells rung,
That herbs exhaled their scent,
And beasts knew what was meant,
The trees a welcome waved,
And lakes their margins laved,
When thy free mind
To my retreat did wind.

It was a summer eve,
The air did gently heave

While yet a low-hung cloud
Thy eastern skies did shroud ;
The lightning's silent gleam,
Startling my drowsy dream,
 Seemed like the flash
Under thy dark eyelash.

Still will I strive to be
As if thou wert with me ;
Whatever path I take,
It shall be for thy sake,
Of gentle slope and wide,
As thou wert by my side,
 Without a root
To trip thy gentle foot.

I'll walk with gentle pace,
And choose the smoothest place,
And careful dip the oar,
And shun the winding shore,
And gently steer my boat
Where water-lilies float,
 And cardinal-flowers
Stand in their sylvan bowers.

It required some rudeness to disturb with our boat the mirror-like surface of the water, in which every twig and blade of grass was so faithfully reflected; too faithfully indeed for art to imitate, for only Nature may exaggerate herself. The shallowest still water is unfathomable. Wherever the trees and skies are reflected, there is more than Atlantic depth, and no danger of fancy running aground. We notice that it required a separate intention of the eye, a more free and abstracted vision, to see the reflected trees and the sky, than to see the river bottom merely; and so are there manifold

visions in the direction of every object, and even the most opaque reflect the heavens from their surface. Some men have their eyes naturally intended to the one and some to the other object.

“A man that looks on glass,
On it may stay his eye,
Or, if he pleaseth, through it pass,
And the heavens espy.”

Two men in a skiff, whom we passed hereabouts, floating buoyantly amid the reflections of the trees, like a feather in mid-air, or a leaf which is wafted gently from its twig to the water without turning over, seemed still in their element, and to have very delicately availed themselves of the natural laws. Their floating there was a beautiful and successful experiment in natural philosophy, and it served to ennoble in our eyes the art of navigation; for as birds fly and fishes swim, so these men sailed. It reminded us how much fairer and nobler all the actions of man might be, and that our life in its whole economy might be as beautiful as the fairest works of art or nature.

The sun lodged on the old gray cliffs, and glanced from every pad; the bulrushes and flags seemed to rejoice in the delicious light and air; the meadows were a-drinking at their leisure; the frogs sat meditating, all Sabbath thoughts, summing up their week, with one eye out on the golden sun, and one toe upon a reed, eying the wondrous universe in which they act their part; the fishes swam more staid and soberly, as maidens go to church; shoals of golden and silver minnows rose to the surface to behold the heavens, and then sheered off into

more sombre aisles; they swept by as if moved by one mind, continually gliding past each other, and yet preserving the form of their battalion unchanged, as if they were still embraced by the transparent membrane which held the spawn; a young band of brethren and sisters trying their new fins; now they wheeled, now shot ahead, and when we drove them to the shore and cut them off, they dexterously tacked and passed underneath the boat. Over the old wooden bridges no traveler crossed, and neither the river nor the fishes avoided to glide between the abutments.

Here was a village not far off behind the woods, Billerica, settled not long ago, and the children still bear the names of the first settlers in this late "howling wilderness;" yet to all intents and purposes it is as old as Fernay or as Mantua, an old gray town where men grow old and sleep already under moss-grown monuments, — outgrow their usefulness. This is ancient Billerica (Villarica?), now in its dotage, named from the English Billericay, and whose Indian name was Shawshine. I never heard that it was young. See, is not nature here gone to decay, farms all run out, meeting-house grown gray and racked with age? If you would know of its early youth, ask those old gray rocks in the pasture. It has a bell that sounds sometimes as far as Concord woods; I have heard that, — ay, hear it now. No wonder that such a sound startled the dreaming Indian, and frightened his game, when the first bells were swung on trees, and sounded through the forest beyond the plantations of the white man; but to-day I like best the echo amid these cliffs and woods. It is no

feeble imitation, but rather its original, or as if some rural Orpheus played over the strain again to show how it should sound.

Dong, sounds the brass in the east,
As if to a funeral feast,
But I like that sound the best
Out of the fluttering west.

The steeple ringeth a knell,
But the fairies' silvery bell
Is the voice of that gentle folk,
Or else the horizon that spoke.

Its metal is not of brass,
But air, and water, and glass,
And under a cloud it is swung,
And by the wind it is rung.

When the steeple tolleth the noon,
It soundeth not so soon,
Yet it rings a far earlier hour,
And the sun has not reached its tower.

On the other hand, the road runs up to Carlisle, city of the woods, which, if it is less civil, is the more natural. It does well hold the earth together. It gets laughed at because it is a small town, I know, but nevertheless it is a place where great men may be born any day, for fair winds and foul blow right on over it without distinction. It has a meeting-house and horse-sheds, a tavern and a blacksmith's shop, for centre, and a good deal of wood to cut and cord yet. And

"Bedford, most noble Bedford,
I shall not thee forget."

History has remembered thee; especially that meek and

humble petition of thy old planters, like the wailing of the Lord's own people, "To the gentlemen, the selectmen" of Concord, praying to be erected into a separate parish. We can hardly credit that so plaintive a psalm resounded but little more than a century ago along these Babylonish waters. "In the extreme difficult seasons of heat and cold," said they, "we were ready to say of the Sabbath, Behold what a weariness is it." "Gentlemen, if our seeking to draw off proceed from any disaffection to our present Reverend Pastor, or the Christian Society with whom we have taken such sweet counsel together, and walked unto the house of God in company, then hear us not this day; but we greatly desire, if God please, to be eased of our burden on the Sabbath, the travel and fatigue thereof, that the word of God may be nigh to us, near to our houses and in our hearts, that we and our little ones may serve the Lord. We hope that God, who stirred up the spirit of Cyrus to set forward temple work, has stirred us up to ask, and will stir you up to grant, the prayer of our petition; so shall your humble petitioners ever pray, as in duty bound" — And so the temple work went forward here to a happy conclusion. Yonder in Carlisle the building of the temple was many wearisome years delayed, not that there was wanting of Shittim wood, or the gold of Ophir, but a site therefor convenient to all the worshipers; whether on "Buttrick's Plain," or rather on "Poplar Hill." It was a tedious question.

In this Billerica solid men must have lived, select from year to year; a series of town clerks, at least; and there are old records that you may search. Some spring the

white man came, built him a house, and made a clearing here, letting in the sun, dried up a farm, piled up the old gray stones in fences, cut down the pines around his dwelling, planted orchard seeds brought from the old country, and persuaded the civil apple-tree to blossom next to the wild pine and the juniper, shedding its perfume in the wilderness. Their old stocks still remain. He culled the graceful elm from out the woods and from the riverside, and so refined and smoothed his village plot. He rudely bridged the stream, and drove his team afield into the river meadows, cut the wild grass, and laid bare the homes of beaver, otter, muskrat, and with the whetting of his scythe scared off the deer and bear. He set up a mill, and fields of English grain sprang in the virgin soil. And with his grain he scattered the seeds of the dandelion and the wild trefoil over the meadows, mingling his English flowers with the wild native ones. The bristling burdock, the sweet-scented catnip, and the humble yarrow planted themselves along his woodland road, they, too, seeking "freedom to worship God" in their way. And thus he plants a town. The white man's mullein soon reigned in Indian corn-fields, and sweet-scented English grasses clothed the new soil. Where, then, could the red man set his foot? The honey-bee hummed through the Massachusetts woods, and sipped the wild-flowers round the Indian's wigwam, perchance unnoticed, when, with prophetic warning, it stung the red child's hand, forerunner of that industrious tribe that was to come and pluck the wild-flower of his race up by the root.

The white man comes, pale as the dawn, with a load

of thought, with a slumbering intelligence as a fire raked up, knowing well what he knows, not guessing but calculating; strong in community, yielding obedience to authority; of experienced race; of wonderful, wonderful common sense; dull but capable, slow but persevering, severe but just, of little humor but genuine; a laboring man, despising game and sport; building a house that endures, a framed house. He buys the Indian's moccasins and baskets, then buys his hunting-grounds, and at length forgets where he is buried and plows up his bones. And here town records, old, tattered, time-worn, weather-stained chronicles, contain the Indian sachem's mark perchance, an arrow or a beaver, and the few fatal words by which he deeded his hunting-grounds away. He comes with a list of ancient Saxon, Norman, and Celtic names, and strews them up and down this river, — Framingham, Sudbury, Bedford, Carlisle, Billerica, Chelmsford, — and this is New Angle-land, and these are the New West Saxons, whom the red men call, not Angle-ish or English, but Yengeese, and so at last they are known for Yankees.

When we were opposite to the middle of Billerica, the fields on either hand had a soft and cultivated English aspect, the village spire being seen over the copses which skirt the river, and sometimes an orchard straggled down to the water-side, though, generally, our course this forenoon was the wildest part of our voyage. It seemed that men led a quiet and very civil life there. The inhabitants were plainly cultivators of the earth, and lived under an organized political government. The schoolhouse stood with a meek aspect, entreating a

long truce to war and savage life. Every one finds by his own experience, as well as in history, that the era in which men cultivate the apple, and the amenities of the garden, is essentially different from that of the hunter and forest life, and neither can displace the other without loss. We have all had our day-dreams, as well as more prophetic nocturnal vision; but as for farming, I am convinced that my genius dates from an older era than the agricultural. I would at least strike my spade into the earth with such careless freedom but accuracy as the woodpecker his bill into a tree. There is in my nature, methinks, a singular yearning toward all wildness. I know of no redeeming qualities in myself but a sincere love for some things, and when I am reproved I fall back on to this ground. What have I to do with plows? I cut another furrow than you see. Where the off ox treads, there is it not, it is farther off; where the nigh ox walks, it will not be, it is nigher still. If corn fails, my crop fails not, and what are drought and rain to me? The rude Saxon pioneer will sometimes pine for that refinement and artificial beauty which are English, and love to hear the sound of such sweet and classical names as the Pentland and Malvern Hills, the Cliffs of Dover and the Trosachs, Richmond, Derwent, and Winandermere, which are to him now instead of the Acropolis and Parthenon, of Baiæ, and Athens, with its sea-walls, and Arcadia and Tempe.

Greece, who am I that should remember thee,
Thy Marathon and thy Thermopylæ?
Is my life vulgar, my fate mean,
Which on these golden memories can lean?

We are apt enough to be pleased with such books as Evelyn's *Sylva*, *Actearium*, and *Kalendarium Hortense*, but they imply a relaxed nerve in the reader. Gardening is civil and social, but it wants the vigor and freedom of the forest and the outlaw. There may be an excess of cultivation as well as of anything else, until civilization becomes pathetic. A highly cultivated man, — all whose bones can be bent! whose heaven-born virtues are but good manners! The young pines springing up in the corn-fields from year to year are to me a refreshing fact. We talk of civilizing the Indian, but that is not the name for his improvement. By the wary independence and aloofness of his dim forest life he preserves his intercourse with his native gods, and is admitted from time to time to a rare and peculiar society with Nature. He has glances of starry recognition to which our saloons are strangers. The steady illumination of his genius, dim only because distant, is like the faint but satisfying light of the stars compared with the dazzling but ineffectual and short-lived blaze of candles. The Society-Islanders had their day-born gods, but they were not supposed to be "of equal antiquity with the *atua fauau po*, or night-born gods." It is true, there are the innocent pleasures of country life, and it is sometimes pleasant to make the earth yield her increase, and gather the fruits in their season; but the heroic spirit will not fail to dream of remoter retirements and more rugged paths. It will have its garden-plots and its *parterres* elsewhere than on the earth, and gather nuts and berries by the way for its subsistence, or orchard fruits with such heedlessness as berries. We would not always be sooth-

ing and taming nature, breaking the horse and the ox, but sometimes ride the horse wild and chase the buffalo. The Indian's intercourse with Nature is at least such as admits of the greatest independence of each. If he is somewhat of a stranger in her midst, the gardener is too much of a familiar. There is something vulgar and foul in the latter's closeness to his mistress, something noble and cleanly in the former's distance. In civilization, as in a southern latitude, man degenerates at length, and yields to the incursion of more northern tribes, —

“Some nation yet shut in
With hills of ice.”

There are other, savager and more primeval aspects of nature than our poets have sung. It is only white man's poetry. Homer and Ossian even can never revive in London or Boston. And yet, behold how these cities are refreshed by the mere tradition, or the imperfectly transmitted fragrance and flavor of these wild fruits. If we could listen but for an instant to the chant of the Indian muse, we should understand why he will not exchange his savageness for civilization. Nations are not whimsical. Steel and blankets are strong temptations; but the Indian does well to continue Indian.

After sitting in my chamber many days, reading the poets, I have been out early on a foggy morning and heard the cry of an owl in a neighboring wood as from a nature behind the common, unexplored by science or by literature. None of the feathered race has yet realized my youthful conceptions of the woodland depths. I had seen the red Election-birds brought from their recesses on my comrades' string, and fancied that their plumage

would assume stranger and more dazzling colors, like the tints of evening, in proportion as I advanced farther into the darkness and solitude of the forest. Still less have I seen such strong and wilderness tints on any poet's string.

These modern ingenious sciences and arts do not affect me as those more venerable arts of hunting and fishing, and even of husbandry in its primitive and simple form; as ancient and honorable trades as the sun and moon and winds pursue, coeval with the faculties of man, and invented when these were invented. We do not know their John Gutenberg, or Richard Arkwright, though the poets would fain make them to have been gradually learned and taught. According to Gower, —

“ And Iadabel, as saith the boke,
 Firste made nette, fishes toke.
 Of huntyng eke he fond the chace,
 Whiche nowe is knowe in many place ;
 A tent of clothe, with corde and stake,
 He sette up first, and did it make.”

Also, Lydgate says: —

“ Jason first sayled, in story it is tolde,
 Toward Colchos, to wynne the flees of golde,
 Ceres the Goddess fond first the tilthe of londe ;

 Also, Aristeus fonde first the usage
 Of mylke, and cruddis, and of honey swote ;
 Peryodes, for grete avauntage,
 From flyntes smote fuyre, daryng in the roote.”

We read that Aristeus “obtained of Jupiter and Neptune, that the pestilential heat of the dog-days, wherein was great mortality, should be mitigated with

wind." This is one of those dateless benefits conferred on man which have no record in our vulgar day, though we still find some similitude to them in our dreams, in which we have a more liberal and juster apprehension of things, unconstrained by habit, which is then in some measure put off, and divested of memory, which we call history.

According to fable, when the island of Ægina was depopulated by sickness, at the instance of Æacus, Jupiter turned the ants into men, that is, as some think, he made men of the inhabitants who lived meanly like ants. This is perhaps the fullest history of those early days extant.

The fable, which is naturally and truly composed, so as to satisfy the imagination, ere it addresses the understanding, beautiful though strange as a wild-flower, is to the wise man an apothegm, and admits of his most generous interpretation. When we read that Bacchus made the Tyrrhenian mariners mad, so that they leaped into the sea, mistaking it for a meadow full of flowers, and so became dolphins, we are not concerned about the historical truth of this, but rather a higher poetical truth. We seem to hear the music of a thought, and care not if the understanding be not gratified. For their beauty, consider the fables of Narcissus, of Endymion, of Memnon son of Morning, the representative of all promising youths who have died a premature death, and whose memory is melodiously prolonged to the latest morning; the beautiful stories of Phaethon, and of the Sirens whose isle shone afar off white with the bones of unburied men;

and the pregnant ones of Pan, Prometheus, and the Sphinx; and that long list of names which have already become part of the universal language of civilized men, and from proper are becoming common names or nouns, — the Sibyls, the Eumenides, the Parcæ, the Graces, the Muses, Nemesis, etc.

It is interesting to observe with what singular unanimity the farthest sundered nations and generations consent to give completeness and roundness to an ancient fable, of which they indistinctly appreciate the beauty or the truth. By a faint and dream-like effort, though it be only by the vote of a scientific body, the dullest posterity slowly add some trait to the mythus. As when astronomers call the lately discovered planet Neptune; or the asteroid Astræa, that the Virgin who was driven from earth to heaven at the end of the golden age may have her local habitation in the heavens more distinctly assigned her, — for the slightest recognition of poetic worth is significant. By such slow aggregation has mythology grown from the first. The very nursery tales of this generation were the nursery tales of primeval races. They migrate from east to west, and again from west to east; now expanded into the “tale divine” of bards, now shrunk into a popular rhyme. This is an approach to that universal language which men have sought in vain. This fond reiteration of the oldest expressions of truth by the latest posterity, content with slightly and religiously retouching the old material, is the most impressive proof of a common humanity.

All nations love the same jests and tales, Jews, Christians, and Mahometans, and the same translated suffice

for all. All men are children, and of one family. The same tale sends them all to bed, and wakes them in the morning. Joseph Wolff, the missionary, distributed copies of Robinson Crusoe, translated into Arabic, among the Arabs, and they made a great sensation. "Robinson Crusoe's adventures and wisdom," says he, "were read by Mahometans in the market-places of Sanaa, Hodyeda, and Loheya, and admired and believed!" On reading the book, the Arabians exclaimed, "Oh, that Robinson Crusoe must have been a great prophet!"

To some extent, mythology is only the most ancient history and biography. So far from being false or fabulous in the common sense, it contains only enduring and essential truth, the I and you, the here and there, the now and then, being omitted. Either time or rare wisdom writes it. Before printing was discovered, a century was equal to a thousand years. The poet is he who can write some pure mythology to-day without the aid of posterity. In how few words, for instance, the Greeks would have told the story of Abelard and Heloise, making but a sentence for our classical dictionary, — and then, perchance, have stuck up their names to shine in some corner of the firmament. We moderns, on the other hand, collect only the raw materials of biography and history, "memoirs to serve for a history," which itself is but materials to serve for a mythology. How many volumes folio would the Life and Labors of Prometheus have filled, if perchance it had fallen, as perchance it did first, in days of cheap printing! Who knows what shape the fable of Columbus will at length assume, to be confounded with that of Jason and the

expedition of the Argonauts. And Franklin, — there may be a line for him in the future classical dictionary, recording what that demigod did, and referring him to some new genealogy. “Son of —— and —— . He aided the Americans to gain their independence, instructed mankind in economy, and drew down lightning from the clouds.”

The hidden significance of these fables which is sometimes thought to have been detected, the ethics running parallel to the poetry and history, are not so remarkable as the readiness with which they may be made to express a variety of truths. As if they were the skeletons of still older and more universal truths than any whose flesh and blood they are for the time made to wear. It is like striving to make the sun, or the wind, or the sea symbols to signify exclusively the particular thoughts of our day. But what signifies it? In the mythus a superhuman intelligence uses the unconscious thoughts and dreams of men as its hieroglyphics to address men unborn. In the history of the human mind, these glowing and ruddy fables precede the noonday thoughts of men, as Aurora the sun’s rays. The matutine intellect of the poet, keeping in advance of the glare of philosophy, always dwells in this auroral atmosphere.

As we said before, the Concord is a dead stream, but its scenery is the more suggestive to the contemplative voyager, and this day its water was fuller of reflections than our pages even. Just before it reaches the falls in Billerica, it is contracted, and becomes swifter and shallower, with a yellow pebbly bottom, hardly passable for a

canal-boat, leaving the broader and more stagnant portion above like a lake among the hills. All through the Concord, Bedford, and Billerica meadows we had heard no murmur from its stream, except where some tributary runnel tumbled in, —

Some tumultuous little rill,
Purling round its storied pebble,
Tinkling to the selfsame tune,
From September until June,
Which no drought doth e'er enfeeble.

Silent flows the parent stream,
And if rocks do lie below,
Smothers with her waves the din,
As it were a youthful sin,
Just as still, and just as slow.

But now at length we heard this staid and primitive river rushing to her fall, like any rill. We here left its channel, just above the Billerica Falls, and entered the canal, which runs, or rather is conducted, six miles through the woods to the Merrimack, at Middlesex; and as we did not care to loiter in this part of our voyage, while one ran along the tow-path drawing the boat by a cord, the other kept it off the shore with a pole, so that we accomplished the whole distance in little more than an hour. This canal, which is the oldest in the country, and has even an antique look beside the more modern railroads, is fed by the Concord, so that we were still floating on its familiar waters. It is so much water which the river *lets* for the advantage of commerce. There appeared some want of harmony in its scenery, since it was not of equal date with the woods and meadows through which it is led, and we missed the conciliatory

influence of time on land and water; but in the lapse of ages, Nature will recover and indemnify herself, and gradually plant fit shrubs and flowers along its borders. Already the kingfisher sat upon a pine over the water, and the bream and pickerel swam below. Thus all works pass directly out of the hands of the architect into the hands of Nature, to be perfected.

It was a retired and pleasant route, without houses or travelers, except some young men who were lounging upon a bridge in Chelmsford, who leaned impudently over the rails to pry into our concerns, but we caught the eye of the most forward, and looked at him till he was visibly discomfited. Not that there was any peculiar efficacy in our look, but rather a sense of shame left in him which disarmed him.

It is a very true and expressive phrase, "He looked daggers at me," for the first pattern and prototype of all daggers must have been a glance of the eye. First, there was the glance of Jove's eye, then his fiery bolt; then, the material gradually hardening, tridents, spears, javelins; and finally, for the convenience of private men, daggers, krisses, and so forth, were invented. It is wonderful how we get about the streets without being wounded by these delicate and glancing weapons, a man can so nimbly whip out his rapier, or without being noticed carry it unsheathed. Yet it is rare that one gets seriously looked at.

As we passed under the last bridge over the canal, just before reaching the Merrimack, the people coming out of church paused to look at us from above, and apparently, so strong is custom, indulged in some

heathenish comparisons; but we were the truest observers of this sunny day. According to Hesiod, —

“The seventh is a holy day,

For then Latona brought forth golden-rayed Apollo,”

and by our reckoning this was the seventh day of the week, and not the first. I find among the papers of an old Justice of the Peace and Deacon of the town of Concord, this singular memorandum, which is worth preserving as a relic of an ancient custom. After reforming the spelling and grammar, it runs as follows: “Men that traveled with teams on the Sabbath, December 18, 1803, were Jeremiah Richardson and Jonas Parker, both of Shirley. They had teams with rigging such as is used to carry barrels, and they were traveling westward. Richardson was questioned by the Hon. Ephraim Wood, Esq., and he said that Jonas Parker was his fellow-traveler, and he further said that a Mr. Longley was his employer, who promised to bear him out.” We were the men that were gliding northward, this September 1, 1839, with still team, and rigging not the most convenient to carry barrels, unquestioned by any squire or church deacon, and ready to bear ourselves out if need were. In the latter part of the seventeenth century, according to the historian of Dunstable, “Towns were directed to erect ‘*a cage*’ near the meeting-house, and in this all offenders against the sanctity of the Sabbath were confined.” Society has relaxed a little from its strictness, one would say, but I presume that there is not less *religion* than formerly. If the *ligature* is found to be loosened in one part, it is only drawn the tighter in another.

You can hardly convince a man of an error in a lifetime, but must content yourself with the reflection that the progress of science is slow. If he is not convinced, his grandchildren may be. The geologists tell us that it took one hundred years to prove that fossils are organic, and one hundred and fifty more to prove that they are not to be referred to the Noachian deluge. I am not sure but I should betake myself in extremities to the liberal divinities of Greece, rather than to my country's God. Jehovah, though with us he has acquired new attributes, is more absolute and unapproachable, but hardly more divine, than Jove. He is not so much of a gentleman, not so gracious and catholic, he does not exert so intimate and genial an influence on nature, as many a god of the Greeks. I should fear the infinite power and inflexible justice of the almighty mortal hardly as yet apotheosized, so wholly masculine, with no sister Juno, no Apollo, no Venus, nor Minerva, to intercede for me, *θυμῷ φιλέουσά τε, κηδομένη τε*. The Grecian are youthful and erring and fallen gods, with the vices of men, but in many important respects essentially of the divine race. In my Pantheon, Pan still reigns in his pristine glory, with his ruddy face, his flowing beard, and his shaggy body, his pipe and his crook, his nymph Echo, and his chosen daughter Iambe; for the great god Pan is not dead, as was rumored. No god ever dies. Perhaps of all the gods of New England and of ancient Greece, I am most constant at his shrine.

It seems to me that the god that is commonly worshiped in civilized countries is not at all divine, though he bears a divine name, but is the overwhelming author-

ity and respectability of mankind combined. Men reverence one another, not yet God. If I thought that I could speak with discrimination and impartiality of the nations of Christendom, I should praise them, but it tasks me too much. They seem to be the most civil and humane, but I may be mistaken. Every people have gods to suit their circumstances; the Society Islanders had a god called Toahitu, "in shape like a dog; he saved such as were in danger of falling from rocks and trees." I think that we can do without him, as we have not much climbing to do. Among them a man could make himself a god out of a piece of wood in a few minutes, which would frighten him out of his wits.

I fancy that some indefatigable spinster of the old school, who had the supreme felicity to be born in "days that tried men's souls," hearing this, may say with Nestor, another of the old school, "But you are younger than I. For time was when I conversed with greater men than you. For not at any time have I seen such men, nor shall see them, as Perithous, and Dryas, and ποιμένα λαών," that is probably Washington, sole "Shepherd of the People." And when Apollo has now six times rolled westward, or seemed to roll, and now for the seventh time shows his face in the east, eyes wellnigh glazed, long glassed, which have fluctuated only between lamb's wool and worsted, explore ceaselessly some good sermon book. For six days shalt thou labor and do all thy knitting, but on the seventh, forsooth, thy reading. Happy we who can bask in this warm September sun, which illumines all creatures, as well when they rest as when they toil, not without a feeling of gratitude; whose life is

as blameless, how blameworthy soever it may be, on the Lord's Mona-day as on his Suna-day.

There are various, nay, incredible faiths; why should we be alarmed at any of them? What man believes, God believes. Long as I have lived, and many blasphemers as I have heard and seen, I have never yet heard or witnessed any direct and conscious blasphemy or irreverence; but of indirect and habitual, enough. Where is the man who is guilty of direct and personal insolence to Him that made him?

One memorable addition to the old mythology is due to this era, — the Christian fable. With what pains, and tears, and blood these centuries have woven this and added it to the mythology of mankind! The new Prometheus. With what miraculous consent, and patience, and persistency has this mythus been stamped on the memory of the race! It would seem as if it were in the progress of our mythology to dethrone Jehovah, and crown Christ in his stead.

If it is not a tragical life we live, then I know not what to call it. Such a story as that of Jesus Christ, — the history of Jerusalem, say, being a part of the Universal History. The naked, the embalmed, unburied death of Jerusalem amid its desolate hills, — think of it. In Tasso's poem I trust some things are sweetly buried. Consider the snappish tenacity with which they preach Christianity still. What are time and space to Christianity, eighteen hundred years, and a new world? — that the humble life of a Jewish peasant should have force to make a New York bishop so bigoted. Forty-four lamps, the gift of kings, now burning in a place called

the Holy Sepulchre; a church-bell ringing; some unaffected tears shed by a pilgrim on Mount Calvary within the week.

“Jerusalem, Jerusalem, when I forget thee, may my right hand forget her cunning.”

“By the waters of Babylon there we sat down, and we wept when we remembered Zion.”

I trust that some may be as near and dear to Buddha, or Christ, or Swedenborg, who are without the pale of their churches. It is necessary not to be Christian to appreciate the beauty and significance of the life of Christ. I know that some will have hard thoughts of me, when they hear their Christ named beside my Buddha, yet I am sure that I am willing they should love their Christ more than my Buddha, for the love is the main thing, and I like him too. “God is the letter Ku, as well as Khu.” Why need Christians be still intolerant and superstitious? The simple-minded sailors were unwilling to cast overboard Jonah at his own request.

“Where is this love become in later age?
Alas! ’t is gone in endless pilgrimage
From hence, and never to return, I doubt,
Till revolution wheel those times about.”

One man says, —

“The worlde ’s a popular disease, that reigns
Within the froward heart and frantic brains
Of poor distempered mortals.”

Another, that

“all the world ’s a stage,
And all the men and women merely players.”

The world is a strange place for a playhouse to stand

within it. Old Drayton thought that a man that lived here, and would be a poet, for instance, should have in him certain "brave, translunary things," and a "fine madness" should possess his brain. Certainly it were as well, that he might be up to the occasion. That is a superfluous wonder, which Dr. Johnson expresses at the assertion of Sir Thomas Browne that "his life has been a miracle of thirty years, which to relate were not history but a piece of poetry, and would sound like a fable." The wonder is, rather, that all men do not assert as much. That would be a rare praise, if it were true, which was addressed to Francis Beaumont, — "Spectators sate part in your tragedies."

Think what a mean and wretched place this world is; that half the time we have to light a lamp that we may see to live in it. This is half our life. Who would undertake the enterprise if it were all? And, pray, what more has day to offer? A lamp that burns more clear, a purer oil, say winter-strained, that so we may pursue our idleness with less obstruction. Bribed with a little sunlight and a few prismatic tints, we bless our Maker, and stave off his wrath with hymns.

I make ye an offer,
Ye gods, hear the scoffer,
The scheme will not hurt you,
If ye will find goodness, I will find virtue.
Though I am your creature,
And child of your nature,
I have pride still unbended,
And blood undescended,
Some free independence,
And my own descendants.

I cannot toil blindly,
Though ye behave kindly,
And I swear by the rood,
I'll be slave to no God.
If ye will deal plainly,
I will strive mainly,
If ye will discover,
Great plans to your lover,
And give him a sphere
Somewhat larger than here.

“Verily, my angels! I was abashed on account of my servant, who had no Providence but me; therefore did I pardon him.”¹

Most people with whom I talk, men and women even of some originality and genius, have their scheme of the universe all cut and dried, — very *dry*, I assure you, to hear, dry enough to burn, dry-rotted and powder-post, methinks, — which they set up between you and them in the shortest intercourse; an ancient and tottering frame with all its boards blown off. They do not walk without their bed. Some, to me, seemingly very unimportant and unsubstantial things and relations are for them everlastingly settled, — as Father, Son, and Holy Ghost, and the like. These are like the everlasting hills to them. But in all my wanderings I never came across the least vestige of authority for these things. They have not left so distinct a trace as the delicate flower of a remote geological period on the coal in my grate. The wisest man preaches no doctrines; he has no scheme; he sees no rafter, not even a cobweb, against the heavens.

¹ *The Gulistan* of Sadi.

It is clear sky. If I ever see more clearly at one time than at another, the medium through which I see is clearer. To see from earth to heaven, and see there standing, still a fixture, that old Jewish scheme! What right have you to hold up this obstacle to my understanding you, to your understanding me! You did not invent it; it was imposed on you. Examine your authority. Even Christ, we fear, had his scheme, his conformity to tradition, which slightly vitiates his teaching. He had not swallowed all formulas. He preached some mere doctrines. As for me, Abraham, Isaac, and Jacob are now only the subtilest imaginable essences, which would not stain the morning sky. Your scheme must be the framework of the universe; all other schemes will soon be ruins. The perfect God in his revelations of himself has never got to the length of one such proposition as you, his prophets, state. Have you learned the alphabet of heaven and can count three? Do you know the number of God's family? Can you put mysteries into words? Do you presume to fable of the ineffable? Pray, what geographer are you, that speak of heaven's topography? Whose friend are you, that speak of God's personality? Do you, Miles Howard, think that he has made you his confidant? Tell me of the height of the mountains of the moon, or of the diameter of space, and I may believe you, but of the secret history of the Almighty, and I shall pronounce thee mad. Yet we have a sort of family history of our God, — so have the Tahitians of theirs, — and some old poet's grand imagination is imposed on us as adamantine everlasting truth, and God's own word. Pythagoras says, truly enough, "A true as-

sertion respecting God is an assertion of God;" but we may well doubt if there is any example of this in literature.

The New Testament is an invaluable book, though I confess to having been slightly prejudiced against it in my very early days by the church and the Sabbath-school, so that it seemed, before I read it, to be the yellowest book in the catalogue. Yet I early escaped from their meshes. It was hard to get the commentaries out of one's head and taste its true flavor. I think that *Pilgrim's Progress* is the best sermon which has been preached from this text; almost all other sermons that I have heard, or heard of, have been but poor imitations of this. It would be a poor story to be prejudiced against the *Life of Christ* because the book has been edited by Christians. In fact, I love this book rarely, though it is a sort of castle in the air to me, which I am permitted to dream. Having come to it so recently and freshly, it has the greater charm, so that I cannot find any to talk with about it. I never read a novel, they have so little real life and thought in them. The reading which I love best is the scriptures of the several nations, though it happens that I am better acquainted with those of the Hindoos, the Chinese, and the Persians, than of the Hebrews, which I have come to last. Give me one of these bibles, and you have silenced me for a while. When I recover the use of my tongue, I am wont to worry my neighbors with the new sentences; but commonly they cannot see that there is any wit in them. Such has been my experience with the New Testament. I have not yet got to the crucifixion, I have read it over so many times. I should

love dearly to read it aloud to my friends, some of whom are seriously inclined; it is so good, and I am sure that they have never heard it, it fits their case exactly, and we should enjoy it so much together, — but I instinctively despair of getting their ears. They soon show, by signs not to be mistaken, that it is inexpressibly wearisome to them. I do not mean to imply that I am any better than my neighbors; for, alas! I know that I am only as good, though I love better books than they.

It is remarkable that, notwithstanding the universal favor with which the New Testament is outwardly received, and even the bigotry with which it is defended, there is no hospitality shown to, there is no appreciation of, the order of truth with which it deals. I know of no book that has so few readers. There is none so truly strange, and heretical, and unpopular. To Christians, no less than Greeks and Jews, it is foolishness and a stumbling-block. There are, indeed, severe things in it which no man should read aloud more than once. "Seek first the kingdom of heaven." "Lay not up for yourselves treasures on earth." "If thou wilt be perfect, go and sell that thou hast, and give to the poor, and thou shalt have treasure in heaven." "For what is a man profited, if he shall gain the whole world, and lose his own soul? Or what shall a man give in exchange for his soul?" Think of this, Yankees! "Verily, I say unto you, if ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place, and it shall remove; and nothing shall be impossible unto you." Think of repeating these things to a New England audience! thirdly, fourthly, fifteenthly, till there

are three barrels of sermons! who, without cant, can read them aloud? Who, without cant, can hear them, and not go out of the meeting-house? They never *were* read, they never *were* heard. Let but one of these sentences be rightly read, from any pulpit in the land, and there would not be left one stone of that meeting-house upon another.

Yet the New Testament treats of man and man's so-called spiritual affairs too exclusively, and is too constantly moral and personal, to alone content me, who am not interested solely in man's religious or moral nature, or in man even. I have not the most definite designs on the future. Absolutely speaking, Do unto others as you would that they should do unto you is by no means a golden rule, but the best of current silver. An honest man would have but little occasion for it. It is golden not to have any rule at all in such a case. The book has never been written which is to be accepted without any allowance. Christ was a sublime actor on the stage of the world. He knew what he was thinking of when he said, "Heaven and earth shall pass away, but my words shall not pass away." I draw near to him at such a time. Yet he taught mankind but imperfectly how to live; his thoughts were all directed toward another world. There is another kind of success than his. Even here we have a sort of living to get, and must buffet it somewhat longer. There are various tough problems yet to solve, and we must make shift to live, betwixt spirit and matter, such a human life as we can.

A healthy man, with steady employment, as wood-chopping at fifty cents a cord, and a camp in the woods,

will not be a good subject for Christianity. The New Testament may be a choice book to him on some, but not on all or most of his days. He will rather go a-fishing in his leisure hours. The Apostles, though they were fishers too, were of the solemn race of sea-fishers, and never trolled for pickerel on inland streams.

Men have a singular desire to be good without being good for anything, because, perchance, they think vaguely that so it will be good for them in the end. The sort of morality which the priests inculcate is a very subtle policy, far finer than the politicians', and the world is very successfully ruled by them as the policemen. It is not worth the while to let our imperfections disturb us always. The conscience really does not, and ought not to monopolize the whole of our lives, any more than the heart or the head. It is as liable to disease as any other part. I have seen some whose consciences, owing undoubtedly to former indulgence, had grown to be as irritable as spoilt children, and at length gave them no peace. They did not know when to swallow their cud, and their lives of course yielded no milk.

Conscience is instinct bred in the house;
Feeling and Thinking propagate the sin
By an unnatural breeding in and in.
I say, Turn it outdoors,
Into the moors.
I love a life whose plot is simple,
And does not thicken with every pimple,
A soul so sound no sickly conscience binds it,
That makes the universe no worse than 't finds it.
I love an earnest soul,
Whose mighty joy and sorrow

Are not drowned in a bowl,
 And brought to life to-morrow;
 That lives one tragedy,
 And not seventy;
 A conscience worth keeping,
 Laughing not weeping;
 A conscience wise and steady,
 And forever ready;
 Not changing with events,
 Dealing in compliments;
 A conscience exercised about
 Large things, where one *may* doubt.
 I love a soul not all of wood,
 Predestinated to be good,
 But true to the backbone
 Unto itself alone,
 And false to none;
 Born to its own affairs,
 Its own joys and own cares;
 By whom the work which God begun
 Is finished, and not undone;
 Taken up where he left off,
 Whether to worship or to scoff:
 If not good, why then evil,
 If not good god, good devil.
 Goodness! — you hypocrite, come out of that,
 Live your life, do your work, then take your hat.
 I have no patience towards
 Such conscientious cowards.
 Give me simple laboring folk,
 Who love their work,
 Whose virtue is a song
 To cheer God along.

I was once reproved by a minister who was driving
 a poor beast to some meeting-house horse-sheds among
 the hills of New Hampshire, because I was bending
 my steps to a mountain-top on the Sabbath, instead of a

church, when I would have gone farther than he to hear a true word spoken on that or any day. He declared that I was "breaking the Lord's fourth commandment," and proceeded to enumerate, in a sepulchral tone, the disasters which had befallen him whenever he had done any ordinary work on the Sabbath. He really thought that a god was on the watch to trip up those men who followed any secular work on this day, and did not see that it was the evil conscience of the workers that did it. The country is full of this superstition, so that when one enters a village the church, not only really but from association, is the ugliest looking building in it, because it is the one in which human nature stoops the lowest and is most disgraced. Certainly, such temples as these shall ere long cease to deform the landscape. There are few things more disheartening and disgusting than when you are walking the streets of a strange village on the Sabbath, to hear a preacher shouting like a boatswain in a gale of wind, and thus harshly profaning the quiet atmosphere of the day. You fancy him to have taken off his coat, as when men are about to do hot and dirty work.

If I should ask the minister of Middlesex to let me speak in his pulpit on a Sunday, he would object because I do not pray as he does, or because I am not ordained. What under the sun are these things?

Really, there is no infidelity, nowadays, so great as that which prays, and keeps the Sabbath, and rebuilds the churches. The sealer of the South Pacific preaches a truer doctrine. The church is a sort of hospital for men's souls, and as full of quackery as the hospital for

their bodies. Those who are taken into it live like pensioners in their Retreat or Sailor's Snug Harbor, where you may see a row of religious cripples sitting outside in sunny weather. Let not the apprehension that he may one day have to occupy a ward therein discourage the cheerful labors of the able-souled man. While he remembers the sick in their extremities, let him not look thither as to his goal. One is sick at heart of this pagoda worship. It is like the beating of gongs in a Hindoo subterranean temple. In dark places and dungeons the preacher's words might perhaps strike root and grow, but not in broad daylight in any part of the world that I know. The sound of the Sabbath bell far away, now breaking on these shores, does not awaken pleasing associations, but melancholy and sombre ones rather. One involuntarily rests on his oar, to humor his unusually meditative mood. It is as the sound of many catechisms and religious books twanging a canting peal round the earth, seeming to issue from some Egyptian temple and echo along the shore of the Nile, right opposite to Pharaoh's palace and Moses in the bulrushes, startling a multitude of storks and alligators basking in the sun.

Everywhere "good men" sound a retreat, and the word has gone forth to fall back on innocence. Fall forward rather on to whatever there is there. Christianity only hopes. It has hung its harp on the willows, and cannot sing a song in a strange land. It has dreamed a sad dream, and does not yet welcome the morning with joy. The mother tells her falsehoods to her child, but, thank Heaven, the child does not grow up in its parent's

shadow. Our mother's faith has not grown with her experience. Her experience has been too much for her. The lesson of life was too hard for her to learn.

It is remarkable that almost all speakers and writers feel it to be incumbent on them, sooner or later, to prove or to acknowledge the personality of God. Some Earl of Bridgewater, thinking it better late than never, has provided for it in his will. It is a sad mistake. In reading a work on agriculture, we have to skip the author's moral reflections, and the words "Providence" and "He" scattered along the page, to come at the profitable level of what he has to say. What he calls his religion is for the most part offensive to the nostrils. He should know better than expose himself, and keep his foul sores covered till they are quite healed. There is more religion in men's science than there is science in their religion. Let us make haste to the report of the committee on swine.

A man's real faith is never contained in his creed, nor is his creed an article of his faith. The last is never adopted. This it is that permits him to smile ever, and to live even as bravely as he does. And yet he clings anxiously to his creed, as to a straw, thinking that that does him good service because his sheet anchor does not drag.

In most men's religion, the ligature which should be its umbilical cord connecting them with divinity is rather like that thread which the accomplices of Cylon held in their hands when they went abroad from the temple of Minerva, the other end being attached to the statue of the goddess. But frequently, as in their case, the thread breaks, being stretched, and they are left without an asylum.

“A good and pious man reclined his head on the bosom of contemplation, and was absorbed in the ocean of a revery. At the instant when he awaked from his vision, one of his friends, by way of pleasantry, said, What rare gift have you brought us from that garden, where you have been recreating? He replied, I fancied to myself and said, when I can reach the rose-bower, I will fill my lap with the flowers, and bring them as a present to my friends; but when I got there, the fragrance of the roses so intoxicated me, that the skirt dropped from my hands. —— ‘O bird of dawn! learn the warmth of affection from the moth; for that scorched creature gave up the ghost, and uttered not a groan: These vain pretenders are ignorant of him they seek after; for of him that knew him we never heard again: — O thou! who towerest above the flights of conjecture, opinion, and comprehension; whatever has been reported of thee we have heard and read; the congregation is dismissed, and life drawn to a close; and we still rest at our first encomium of thee!’”¹

By noon we were let down into the Merrimack through the locks at Middlesex, just above Pawtucket Falls, by a serene and liberal-minded man, who came quietly from his book, though his duties, we supposed, did not require him to open the locks on Sundays. With him we had a just and equal encounter of the eyes, as between two honest men.

The movements of the eyes express the perpetual and unconscious courtesy of the parties. It is said that a

¹ Sadi.

rogue does not look you in the face, neither does an honest man look at you as if he had his reputation to establish. I have seen some who did not know when to turn aside their eyes in meeting yours. A truly confident and magnanimous spirit is wiser than to contend for the mastery in such encounters. Serpents alone conquer by the steadiness of their gaze. My friend looks me in the face and sees me, that is all.

The best relations were at once established between us and this man, and though few words were spoken, he could not conceal a visible interest in us and our excursion. He was a lover of the higher mathematics, as we found, and in the midst of some vast sunny problem, when we overtook him and whispered our conjectures. By this man we were presented with the freedom of the Merrimack. We now felt as if we were fairly launched on the ocean stream of our voyage, and were pleased to find that our boat would float on Merrimack water. We began again busily to put in practice those old arts of rowing, steering, and paddling. It seemed a strange phenomenon to us that the two rivers should mingle their waters so readily, since we had never associated them in our thoughts.

As we glided over the broad bosom of the Merrimack, between Chelmsford and Dracut, at noon, here a quarter of a mile wide, the rattling of our oars was echoed over the water to those villages, and their slight sounds to us. Their harbors lay as smooth and fairy-like as the Lida, or Syracuse, or Rhodes, in our imagination, while, like some strange roving craft, we flitted past what seemed the dwellings of noble home-staying men, seemingly as

conspicuous as if on an eminence, or floating upon a tide which came up to those villagers' breasts. At a third of a mile over the water we heard distinctly some children repeating their catechism in a cottage near the shore, while in the broad shallows between, a herd of cows stood lashing their sides, and waging war with the flies.

Two hundred years ago, other catechizing than this was going on here; for here came the Sachem Wannalancet and his people, and sometimes Tahatawan, our Concord Sachem, who afterwards had a church at home, to catch fish at the falls; and here also came John Eliot, with the Bible and Catechism, and Baxter's "Call to the Unconverted," and other tracts, done into the Massachusetts tongue, and taught them Christianity meanwhile. "This place" says Gookin, referring to Wamesit, "being an ancient and capital seat of Indians, they come to fish; and this good man takes this opportunity to spread the net of the gospel, to fish for their souls." "May 5, 1674," he continues, "according to our usual custom, Mr. Eliot and myself took our journey to Wamesit, or Pawtuckett; and arriving there that evening, Mr. Eliot preached to as many of them as could be got together, out of Matt. xxii. 1-14, the parable of the marriage of the king's son. We met at the wigwam of one called Wannalancet, about two miles from the town, near Pawtuckett falls, and bordering upon Merrimak river. This person, Wannalancet, is the eldest son of old Pasaconaway, the chiefest sachem of Pawtuckett. He is a sober and grave person, and of years, between fifty and sixty. He hath been always loving and friendly

to the English." As yet, however, they had not prevailed on him to embrace the Christian religion. "But at this time," says Gookin, "May 6, 1674," — "after some deliberation and serious pause, he stood up, and made a speech to this effect: 'I must acknowledge I have, all my days, used to pass in an old canoe, [alluding to his frequent custom to pass in a canoe upon the river,] and now you exhort me to change and leave my old canoe, and embark in a new canoe, to which I have hitherto been unwilling; but now I yield up myself to your advice, and enter into a new canoe, and do engage to pray to God hereafter.'" One "Mr. Richard Daniel, a gentleman that lived in Billerica," who with other "persons of quality" was present, "desired brother Eliot to tell the sachem from him, that it may be, while he went in his old canoe, he passed in a quiet stream; but the end thereof was death and destruction to soul and body. But now he went into a new canoe, perhaps he would meet with storms and trials, but yet he should be encouraged to persevere, for the end of his voyage would be everlasting rest." "Since that time, I hear this sachem doth persevere, and is a constant and diligent hearer of God's word, and sanctifieth the Sabbath, though he doth travel to Wamesit meeting every Sabbath, which is above two miles; and though sundry of his people have deserted him, since he subjected to the gospel, yet he continues and persists."¹

Already, as appears from the records, "At a General Court held at Boston in New England, the 7th of the first month, 1643-44," "Wassamequin, Nashoonon,

¹ Gookin's *Hist. Coll. of the Indians in New England*, 1674.

Kutchamaquin, Massaconomet, and Squaw Sachem, did voluntarily submit themselves "to the English; and among other things did "promise to be willing from time to time to be instructed in the knowledge of God." Being asked "not to do any unnecessary work on the Sabbath day, especially within the gates of Christian towns," they answered, "It is easy to them; they have not much to do on any day, and they can well take their rest on that day." "So," says Winthrop, in his Journal, "we causing them to understand the articles, and all the ten commandments of God, and they freely assenting to all, they were solemnly received, and then presented the Court with twenty-six fathom more of wampom; and the Court gave each of them a coat of two yards of cloth, and their dinner; and to them and their men, every of them, a cup of sack at their departure; so they took leave and went away."

What journeys on foot and on horseback through the wilderness, to preach the gospel to these minks and muskrats! who first, no doubt, listened with their red ears out of a natural hospitality and courtesy, and afterward from curiosity or even interest, till at length there "were praying Indians," and, as the General Court wrote to Cromwell, the "work is brought to this perfection that some of the Indians themselves can pray and prophesy in a comfortable manner."

It was in fact an old battle and hunting ground through which we had been floating, the ancient dwelling-place of a race of hunters and warriors. Their weirs of stone, their arrowheads and hatchets, their pestles, and the mortars in which they pounded Indian corn

before the white man had tasted it, lay concealed in the mud of the river bottom. Tradition still points out the spots where they took fish in the greatest numbers, by such arts as they possessed. It is a rapid story the historian will have to put together. Miantonimo, — Winthrop, — Webster. Soon he comes from Montaup to Bunker Hill, from bear-skins, parched corn, bows and arrows, to tiled roofs, wheat-fields, guns and swords. Pawtucket and Wamesit, where the Indians resorted in the fishing season, are now Lowell, the city of spindles and Manchester of America, which sends its cotton cloth round the globe. Even we youthful voyagers had spent a part of our lives in the village of Chelmsford, when the present city, whose bells we heard, was its obscure north district only, and the giant weaver was not yet fairly born. So old are we; so young is it.

We were thus entering the State of New Hampshire on the bosom of the flood formed by the tribute of its innumerable valleys. The river was the only key which could unlock its maze, presenting its hills and valleys, its lakes and streams, in their natural order and position. The Merrimack, or Sturgeon River, is formed by the confluence of the Pemigewasset, which rises near the Notch of the White Mountains, and the Winnipiseogee, which drains the lake of the same name, signifying "The Smile of the Great Spirit." From their junction it runs south seventy-eight miles to Massachusetts, and thence east thirty-five miles to the sea. I have traced its stream from where it bubbles out of the rocks of the White Mountains above the clouds, to where it is lost amid the

salt billows of the ocean on Plum Island beach. At first it comes on murmuring to itself by the base of stately and retired mountains, through moist primitive woods whose juices it receives, where the bear still drinks it, and the cabins of settlers are far between, and there are few to cross its stream; enjoying in solitude its cascades still unknown to fame; by long ranges of mountains of Sandwich and of Squam, slumbering like tumuli of Titans, with the peaks of Moose-hillock, the Haystack, and Kearsarge reflected in its waters; where the maple and the raspberry, those lovers of the hills, flourish amid temperate dews; — flowing long and full of meaning, but untranslatable as its name Pemigewasset, by many a pastured Pelion and Ossa, where unnamed muses haunt, tended by Oreads, Dryads, Naiads, and receiving the tribute of many an untasted Hippocrene. There are earth, air, fire, and water, — very well, this is water and down it comes.

Such water do the gods distill,
And pour down every hill
For their New England men;
A draught of this wild nectar bring,
And I'll not taste the spring
Of Helicon again.

Falling all the way, and yet not discouraged by the lowest fall. By the law of its birth never to become stagnant, for it has come out of the clouds, and down the sides of precipices worn in the flood, through beaver-dams broke loose, not splitting but splicing and mending itself, until it found a breathing-place in this low land. There is no danger now that the sun will steal it back

to heaven again before it reach the sea, for it has a warrant even to recover its own dews into its bosom again with interest at every eve.

It was already the water of Squam and Newfound Lake and Winnipiseogee, and White Mountain snow dissolved, on which we were floating, and Smith's and Baker's and Mad Rivers, and Nashua and Souhegan and Piscataquoag, and Suncook and Soucook and Contoocook, mingled in incalculable proportions, still fluid, yellowish, restless all, with an ancient, ineradicable inclination to the sea.

So it flows on down by Lowell and Haverhill, at which last place it first suffers a sea change, and a few masts betray the vicinity of the ocean. Between the towns of Amesbury and Newbury it is a broad, commercial river, from a third to half a mile in width, no longer skirted with yellow and crumbling banks, but backed by high green hills and pastures, with frequent white beaches on which the fishermen draw up their nets. I have passed down this portion of the river in a steamboat, and it was a pleasant sight to watch from its deck the fishermen dragging their seines on the distant shore, as in pictures of a foreign strand. At intervals you may meet with a schooner laden with lumber, standing up to Haverhill, or else lying at anchor or aground, waiting for wind or tide; until, at last, you glide under the famous Chain Bridge, and are landed at Newburyport. Thus she who at first was "poore of waters, naked of renowne," having received so many fair tributaries, as was said of the Forth, —

"Doth grow the greater still, the further downe;
Till that abounding both in power and fame,
She long doth strive to give the sea her name;"

or if not her name, in this case, at least the impulse of her stream. From the steeples of Newburyport you may review this river stretching far up into the country, with many a white sail glancing over it like an inland sea, and behold, as one wrote who was born on its head-waters, "Down out at its mouth, the dark inky main blending with the blue above. Plum Island, its sand ridges scoloping along the horizon like the sea-serpent, and the distant outline broken by many a tall ship, leaning, *still*, against the sky."

Rising at an equal height with the Connecticut, the Merrimack reaches the sea by a course only half as long, and hence has no leisure to form broad and fertile meadows, like the former, but is hurried along rapids, and down numerous falls, without long delay. The banks are generally steep and high, with a narrow interval reaching back to the hills, which is only rarely or partially overflowed at present, and is much valued by the farmers. Between Chelmsford and Concord, in New Hampshire, it varies from twenty to seventy-five rods in width. It is probably wider than it was formerly, in many places, owing to the trees having been cut down, and the consequent wasting away of its banks. The influence of the Pawtucket Dam is felt as far up as Cromwell's Falls, and many think that the banks are being abraded and the river filled up again by this cause. Like all our rivers, it is liable to freshets, and the Pemigewasset has been known to rise twenty-five feet in a few

hours. It is navigable for vessels of burden about twenty miles; for canal-boats, by means of locks, as far as Concord in New Hampshire, about seventy-five miles from its mouth; and for smaller boats to Plymouth, one hundred and thirteen miles. A small steamboat once plied between Lowell and Nashua, before the railroad was built, and one now runs from Newburyport to Haverhill.

Unfitted to some extent for the purposes of commerce by the sand-bar at its mouth, see how this river was devoted from the first to the service of manufactures. Issuing from the iron region of Franconia, and flowing through still uncut forests, by inexhaustible ledges of granite, with Squam, and Winnipiseogee, and Newfound, and Massabesic Lakes for its mill-ponds, it falls over a succession of natural dams, where it has been offering its *privileges* in vain for ages, until at last the Yankee race came to *improve* them. Standing at its mouth, look up its sparkling stream to its source, — a silver cascade which falls all the way from the White Mountains to the sea, — and behold a city on each successive plateau, a busy colony of human beaver around every fall. Not to mention Newburyport and Haverhill, see Lawrence, and Lowell, and Nashua, and Manchester, and Concord, gleaming one above the other. When at length it has escaped from under the last of the factories, it has a level and unmolested passage to the sea, a mere *waste water*, as it were, bearing little with it but its fame; its pleasant course revealed by the morning fog which hangs over it, and the sails of the few small vessels which transact the commerce of Haverhill and

Newburyport. But its real vessels are railroad cars, and its true and main stream, flowing by an iron channel farther south, may be traced by a long line of vapor amid the hills, which no morning wind ever disperses, to where it empties into the sea at Boston. This side is the louder murmur now. Instead of the scream of a fish hawk scaring the fishes, is heard the whistle of the steam-engine, arousing a country to its progress.

This river too was at length discovered by the white man, "trending up into the land," he knew not how far, possibly an inlet to the South Sea. Its valley, as far as the Winnipiseogee, was first surveyed in 1652. The first settlers of Massachusetts supposed that the Connecticut, in one part of its course, ran northwest, "so near the great lake as the Indians do pass their canoes into it over land." From which lake and the "hideous swamps" about it, as they supposed, came all the beaver that was traded between Virginia and Canada, — and the Potomac was thought to come out of or from very near it. Afterward the Connecticut came so near the course of the Merrimack that, with a little pains, they expected to divert the current of the trade into the latter river, and its profits from their Dutch neighbors into their own pockets.

Unlike the Concord, the Merrimack is not a dead but a living stream, though it has less life within its waters and on its banks. It has a swift current, and, in this part of its course, a clayey bottom, almost no weeds, and comparatively few fishes. We looked down into its yellow water with the more curiosity, who were accustomed

to the Nile-like blackness of the former river. Shad and alewives are taken here in their season, but salmon, though at one time more numerous than shad, are now more rare. Bass, also, are taken occasionally; but locks and dams have proved more or less destructive to the fisheries. The shad make their appearance early in May, at the same time with the blossoms of the pyrus, one of the most conspicuous early flowers, which is for this reason called the shad-blossom. An insect called the shad-fly also appears at the same time, covering the houses and fences. We are told that "their greatest run is when the apple-trees are in full blossom. The old shad return in August; the young, three or four inches long, in September. These are very fond of flies." A rather picturesque and luxurious mode of fishing was formerly practiced on the Connecticut, at Bellows Falls, where a large rock divides the stream. "On the steep sides of the island rock," says Belknap, "hang several arm-chairs, fastened to ladders, and secured by a counterpoise, in which fishermen sit to catch salmon and shad with dipping nets." The remains of Indian weirs, made of large stones, are still to be seen in the Winnipiseogee, one of the head-waters of this river.

It cannot but affect our philosophy favorably to be reminded of these shoals of migratory fishes, of salmon, shad, alewives, marsh-bankers, and others, which penetrate up the innumerable rivers of our coast in the spring, even to the interior lakes, their scales gleaming in the sun; and again, of the fry which in still greater numbers wend their way downward to the sea. "And is it not pretty sport," wrote Captain John Smith, who was

on this coast as early as 1614, "to pull up twopence, sixpence, and twelpence, as fast as you can haul and veer a line?" "And what sport doth yield a more pleasing content, and less hurt or charge, than angling with a hook, and crossing the sweet air from isle to isle, over the silent streams of a calm sea?"

On the sandy shore, opposite the Glass-house village in Chelmsford, at the Great Bend, where we landed to rest us and gather a few wild plums, we discovered the *Campanula rotundifolia*, a new flower to us, the harebell of the poets, which is common to both hemispheres, growing close to the water. Here, in the shady branches of an apple tree on the sand, we took our nooning, where there was not a zephyr to disturb the repose of this glorious Sabbath day, and we reflected serenely on the long past and successful labors of Latona.

"So silent is the cessile air,
That every cry and call,
The hills, and dales, and forest fair
Again repeats them all.

"The herds beneath some leafy trees,
Amidst the flowers they lie,
The stable ships upon the seas
Tend up their sails to dry."

As we thus rested in the shade, or rowed leisurely along, we had recourse, from time to time, to the Gazetteer, which was our Navigator, and from its bald natural facts extracted the pleasure of poetry. Beaver River comes in a little lower down, draining the meadows of Pelham, Windham, and Londonderry. The Scotch-

Irish settlers of the latter town, according to this authority, were the first to introduce the potato into New England, as well as the manufacture of linen cloth.

Everything that is printed and bound in a book contains some echo at least of the best that is in literature. Indeed, the best books have a use, like sticks and stones, which is above or beside their design, not anticipated in the preface, not concluded in the appendix. Even Virgil's poetry serves a very different use to me to-day from what it did to his contemporaries. It has often an acquired and accidental value merely, proving that man is still man in the world. It is pleasant to meet with such still lines as, —

“Jam laeto turgent in palmitum gemmae;”

Now the buds swell on the joyful stem.

“Strata jacent passim sua quaeque sub arbore poma;”

The apples lie scattered everywhere, each under its tree.

In an ancient and dead language, any recognition of living nature attracts us. These are such sentences as were written while grass grew and water ran. It is no small recommendation when a book will stand the test of mere unobstructed sunshine and daylight.

What would we not give for some great poem to read now, which would be in harmony with the scenery, — for if men read aright, methinks they would never read anything but poems. No history nor philosophy can supply their place.

The wisest definition of poetry the poet will instantly prove false by setting aside its requisitions. We can, therefore, publish only our advertisement of it.

There is no doubt that the loftiest written wisdom is

either rhymed or in some way musically measured, — is, in form as well as substance, poetry; and a volume which should contain the condensed wisdom of mankind need not have one rhythmless line.

Yet poetry, though the last and finest result, is a natural fruit. As naturally as the oak bears an acorn, and the vine a gourd, man bears a poem, either spoken or done. It is the chief and most memorable success, for history is but a prose narrative of poetic deeds. What else have the Hindoos, the Persians, the Babylonians, the Egyptians done, that can be told? It is the simplest relation of phenomena, and describes the commonest sensations with more truth than science does, and the latter at a distance slowly mimics its style and methods. The poet sings how the blood flows in his veins. He performs his functions, and is so well that he needs such stimulus to sing only as plants to put forth leaves and blossoms. He would strive in vain to modulate the remote and transient music which he sometimes hears, since his song is a vital function like breathing, and an integral result like weight. It is not the overflowing of life, but its subsidence rather, and is drawn from under the feet of the poet. It is enough if Homer but say the sun sets. He is as serene as nature, and we can hardly detect the enthusiasm of the bard. It is as if nature spoke. He presents to us the simplest pictures of human life, so the child itself can understand them, and the man must not think twice to appreciate his naturalness. Each reader discovers for himself that, with respect to the simpler features of nature, succeeding poets have done little else than copy his similes. His more memorable passages are

as naturally bright as gleams of sunshine in misty weather. Nature furnishes him not only with words, but with stereotyped lines and sentences from her mint.

“As from the clouds appears the full moon,
All shining, and then again it goes behind the shadowy clouds,
So Hector at one time appeared among the foremost,
And at another in the rear, commanding; and all with brass
He shone, like to the lightning of ægis-bearing Zeus.”

He conveys the least information, even the hour of the day, with such magnificence and vast expense of natural imagery, as if it were a message from the gods.

“While it was dawn, and sacred day was advancing,
For that space the weapons of both flew fast, and the people fell;
But when now the woodcutter was preparing his morning meal,
In the recesses of the mountain, and had wearied his hands
With cutting lofty trees, and satiety came to his mind,
And the desire of sweet food took possession of his thoughts;
Then the Danaans, by their valor, broke the phalanxes,
Shouting to their companions from rank to rank.”

When the army of the Trojans passed the night under arms, keeping watch lest the enemy should reëmbark under cover of the dark, —

“They, thinking great things, upon the neutral ground of war
Sat all the night; and many fires burned for them.
As when in the heavens the stars round the bright moon
Appear beautiful, and the air is without wind;
And all the heights, and the extreme summits,
And the wooded sides of the mountains appear; and from the heavens
an infinite ether is diffused,
And all the stars are seen; and the shepherd rejoices in his heart;
So between the ships and the streams of Xanthus
Appeared the fires of the Trojans before Ilium.
A thousand fires burned on the plain; and by each
Sat fifty, in the light of the blazing fire;

And horses eating white barley and corn,
Standing by the chariots, awaited fair-throned Aurora."

The "white-armed goddess Juno," sent by the Father
of gods and men for Iris and Apollo, —

"Went down the Idæan mountains to far Olympus,
As when the mind of a man, who has come over much earth,
Sallies forth, and he reflects with rapid thoughts,
There was I, and there, and remembers many things;
So swiftly the august Juno hastening flew through the air,
And came to high Olympus."

His scenery is always true, and not invented. He does
not leap in imagination from Asia to Greece, through
mid-air, —

*ἐπειὴ μάλα πολλὰ μεταξὺ
οὐρᾶ τε σκιδέντα, θάλασσά τε ἤχῃεσσα.*

For there are very many
Shady mountains and resounding seas between.

If his messengers repair but to the tent of Achilles, we
do not wonder how they got there, but accompany them
step by step along the shore of the resounding sea.
Nestor's account of the march of the Pylians against
the Epeians is extremely lifelike: —

"Then rose up at them sweet-worded Nestor, the shrill orator of the
Pylians,
And words sweeter than honey flowed from his tongue."

This time, however, he addresses Patroclus alone: "A
certain river, Minyas by name, leaps seaward near to
Arene, where we Pylians wait the dawn, both horse and
foot. Thence with all haste we sped us on the morrow
ere 't was noonday, accoutred for the fight, even to
Alpheus's sacred source," etc. We fancy that we hear

the subdued murmuring of the Minyas discharging its waters into the main the livelong night, and the hollow sound of the waves breaking on the shore, — until at length we are cheered at the close of a toilsome march by the gurgling fountains of Alpheus.

There are few books which are fit to be remembered in our wisest hours, but the *Iliad* is brightest in the serenest days, and embodies still all the sunlight that fell on Asia Minor. No modern joy or ecstasy of ours can lower its height or dim its lustre, but there it lies in the east of literature, as it were the earliest and latest production of the mind. The ruins of Egypt oppress and stifle us with their dust, foulness preserved in cassia and pitch, and swathed in linen; the death of that which never lived. But the rays of Greek poetry struggle down to us, and mingle with the sunbeams of the recent day. The statue of Memnon is cast down, but the shaft of the *Iliad* still meets the sun in his rising.

“Homer is gone ; and where is Jove ? and where
The rival cities seven ? His song outlives
Time, tower, and god, — all that then was, save Heaven.”

So, too, no doubt, Homer had his Homer, and Orpheus his Orpheus, in the dim antiquity which preceded them. The mythological system of the ancients, — and it is still the mythology of the moderns, the poem of mankind, — interwoven so wonderfully with their astronomy, and matching in grandeur and harmony the architecture of the heavens themselves, seems to point to a time when a mightier genius inhabited the earth. But, after all, man is the great poet, and not Homer nor Shakespeare; and our language itself, and the common

arts of life, are his work. Poetry is so universally true and independent of experience that it does not need any particular biography to illustrate it, but we refer it sooner or later to some Orpheus or Linus, and after ages to the genius of humanity and the gods themselves.

It would be worth the while to select our reading, for books are the society we keep; to read only the serenely true; never statistics, nor fiction, nor news, nor reports, nor periodicals, but only great poems, and when they failed, read them again, or perchance write more. Instead of other sacrifice, we might offer up our perfect (τέλεια) thoughts to the gods daily, in hymns or psalms. For we should be at the helm at least once a day. The whole of the day should not be daytime; there should be one hour, if no more, which the day did not bring forth. Scholars are wont to sell their birthright for a mess of learning. But is it necessary to know what the speculator prints, or the thoughtless study, or the idle read, the literature of the Russians and the Chinese, or even French philosophy and much of German criticism? Read the best books first, or you may not have a chance to read them at all. "There are the worshipers with offerings, and the worshipers with mortifications; and again the worshipers with enthusiastic devotion; so there are those the wisdom of whose reading is their worship, men of subdued passions and severe manners. — This world is not for him who doth not worship; and where, O Arjoon, is there another?" Certainly, we do not need to be soothed and entertained always like children. He who resorts to the easy novel, because he is

languid, does no better than if he took a nap. The front aspect of great thoughts can only be enjoyed by those who stand on the side whence they arrive. Books, not which afford us a cowering enjoyment, but in which each thought is of unusual daring; such as an idle man cannot read, and a timid one would not be entertained by, which even make us dangerous to existing institutions, — such call I good books.

All that are printed and bound are not books; they do not necessarily belong to letters, but are oftener to be ranked with the other luxuries and appendages of civilized life. Base wares are palmed off under a thousand disguises. "The way to trade," as a peddler once told me, "is to *put it right through*," no matter what it is, anything that is agreed on.

"You grov'ling worldlings, you whose wisdom trades
Where light ne'er shot his golden ray."

By dint of able writing and pen-craft, books are cunningly compiled, and have their run and success even among the learned, as if they were the result of a new man's thinking, and their birth were attended with some natural throes. But in a little while their covers fall off, for no binding will avail, and it appears that they are not Books or Bibles at all. There are new and patented inventions in this shape, purporting to be for the elevation of the race, which many a pure scholar and genius who has learned to read is for a moment deceived by, and finds himself reading a horse-rake, or spinning-jenny, or wooden nutmeg, or oak-leaf cigar, or steam-power press, or kitchen range, perchance, when he was seeking serene and biblical truths.

“Merchants, arise,
And mingle conscience with your merchandise.”

Paper is cheap, and authors need not now erase one book before they write another. Instead of cultivating the earth for wheat and potatoes, they cultivate literature, and fill a place in the Republic of Letters. Or they would fain write for fame merely, as others actually raise crops of grain to be distilled into brandy. Books are for the most part willfully and hastily written, as parts of a system to supply a want real or imagined. Books of natural history aim commonly to be hasty schedules, or inventories of God's property, by some clerk. They do not in the least teach the divine view of nature, but the popular view, or rather the popular method of studying nature, and make haste to conduct the persevering pupil only into that dilemma where the professors always dwell.

“To Athens gowned he goes, and from that school
Returns unsped, a more instructed fool.”

They teach the elements really of ignorance, not of knowledge; for, to speak deliberately and in view of the highest truths, it is not easy to distinguish elementary knowledge. There is a chasm between knowledge and ignorance which the arches of science can never span. A book should contain pure discoveries, glimpses of *terra firma*, though by shipwrecked mariners, and not the art of navigation by those who have never been out of sight of land. *They* must not yield wheat and potatoes, but must themselves be the unconstrained and natural harvest of their author's lives.

"What I have learned is mine; I've had my thought,
And me the Muses noble truths have taught."

We do not learn much from learned books, but from true, sincere, human books, from frank and honest biographies. The life of a good man will hardly improve us more than the life of a freebooter, for the inevitable laws appear as plainly in the infringement as in the observance, and our lives are sustained by a nearly equal expense of virtue of some kind. The decaying tree, while yet it lives, demands sun, wind, and rain no less than the green one. It secretes sap and performs the functions of health. If we choose, we may study the alburnum only. The gnarled stump has as tender a bud as the sapling.

At least let us have healthy books, a stout horse-rake, or a kitchen range which is not cracked. Let not the poet shed tears only for the public weal. He should be as vigorous as a sugar maple, with sap enough to maintain his own verdure, beside what runs into the troughs, and not like a vine, which being cut in the spring bears no fruit, but bleeds to death in the endeavor to heal its wounds. The poet is he that hath fat enough, like bears and marmots, to suck his claws all winter. He hibernates in this world, and feeds on his own marrow. We love to think in winter, as we walk over the snowy pastures, of those happy dreamers that lie under the sod, of dormice and all that race of dormant creatures, which have such a superfluity of life enveloped in thick folds of fur, impervious to cold. Alas, the poet too is in one sense a sort of dormouse gone into winter quarters of deep and serene thoughts, insensible to surrounding circumstances; his words are the relation of his oldest and finest memory,

a wisdom drawn from the remotest experience. Other men lead a starved existence, meanwhile, like hawks, that would fain keep on the wing, and trust to pick up a sparrow now and then.

There are already essays and poems, the growth of this land, which are not in vain, all which, however, we could conveniently have stowed in the till of our chest. If the gods permitted their own inspiration to be breathed in vain, these might be overlooked in the crowd, but the accents of truth are as sure to be heard at last on earth as in heaven. They already seem ancient, and in some measure have lost the traces of their modern birth. Here are they who

“ask for that which is our whole life’s light,
For the perpetual, true, and clear insight.”

I remember a few sentences which spring like the sward in its native pasture, where its roots were never disturbed, and not as if spread over a sandy embankment; answering to the poet’s prayer, —

“Let us set so just
A rate on knowledge, that the world may trust
The poet’s sentence, and not still aver
Each art is to itself a flatterer.”

But, above all, in our native port, did we not frequent the peaceful games of the Lyceum, from which a new era will be dated to New England, as from the games of Greece. For if Herodotus carried his history to Olympia to read, after the cestus and the race, have we not heard such histories recited there, which since our countrymen have read, as made Greece sometimes to be forgotten?

Philosophy, too, has there her grove and portico, not wholly unfrequented in these days.

Lately the victor, whom all Pindars praised, has won another palm, contending with

“Olympian bards who sung
Divine ideas below,
Which always find us young,
And always keep us so.”

What earth or sea, mountain or stream, or Muses' spring or grove, is safe from his all-searching, ardent eye, who drives off Phœbus' beaten track, visits unwonted zones, makes the gelid Hyperboreans glow, and the old polar serpent writhe, and many a Nile flow back and hide his head!

That Phaeton of our day,
Who'd make another milky way,
And burn the world up with his ray,

By us an undisputed seer, —
Who'd drive his flaming car so near
Unto our shuddering mortal sphere,

Disgracing all our slender worth,
And scorching up the living earth,
To prove his heavenly birth.

The silver spokes, the golden tire,
Are glowing with unwonted fire,
And ever nigher roll and nigher;

The pins and axle melted are,
The silver radii fly afar,
Ah, he will spoil his Father's car!

Who let him have the steeds he cannot steer?
Henceforth the sun will not shine for a year;
And we shall Ethiops all appear.

From *his*

“lips of cunning fell
The thrilling Delphic oracle.”

And yet, sometimes, —

We should not mind if on our ear there fell
Some less of cunning, more of oracle.

It is Apollo shining in your face. O rare Contemporary, let us have far-off heats. Give us the subtler, the heavenlier, though fleeting beauty, which passes through and through, and dwells not in the verse; even pure water, which but reflects those tints which wine wears in its grain. Let epic trade-winds blow, and cease this waltz of inspirations. Let us oftener feel even the gentle southwest wind upon our cheeks blowing from the Indian's heaven. What though we lose a thousand meteors from the sky, if skyey depths, if star-dust and undissolvable nebulæ remain? What though we lose a thousand wise responses of the oracle, if we may have instead some natural acres of Ionian earth?

Though we know well, —

“That 't is not in the power of kings [or presidents] to raise
A spirit for verse that is not born thereto,
Nor are they born in every prince's days;”

yet spite of all they sang in praise of their “Eliza's reign,” we have evidence that poets may be born and sing in *our* day, in the presidency of James K. Polk, —

“And that the utmost powers of English rhyme,”
Were not “within *her* peaceful reign confined.”

The prophecy of the poet Daniel is already how much more than fulfilled!

"And who, in time, knows whither we may vent
The treasure of our tongue, to what strange shores
This gain of our best glory shall be sent,
T' enrich unknowing nations with our stores?
What worlds in th' yet unformed Occident,
May come refin'd with th' accents that are ours."

Enough has been said in these days of the charm of fluent writing. We hear it complained of some works of genius that they have fine thoughts, but are irregular and have no flow. But even the mountain peaks in the horizon are, to the eye of science, parts of one range. We should consider that the flow of thought is more like a tidal wave than a prone river, and is the result of a celestial influence, not of any declivity in its channel. The river flows because it runs down hill, and flows the faster, the faster it descends. The reader who expects to float down-stream for the whole voyage may well complain of nauseating swells and choppings of the sea when his frail shore craft gets amidst the billows of the ocean stream, which flows as much to sun and moon as lesser streams to it. But if we would appreciate the flow that is in these books, we must expect to feel it rise from the page like an exhalation, and wash away our critical brains like burr millstones, flowing to higher levels above and behind ourselves. There is many a book which ripples on like a freshet, and flows as glibly as a mill-stream sucking under a causeway; and when their authors are in the full tide of their discourse, Pythagoras and Plato and Jamblichus halt beside them. Their long, stringy, slimy sentences are of that consistency that they naturally flow and run together. They read as if written for military

men, for men of business, there is such a dispatch in them. Compared with these, the grave thinkers and philosophers seem not to have got their swaddling-clothes off; they are slower than a Roman army in its march, the rear camping to-night where the van camped last night. The wise Jamblichus eddies and gleams like a watery slough.

“How many thousands never heard the name
Of Sidney, or of Spenser, or their books!
And yet brave fellows, and presume of fame,
And seem to bear down all the world with looks!”

The ready writer seizes the pen and shouts, “Forward! Alamo and Fanning!” and after rolls the tide of war. The very walls and fences seem to travel. But the most rapid trot is no flow after all; and thither, reader, you and I, at least, will not follow.

A perfectly healthy sentence, it is true, is extremely rare. For the most part we miss the hue and fragrance of the thought; as if we could be satisfied with the dews of the morning or evening without their colors, or the heavens without their azure. The most attractive sentences are, perhaps, not the wisest, but the surest and roundest. They are spoken firmly and conclusively, as if the speaker had a right to know what he says, and if not wise, they have at least been well learned. Sir Walter Raleigh might well be studied, if only for the excellence of his style, for he is remarkable in the midst of so many masters. There is a natural emphasis in his style, like a man’s tread, and a breathing space between the sentences, which the best of modern writing does not furnish. His chapters are like English parks, or say rather

like a Western forest, where the larger growth keeps down the underwood, and one may ride on horseback through the openings. All the distinguished writers of that period possess a greater vigor and naturalness than the more modern, — for it is allowed to slander our own time, — and when we read a quotation from one of them in the midst of a modern author, we seem to have come suddenly upon a greener ground, a greater depth and strength of soil. It is as if a green bough were laid across the page, and we are refreshed as by the sight of fresh grass in midwinter or early spring. You have constantly the warrant of life and experience in what you read. The little that is said is eked out by implication of the much that was done. The sentences are verdurous and blooming as evergreen and flowers, because they are rooted in fact and experience, but our false and florid sentences have only the tints of flowers without their sap or roots. All men are really most attracted by the beauty of plain speech, and they even write in a florid style in imitation of this. They prefer to be misunderstood rather than to come short of its exuberance. Hussein Effendi praised the epistolary style of Ibrahim Pasha to the French traveler Botta, because of “the difficulty of understanding it; there was,” he said, “but one person at Jidda who was capable of understanding and explaining the Pasha’s correspondence.” A man’s whole life is taxed for the least thing well done. It is its net result. Every sentence is the result of a long probation. Where shall we look for standard English but to the words of a standard man? The word which is best said came nearest to not being spoken at all, for it is cousin to a

deed which the speaker could have better done. Nay, almost it must have taken the place of a deed by some urgent necessity, even by some misfortune, so that the truest writer will be some captive knight, after all. And perhaps the fates had such a design, when, having stored Raleigh so richly with the substance of life and experience, they made him a fast prisoner, and compelled him to make his words his deeds, and transfer to his expression the emphasis and sincerity of his action.

Men have a respect for scholarship and learning greatly out of proportion to the use they commonly serve. We are amused to read how Ben Jonson engaged that the dull masks with which the royal family and nobility were to be entertained should be "grounded upon antiquity and solid learning." Can there be any greater reproach than an idle learning? Learn to split wood, at least. The necessity of labor and conversation with many men and things to the scholar is rarely well remembered; steady labor with the hands, which engrosses the attention also, is unquestionably the best method of removing palaver and sentimentality out of one's style, both of speaking and writing. If he has worked hard from morning till night, though he may have grieved that he could not be watching the train of his thoughts during that time, yet the few hasty lines which at evening record his day's experience will be more musical and true than his freest but idle fancy could have furnished. Surely the writer is to address a world of laborers, and such therefore must be his own discipline. He will not idly dance at his work who has wood to cut and cord before nightfall in the short days of winter; but

every stroke will be husbanded, and ring soberly through the wood; and so will the strokes of that scholar's pen, which at evening record the story of the day, ring soberly, yet cheerily, on the ear of the reader, long after the echoes of his axe have died away. The scholar may be sure that he writes the tougher truth for the calluses on his palms. They give firmness to the sentence. Indeed, the mind never makes a great and successful effort, without a corresponding energy of the body. We are often struck by the force and precision of style to which hard-working men, unpracticed in writing, easily attain when required to make the effort. As if plainness and vigor and sincerity, the ornaments of style, were better learned on the farm and in the workshop than in the schools. The sentences written by such rude hands are nervous and tough, like hardened thongs, the sinews of the deer, or the roots of the pine. As for the graces of expression, a great thought is never found in a mean dress; but though it proceed from the lips of the Wolofs, the nine Muses and the three Graces will have conspired to clothe it in fit phrase. Its education has always been liberal, and its implied wit can endow a college. The world, which the Greeks called Beauty, has been made such by being gradually divested of every ornament which was not fitted to endure. The Sibyl, "speaking with inspired mouth, smileless, inornate, and unperfumed, pierces through centuries by the power of the god." The scholar might frequently emulate the propriety and emphasis of the farmer's call to his team, and confess that if that were written it would surpass his labored sentences. Whose are the truly *labored* sentences?

From the weak and flimsy periods of the politician and literary man, we are glad to turn even to the description of work, the simple record of the month's labor in the farmer's almanac, to restore our tone and spirits. A sentence should read as if its author, had he held a plow instead of a pen, could have drawn a furrow deep and straight to the end. The scholar requires hard and serious labor to give an impetus to his thought. He will learn to grasp the pen firmly so, and wield it gracefully and effectively, as an axe or a sword. When we consider the weak and nerveless periods of some literary men, who perchance in feet and inches come up to the standard of their race, and are not deficient in girth also, we are amazed at the immense sacrifice of thews and sinews. What! these proportions, these bones, — and this their work! Hands which could have felled an ox have hewed this fragile matter which would not have tasked a lady's fingers! Can this be a stalwart man's work, who has a marrow in his back and a tendon Achilles in his heel? They who set up the blocks of Stonehenge did somewhat, if they only laid out their strength for once, and stretched themselves.

Yet, after all, the truly efficient laborer will not crowd his day with work, but will saunter to his task, surrounded by a wide halo of ease and leisure, and then do but what he loves best. He is anxious only about the fruitful kernels of time. Though the hen should sit all day, she could lay only one egg, and, besides, would not have picked up materials for another. Let a man take time enough for the most trivial deed, though it be but the paring of his nails. The buds swell imperceptibly,

without hurry or confusion, as if the short spring days were an eternity.

Then spend an age in whetting thy desire,
Thou need'st not *hasten* if thou dost *stand fast*.

Some hours seem not to be occasion for any deed, but for resolves to draw breath in. We do not directly go about the execution of the purpose that thrills us, but shut our doors behind us and ramble with prepared mind, as if the half were already done. Our resolution is taking root or hold on the earth then, as seeds first send a shoot downward which is fed by their own albumen, ere they send one upward to the light.

There is a sort of homely truth and naturalness in some books which is very rare to find, and yet looks cheap enough. There may be nothing lofty in the sentiment, or fine in the expression, but it is careless country talk. Homeliness is almost as great a merit in a book as in a house, if the reader would abide there. It is next to beauty, and a very high art. Some have this merit only. The scholar is not apt to make his most familiar experience come gracefully to the aid of his expression. Very few men can speak of Nature, for instance, with any truth. They overstep her modesty, somehow or other, and confer no favor. They do not speak a good word for her. Most cry better than they speak, and you can get more nature out of them by pinching than by addressing them. The surliness with which the woodchopper speaks of his woods, handling them as indifferently as his axe, is better than the mealy-mouthed enthusiasm of the lover of nature. Better that the primrose by the river's

brim be a yellow primrose, and nothing more, than that it be something less. Aubrey relates of Thomas Fuller that his was "a very working head, insomuch that, walking and meditating before dinner, he would eat up a penny loaf, not knowing that he did it. His natural memory was very great, to which he added the art of memory. He would repeat to you forwards and backwards all the signs from Ludgate to Charing Cross." He says of Mr. John Hales, that "he loved Canarie," and was buried "under an altar monument of black marble . . . with a too long epitaph;" of Edmund Halley, that he "at sixteen could make a dial, and then, he said, he thought himself a brave fellow;" of William Holder, who wrote a book upon his curing one Popham who was deaf and dumb, "he was beholding to no author; did only consult with nature." For the most part, an author consults only with all who have written before him upon a subject, and his book is but the advice of so many. But a good book will never have been forestalled, but the topic itself will in one sense be new, and its author, by consulting with nature, will consult not only with those who have gone before, but with those who may come after. There is always room and occasion enough for a true book on any subject; as there is room for more light the brightest day, and more rays will not interfere with the first.

We thus worked our way up this river, gradually adjusting our thoughts to novelties, beholding from its placid bosom a new nature and new works of men, and, as it were with increasing confidence, finding nature

still habitable, genial, and propitious to us; not following any beaten path, but the windings of the river, as ever the nearest way for us. Fortunately we had no business in this country. The Concord had rarely been a river, or *rivus*, but barely *fluvius*, or between *fluvius* and *lacus*. This Merrimack was neither *rivus* nor *fluvius* nor *lacus*, but rather *amnis* here, a gently swelling and stately rolling flood approaching the sea. We could even sympathize with its buoyant tide, going to seek its fortune in the ocean, and, anticipating the time when "being received within the plain of its freer water," it should "beat the shores for banks," —

"campoque recepta

Liberioris aquae, pro ripis litora pulsant."

At length we doubled a low shrubby islet, called Rabbit Island, subjected alternately to the sun and to the waves, as desolate as if it lay some leagues within the icy sea, and found ourselves in a narrower part of the river, near the sheds and yards for picking the stone known as the Chelmsford granite, which is quarried in Westford and the neighboring towns. We passed Wicasuck Island, which contains seventy acres or more, on our right, between Chelmsford and Tyngsborough. This was a favorite residence of the Indians. According to the History of Dunstable, "About 1663, the eldest son of Passaconaway [Chief of the Penacooks] was thrown into jail for a debt of £45, due to John Tinker, by one of his tribe, and which he had promised verbally should be paid. To relieve him from his imprisonment, his brother Wannalancet and others, who owned Wicasuck Island, sold it and paid the debt." It was, however,

restored to the Indians by the General Court in 1665. After the departure of the Indians in 1683, it was granted to Jonathan Tyng in payment for his services to the colony, in maintaining a garrison at his house. Tyng's house stood not far from Wicasuck Falls. Gookin, who, in his Epistle Dedicatory to Robert Boyle, apologizes for presenting his "matter clothed in a wilderness dress," says that, on the breaking out of Philip's war in 1675, there were taken up by the Christian Indians and the English in Marlborough, and sent to Cambridge, seven "Indians belonging to Narragansett, Long Island, and Pequod, who had all been at work about seven weeks with one Mr. Jonathan Tyng, of Dunstable, upon Merrimack River: and, hearing of the war, they reckoned with their master, and getting their wages, conveyed themselves away without his privity, and, being afraid, marched secretly through the woods, designing to go to their own country." However, they were released soon after. Such were the hired men in those days. Tyng was the first permanent settler of Dunstable, which then embraced what is now Tyngsborough and many other towns. In the winter of 1675, in Philip's war, every other settler left the town, but "he," says the historian of Dunstable, "fortified his house; and, although 'obliged to send to Boston for his food,' sat himself down in the midst of his savage enemies, alone, in the wilderness, to defend his home. Deeming his position an important one for the defense of the frontiers, in February, 1676, he petitioned the Colony for aid," humbly showing, as his petition runs, that, as he lived "in the uppermost house on Merrimac river, lying open to y^e enemy, yet

being so seated that it is, as it were, a watch-house to the neighboring towns," he could render important service to his country if only he had some assistance, "there being," he said, "never an inhabitant left in the town but myself." Wherefore he requests that their "Honors would be pleased to order him *three or four men* to help garrison his said house," which they did. But methinks that such a garrison would be weakened by the addition of a man.

"Make bandog thy scout watch to bark at a thief,
Make courage for life, to be captain chief;
Make trap-door thy bulwark, make bell to begin,
Make gunstone and arrow show who is within."

Thus he earned the title of first permanent settler. In 1694 a law was passed "that every settler who deserted a town for fear of the Indians should forfeit all his rights therein." But now, at any rate, as I have frequently observed, a man may desert the fertile frontier territories of truth and justice, which are the State's best lands, for fear of far more insignificant foes, without forfeiting any of his civil rights therein. Nay, townships are granted to deserters, and the General Court, as I am sometimes inclined to regard it, is but a deserters' camp itself.

As we rowed along near the shore of Wicasuck Island, which was then covered with wood, in order to avoid the current, two men, who looked as if they had just run out of Lowell, where they had been waylaid by the Sabbath, meaning to go to Nashua, and who now found themselves in the strange, natural, uncultivated, and unsettled part of the globe which intervenes, full of walls and barriers,

a rough and uncivil place to them, seeing our boat moving so smoothly up the stream, called out from the high bank above our heads to know if we would take them as passengers, as if this were the street they had missed; that they might sit and chat and drive away the time, and so at last find themselves in Nashua. This smooth way they much preferred. But our boat was crowded with necessary furniture, and sunk low in the water, and moreover required to be worked, for even *it* did not progress against the stream without effort; so we were obliged to deny them passage. As we glided away with even sweeps, while the fates scattered oil in our course, the sun now sinking behind the alders on the distant shore, we could still see them far off over the water, running along the shore and climbing over the rocks and fallen trees like insects, — for they did not know any better than we that they were on an island, — the unsympathizing river ever flowing in an opposite direction; until, having reached the entrance of the island brook, which they had probably crossed upon the locks below, they found a more effectual barrier to their progress. They seemed to be learning much in a little time. They ran about like ants on a burning brand, and once more they tried the river here, and once more there, to see if water still indeed was not to be walked on, as if a new thought inspired them, and by some peculiar disposition of the limbs they could accomplish it. At length sober common sense seemed to have resumed its sway, and they concluded that what they had so long heard must be true, and resolved to ford the shallower stream. When nearly a mile distant we could see them stripping

off their clothes and preparing for this experiment; yet it seemed likely that a new dilemma would arise, they were so thoughtlessly throwing away their clothes on the wrong side of the stream, as in the case of the countryman with his corn, his fox, and his goose, which had to be transported one at a time. Whether they got safely through, or went round by the locks, we never learned. We could not help being struck by the seeming, though innocent, indifference of Nature to these men's necessities, while elsewhere she was equally serving others. Like a true benefactress, the secret of her service is unchangeableness. Thus is the busiest merchant, though within sight of his Lowell, put to pilgrim's shifts, and soon comes to staff and scrip and scallop-shell.

We, too, who held the middle of the stream, came near experiencing a pilgrim's fate, being tempted to pursue what seemed a sturgeon or larger fish, for we remembered that this was the Sturgeon River, its dark and monstrous back alternately rising and sinking in midstream. We kept falling behind, but the fish kept his back well out, and did not dive, and seemed to prefer to swim against the stream, so, at any rate, he would not escape us by going out to sea. At length, having got as near as was convenient, and looking out not to get a blow from his tail, now the bow-gunner delivered his charge, while the stern-man held his ground. But the halibut-skinned monster, in one of these swift-gliding pregnant moments, without ever ceasing his bobbing, up and down, saw fit, without a chuckle or other prelude, to proclaim himself a huge imprisoned spar, placed there as a buoy, to warn sailors of sunken rocks. So, each

casting some blame upon the other, we withdrew quickly to safer waters.

The Scene-shifter saw fit here to close the drama of this day without regard to any unities which we mortals prize. Whether it might have proved tragedy, or comedy, or tragi-comedy, or pastoral, we cannot tell. This Sunday ended by the going down of the sun, leaving us still on the waves. But they who are on the water enjoy a longer and brighter twilight than they who are on the land, for here the water, as well as the atmosphere, absorbs and reflects the light, and some of the day seems to have sunk down into the waves. The light gradually forsook the deep water, as well as the deeper air, and the gloaming came to the fishes as well as to us, and more dim and gloomy to them, whose day is a perpetual twilight, though sufficiently bright for their weak and watery eyes. Vespers had already rung in many a dim and watery chapel down below, where the shadows of the weeds were extended in length over the sandy floor. The vespertinal pout had already begun to flit on leathern fin, and the finny gossips withdrew from the fluvial street to creeks and coves, and other private haunts, excepting a few of stronger fin, which anchored in the stream, stemming the tide even in their dreams. Meanwhile, like a dark evening cloud, we were wafted over the cope of their sky, deepening the shadows on their deluged fields.

Having reached a retired part of the river where it spread out to sixty rods in width, we pitched our tent on the east side, in Tyngsborough, just above some patches of the beach plum, which was now nearly ripe, where the

sloping bank was a sufficient pillow, and with the bustle of sailors making the land, we transferred such stores as were required from boat to tent, and hung a lantern to the tent-pole, and so our house was ready. With a buffalo spread on the grass, and a blanket for our covering, our bed was soon made. A fire crackled merrily before the entrance, so near that we could tend it without stepping abroad, and when we had supped, we put out the blaze, and closed the door, and with the semblance of domestic comfort, sat up to read the *Gazetteer*, to learn our latitude and longitude, and write the journal of the voyage, or listened to the wind and the rippling of the river till sleep overtook us. There we lay under an oak on the bank of the stream, near to some farmer's cornfield, getting sleep, and forgetting where we were; a great blessing, that we are obliged to forget our enterprises every twelve hours. Minks, muskrats, meadow mice, woodchucks, squirrels, skunks, rabbits, foxes, and weasels, all inhabit near, but keep very close while you are there. The river sucking and eddying away all night down toward the marts and the seaboard, a great wash and freshet, and no small enterprise to reflect on. Instead of the Scythian vastness of the *Billerica* night, and its wild musical sounds, we were kept awake by the boisterous sport of some Irish laborers on the railroad, wafted to us over the water, still unwearied and unresting on this seventh day, who would not have done with whirling up and down the track with ever-increasing velocity and still reviving shouts, till late in the night.

One sailor was visited in his dreams this night by the *Evil Destinies*, and all those powers that are hostile

to human life, which constrain and oppress the minds of men, and make their path seem difficult and narrow, and beset with dangers, so that the most innocent and worthy enterprises appear insolent and a tempting of fate, and the gods go not with us. But the other happily passed a serene and even ambrosial or immortal night, and his sleep was dreamless, or only the atmosphere of pleasant dreams remained, a happy, natural sleep until the morning; and his cheerful spirit soothed and reassured his brother, for whenever they meet, the Good Genius is sure to prevail.

MONDAY

I thynke for to touche also
The worlde whiche neweth everie daie,
So as I can, so as I maie. — GOWER.

The hye sheryfe of Notynghame,
Hym holde in your mynde. — *Robin Hood Ballads.*

His shoote it was but loosely shott,
Yet flewe not the arrowe in vaine,
For it mett one of the sheriffe's men,
And William a Trent was slaine.
Robin Hood Ballads.

Gazed on the Heavens for what he missed on Earth.
Britannia's Pastorals.

WHEN the first light dawned on the earth, and the birds awoke, and the brave river was heard rippling confidently seaward, and the nimble early rising wind rustled the oak leaves about our tent, all men, having reinforced their bodies and their souls with sleep, and cast aside doubt and fear, were invited to unattempted adventures.

“All courageous knichtis
Agains the day dichtis
The breest-plate that bricht is,
To feght with their foue.

The stoned steed stampis
Throw curage and crampis,
Syne on the land lampis;
The night is neir gone.”

One of us took the boat over to the opposite shore, which was flat and accessible, a quarter of a mile distant, to empty it of water and wash out the clay, while the other kindled a fire and got breakfast ready. At an early hour we were again on our way, rowing through the fog as before, the river already awake, and a million crisped waves come forth to meet the sun when he should show himself. The countrymen, recruited by their day of rest, were already stirring, and had begun to cross the ferry on the business of the week. This ferry was as busy as a beaver dam, and all the world seemed anxious to get across the Merrimack River at this particular point, waiting to get set over, — children with their two cents done up in paper, jail-birds broke loose and constable with warrant, travelers from distant lands to distant lands, men and women to whom the Merrimack River was a bar. There stands a gig in the gray morning, in the mist, the impatient traveler pacing the wet shore with whip in hand, and shouting through the fog after the regardless Charon and his retreating ark, as if he might throw that passenger overboard and return forthwith for himself; he will compensate him. He is to break his fast at some unseen place on the opposite side. It may be Ledyard or the Wandering Jew. Whence, pray, did he come out of the foggy night? and whither through the sunny day will he go? We observe only his transit; important to us, forgotten by him, transiting all day. There are two of them. Maybe they are Virgil and Dante. But when they crossed the Styx, none were seen bound up or down the stream, that I remember. It is only a *transjunctus*, a transitory voyage,

like life itself, none but the long-lived gods bound up or down the stream. Many of these Monday men are ministers, no doubt, reseaking their parishes with hired horses, with sermons in their valises all read and gutted, the day after never with them. They cross each other's routes all the country over like woof and warp, making a garment of loose texture; vacation now for six days. They stop to pick nuts and berries, and gather apples, by the wayside at their leisure. Good religious men, with the love of men in their hearts, and the means to pay their toll in their pockets. We got over this ferry chain without scraping, rowing athwart the tide of travel, — no toll for us that day.

The fog dispersed, and we rowed leisurely along through Tyngsborough, with a clear sky and a mild atmosphere, leaving the habitations of men behind, and penetrating yet farther into the territory of ancient Dunstable. It was from Dunstable, then a frontier town, that the famous Captain Lovewell, with his company, marched in quest of the Indians on the 18th of April, 1725. He was the son of "an ensign in the army of Oliver Cromwell, who came to this country, and settled at Dunstable, where he died at the great age of one hundred and twenty years." In the words of the old nursery tale, sung about a hundred years ago, —

"He and his valiant soldiers did range the woods full wide,
And hardships they endured to quell the Indian's pride."

In the shaggy pine forest of Pequawket they met the "rebel Indians," and prevailed, after a bloody fight, and a remnant returned home to enjoy the fame of their victory. A township called Lovewell's Town, but now,

for some reason, or perhaps without reason, Pembroke, was granted them by the State.

“Of all our valiant English, there were but thirty-four,
And of the rebel Indians, there were about four-score;
And sixteen of our English did safely home return,
The rest were killed and wounded, for which we all must mourn.

Our worthy Capt. Lovewell among them there did die,
They killed Lieut. Robbins, and wounded good young Frye,
Who was our English Chaplin; he many Indians slew,
And some of them he scalped while bullets round him flew.”

Our brave forefathers have exterminated all the Indians, and their degenerate children no longer dwell in garrisoned houses nor hear any war-whoop in their path. It would be well, perchance, if many an “English Chaplin” in these days could exhibit as unquestionable trophies of his valor as did “good young Frye.” We have need to be as sturdy pioneers still as Miles Standish, or Church, or Lovewell. We are to follow on another trail, it is true, but one as convenient for ambushes. What if the Indians are exterminated, are not savages as grim prowling about the clearings to-day?

“And braving many dangers and hardships in the way,
They safe arrived at Dunstable the thirteenth (?) day of May.”

But they did not all “safe arrive in Dunstable the thirteenth,” or the fifteenth, or the thirtieth “day of May.” Eleazer Davis and Josiah Jones, both of Concord,—for our native town had seven men in this fight,—Lieutenant Farwell, of Dunstable, and Jonathan Frye, of Andover, who were all wounded, were left behind, creeping toward the settlements. “After traveling sev-

eral miles, Frye was left and lost," though a more recent poet has assigned him company in his last hours.

"A man he was of comely form,
Polished and brave, well learned and kind;
Old Harvard's learned halls he left
Far in the wilds a grave to find.

"Ah! now his blood-red arm he lifts;
His closing lids he tries to raise;
And speak once more before he dies,
In supplication and in praise.

"He prays kind Heaven to grant success,
Brave Lovewell's men to guide and bless,
And when they 've shed their heart-blood true,
To raise them all to happiness.

.
"Lieutenant Farwell took his hand,
His arm around his neck he threw,
And said, 'Brave Chaplain, I could wish
That Heaven had made me die for you."

Farwell held out eleven days. "A tradition says," as we learn from the History of Concord, "that arriving at a pond with Lieut. Farwell, Davis pulled off one of his moccasins, cut it in strings, on which he fastened a hook, caught some fish, fried and ate them. They refreshed him, but were injurious to Farwell, who died soon after." Davis had a ball lodged in his body, and his right hand shot off; but on the whole, he seems to have been less damaged than his companions. He came into Berwick after being out fourteen days. Jones also had a ball lodged in his body, but he likewise got into Saco after fourteen days, though not in the best condi-

tion imaginable. "He had subsisted," says an old journal, "on the spontaneous vegetables of the forest; and cranberries which he had eaten came out of wounds he had received in his body." This was also the case with Davis. The last two reached home at length, safe if not sound, and lived many years in a crippled state to enjoy their pension.

But alas! of the crippled Indians, and their adventures in the woods, —

"For as we are informed, so thick and fast they fell,

Scarce twenty of their number at night did get home well," —

how many balls lodged with them, how fared their cranberries, what Berwick or Saco they got into, and finally what pension or township was granted them, there is no journal to tell.

It is stated in the History of Dunstable that just before his last march, Lovewell was warned to beware of the ambuscades of the enemy, but "he replied, 'that he did not care for them,' and bending down a small elm beside which he was standing into a bow, declared 'that he would treat the Indians in the same way.' This elm is still standing [in Nashua], a venerable and magnificent tree."

Meanwhile, having passed the Horseshoe Interval in Tyngsborough, where the river makes a sudden bend to the northwest, — for our reflections have anticipated our progress somewhat, — we were advancing farther into the country and into the day, which last proved almost as golden as the preceding, though the slight bustle and activity of the Monday seemed to penetrate even

to this scenery. Now and then we had to muster all our energy to get round a point, where the river broke rippling over rocks, and the maples trailed their branches in the stream, but there was generally a backwater or eddy on the side, of which we took advantage. The river was here about forty rods wide and fifteen feet deep. Occasionally one ran along the shore, examining the country, and visiting the nearest farmhouses, while the other followed the windings of the stream alone, to meet his companion at some distant point, and hear the report of his adventures; how the farmer praised the coolness of his well, and his wife offered the stranger a draught of milk, or the children quarreled for the only transparency in the window that they might get sight of the man at the well. For though the country seemed so new, and no house was observed by us, shut in between the banks that sunny day, we did not have to travel far to find where men inhabited, like wild bees, and had sunk wells in the loose sand and loam of the Merrimack. There dwelt the subject of the Hebrew scriptures, and the *Esprit des Lois*, where a thin, vaporous smoke curled up through the noon. All that is told of mankind, of the inhabitants of the Upper Nile, and the Sunderbunds, and Timbuctoo, and the Orinoko, was experience here. Every race and class of men was represented. According to Belknap, the historian of New Hampshire, who wrote sixty years ago, here too, perchance, dwelt "new lights" and free-thinking men even then. "The people in general throughout the State," it is written, "are professors of the Christian religion in some form or other. There is, however, a sort

of *wise men* who pretend to reject it; but they have not yet been able to substitute a better in its place."

The other voyageur, perhaps, would in the mean while have seen a brown hawk, or a woodchuck, or a musquash creeping under the alders.

We occasionally rested in the shade of a maple or a willow, and drew forth a melon for our refreshment, while we contemplated at our leisure the lapse of the river and of human life; and as that current, with its floating twigs and leaves, so did all things pass in review before us, while far away in cities and marts on this very stream, the old routine was proceeding still. There is, indeed, a tide in the affairs of men, as the poet says, and yet as things flow they circulate, and the ebb always balances the flow. All streams are but tributary to the ocean, which itself does not stream, and the shores are unchanged, but in longer periods than man can measure. Go where we will, we discover infinite change in particulars only, not in generals. When I go into a museum and see the mummies wrapped in their linen bandages, I see that the lives of men began to need reform as long ago as when they walked the earth. I come out into the streets, and meet men who declare that the time is near at hand for the redemption of the race. But as men lived in Thebes, so do they live in Dunstable to-day. "Time drinketh up the essence of every great and noble action which ought to be performed, and is delayed in the execution." So says Veeshnoo Sarma; and we perceive that the schemers return again and again to common sense and labor. Such is the evidence of history.

“Yet I doubt not through the ages one increasing purpose runs,
And the thoughts of men are widened with the process of the Suns.”

There are secret articles in our treaties with the gods, of more importance than all the rest, which the historian can never know.

There are many skillful apprentices, but few master workmen. On every hand we observe a truly wise practice, in education, in morals, and in the arts of life, the embodied wisdom of many an ancient philosopher. Who does not see that heresies have some time prevailed, that reforms have already taken place? All this worldly wisdom might be regarded as the once unamiable heresy of some wise man. Some interests have got a footing on the earth which we have not made sufficient allowance for. Even they who first built these barns and cleared the land thus, had some valor. The abrupt epochs and chasms are smoothed down in history as the inequalities of the plain are concealed by distance. But unless we do more than simply learn the trade of our time, we are but apprentices, and not yet masters of the art of life.

Now that we are casting away these melon seeds, how can we help feeling reproach? He who eats the fruit should at least plant the seed; ay, if possible, a better seed than that whose fruit he has enjoyed. Seeds, there are seeds enough which need only be stirred in with the soil where they lie, by an inspired voice or pen, to bear fruit of a divine flavor. O thou spendthrift! Defray thy debt to the world; eat not the seed of institutions, as the luxurious do, but plant it rather, while thou devourest the pulp and tuber for thy subsistence;

that so, perchance, one variety may at last be found worthy of preservation.

There are moments when all anxiety and stated toil are becalmed in the infinite leisure and repose of nature. All laborers must have their nooning, and at this season of the day, we are all, more or less, Asiatics, and give over all work and reform. While lying thus on our oars by the side of the stream, in the heat of the day, our boat held by an osier put through the staple in its prow, and slicing the melons, which are a fruit of the East, our thoughts reverted to Arabia, Persia, and Hindostan, the lands of contemplation and dwelling-places of the ruminant nations. In the experience of this noontide we could find some apology even for the instinct of the opium, betel, and tobacco chewers. Mount Sabér, according to the French traveler and naturalist Botta, is celebrated for producing the Kát-tree, of which "the soft tops of the twigs and tender leaves are eaten," says his reviewer, "and produce an agreeable soothing excitement, restoring from fatigue, banishing sleep, and disposing to the enjoyment of conversation." We thought that we might lead a dignified Oriental life along this stream as well, and the maple and alders would be our Kát-trees.

It is a great pleasure to escape sometimes from the restless class of Reformers. What if these grievances exist? So do you and I. Think you that sitting hens are troubled with ennui these long summer days, sitting on and on in the crevice of a hay-loft, without active employment? By the faint cackling in distant barns, I judge that Dame Nature is interested still to know how many

eggs her hens lay. The Universal Soul, as it is called, has an interest in the stacking of hay, the foddering of cattle, and the draining of peat-meadows. Away in Scythia, away in India, it makes butter and cheese. Suppose that all farms *are* run out, and we youths must buy old land and bring it to, still everywhere the relentless opponents of reform bear a strange resemblance to ourselves; or, perchance, they are a few old maids and bachelors, who sit round the kitchen hearth and listen to the singing of the kettle. "The oracles often give victory to our choice, and not to the order alone of the mundane periods. As, for instance, when they say that our voluntary sorrows germinate in us as the growth of the particular life we lead." The reform which you talk about can be undertaken any morning before unbarring our doors. We need not call any convention. When two neighbors begin to eat corn bread, who before ate wheat, then the gods smile from ear to ear, for it is very pleasant to them. Why do you not try it? Don't let me hinder you.

There are theoretical reformers at all times, and all the world over, living on anticipation. Wolff, traveling in the deserts of Bokhara, says, "Another party of derveeshes came to me and observed, 'The time will come when there shall be no difference between rich and poor, between high and low, when property will be in common, even wives and children.'" But forever I ask of such, What then? The derveeshes in the deserts of Bokhara and the reformers in Marlboro' Chapel sing the same song. "There's a good time coming, boys," but, asked one of the audience, in good faith,

"Can you fix the date?" Said I, "Will you help it along?"

The nonchalance and *dolce-far-niente* air of nature and society hint at infinite periods in the progress of mankind. The States have leisure to laugh from Maine to Texas at some newspaper joke, and New England shakes at the double-entendres of Australian circles, while the poor reformer cannot get a hearing.

Men do not fail commonly for want of knowledge, but for want of prudence to give wisdom the preference. What we need to know in any case is very simple. It is but too easy to establish another durable and harmonious routine. Immediately all parts of nature consent to it. Only make something to take the place of something, and men will behave as if it was the very thing they wanted. They *must* behave, at any rate, and will work up any material. There is always a present and extant life, be it better or worse, which all combine to uphold. We should be slow to mend, my friends, as slow to require mending, "Not hurling, according to the oracle, a transcendent foot towards piety." The language of excitement is at best picturesque merely. You must be calm before you can utter oracles. What was the excitement of the Delphic priestess compared with the calm wisdom of Socrates, — or whoever it was that was wise? Enthusiasm is a supernatural serenity.

"Men find that action is another thing
Than what they in discoursing papers read;
The world's affairs require in managing
More arts than those wherein you clerks proceed."

As in geology, so in social institutions, we may discover

the causes of all past change in the present invariable order of society. The greatest appreciable physical revolutions are the work of the light-footed air, the stealthy-paced water, and the subterranean fire. Aristotle said, "As time never fails, and the universe is eternal, neither the Tanais nor the Nile can have flowed forever." We are independent of the change we detect. The longer the lever, the less perceptible its motion. It is the slowest pulsation which is the most vital. The hero then will know how to wait, as well as to make haste. All good abides with him who waiteth *wisely*; we shall sooner overtake the dawn by remaining here than by hurrying over the hills of the west. Be assured that every man's success is in proportion to his *average* ability. The meadow flowers spring and bloom where the waters annually deposit their slime, not where they reach in some freshet only. A man is not his hope, nor his despair, nor yet his past deed. We know not yet what we have done, still less what we are doing. Wait till evening, and other parts of our day's work will shine than we had thought at noon, and we shall discover the real purport of our toil. As when the farmer has reached the end of the furrow and looks back, he can tell best where the pressed earth shines most.

To one who habitually endeavors to contemplate the true state of things, the political state can hardly be said to have any existence whatever. It is unreal, incredible, and insignificant to him, and for him to endeavor to extract the truth from such lean material is like making sugar from linen rags, when sugar-cane

may be had. Generally speaking, the political news, whether domestic or foreign, might be written to-day for the next ten years with sufficient accuracy. Most revolutions in society have not power to interest, still less alarm us; but tell me that our rivers are drying up, or the genus pine dying out in the country, and I might attend. Most events recorded in history are more remarkable than important, like eclipses of the sun and moon, by which all are attracted, but whose effects no one takes the trouble to calculate.

But will the government never be so well administered, inquired one, that we private men shall hear nothing about it? "The king answered: At all events, I require a prudent and able man, who is capable of managing the state affairs of my kingdom. The ex-minister said: The criterion, O Sire! of a wise and competent man is, that he will not meddle with such like matters." Alas that the ex-minister should have been so nearly right!

In my short experience of human life, the *outward* obstacles, if there were any such, have not been living men, but the institutions of the dead. It is grateful to make one's way through this latest generation as through dewy grass. Men are as innocent as the morning to the unsuspecting.

"And round about good morrows fly,
As if day taught humanity."

Not being Reve of this Shire, —

"The early pilgrim blythe he hailed,
That o'er the hills did stray,
And many an early husbandman,
That he met on the way;" —

thieves and robbers all, nevertheless. I have not so surely foreseen that any Cossack or Chippeway would come to disturb the honest and simple commonwealth, as that some monster institution would at length embrace and crush its free members in its scaly folds; for it is not to be forgotten, that while the law holds fast the thief and murderer, it lets itself go loose. When I have not paid the tax which the State demanded for that protection which I did not want, itself has robbed me; when I have asserted the liberty it presumed to declare, itself has imprisoned me. Poor creature! if it knows no better I will not blame it. If it cannot live but by these means, I can. I do not wish, it happens, to be associated with Massachusetts, either in holding slaves or in conquering Mexico. I am a little better than herself in these respects. As for Massachusetts, that huge she Briareus, Argus, and Colchian Dragon conjoined, set to watch the Heifer of the Constitution and the Golden Fleece, we would not warrant our respect for her, like some compositions, to preserve its qualities through all weathers. Thus it has happened, that not the Arch Fiend himself has been in my way, but these toils which tradition says were originally spun to obstruct him. They are cobwebs and trifling obstacles in an earnest man's path, it is true, and at length one even becomes attached to his unswept and undusted garret. I love man — kind, but I hate the institutions of the dead unkind. Men execute nothing so faithfully as the wills of the dead, to the last codicil and letter. *They* rule this world, and the living are but their executors. Such foundation too have our lectures and our sermons, commonly. They are all

Dudleian; and piety derives its origin still from that exploit of *pious Æneas*, who bore his father, Anchises, on his shoulders from the ruins of Troy. Or, rather, like some Indian tribes, we bear about with us the mouldering relics of our ancestors on our shoulders. If, for instance, a man asserts the value of individual liberty over the merely political commonweal, his neighbor still tolerates him, that is, he who is *living near* him, sometimes even sustains him, but never the State. Its officer, as a living man, may have human virtues and a thought in his brain, but as the tool of an institution, a jailer or constable it may be, he is not a whit superior to his prison key or his staff. Herein is the tragedy: that men doing outrage to their proper natures, even those called wise and good, lend themselves to perform the office of inferior and brutal ones. Hence come war and slavery in; and what else may not come in by this opening? But certainly there are modes by which a man may put bread into his mouth which will not prejudice him as a companion and neighbor.

“Now turn again, turn again, said the pindér,
For a wrong way you have gone,
For you have forsaken the king’s highway,
And made a path over the corn.”

Undoubtedly, countless reforms are called for because society is not animated, or instinct enough with life, but in the condition of some snakes which I have seen in early spring, with alternate portions of their bodies torpid and flexible, so that they could wriggle neither way. All men are partially buried in the grave of custom, and of some we see only the crown of the

head above ground. Better are the physically dead, for they more lively rot. Even virtue is no longer such if it be stagnant. A man's life should be constantly as fresh as this river. It should be the same channel, but a new water every instant.

"Virtues as rivers pass,

But still remains that virtuous man there was."

Most men have no inclination, no rapids, no cascades, but marshes, and alligators, and miasma instead. We read that when, in the expedition of Alexander, Onesicritus was sent forward to meet certain of the Indian sect of Gymnosophists, and he had told them of those new philosophers of the West, Pythagoras, Socrates, and Diogenes, and their doctrines, one of them, named Dandamis, answered that "they appeared to him to have been men of genius, but to have lived with too passive a regard for the laws." The philosophers of the West are liable to this rebuke still. "They say that Lieou-hia-hoei and Chao-lien did not sustain to the end their resolutions, and that they dishonored their character. Their language was in harmony with reason and justice; while their acts were in harmony with the sentiments of men."

Chateaubriand said: "There are two things which grow stronger in the breast of man, in proportion as he advances in years, — the love of country and religion. Let them be never so much forgotten in youth, they sooner or later present themselves to us arrayed in all their charms, and excite in the recesses of our hearts an attachment justly due to their beauty." It may be so. But even this infirmity of noble minds marks the gradual

decay of youthful hope and faith. It is the allowed infidelity of age. There is a saying of the Wolofs, "He who was born first has the greatest number of old clothes;" consequently M. Chateaubriand has more old clothes than I have. It is comparatively a faint and reflected beauty that is admired, not an essential and intrinsic one. It is because the old are weak, feel their mortality, and think that they have measured the strength of man. They will not boast; they will be frank and humble. Well, let them have the few poor comforts they can keep. Humility is still a very human virtue. They look back on life, and so see not into the future. The prospect of the young is forward and unbounded, mingling the future with the present. In the declining day the thoughts make haste to rest in darkness, and hardly look forward to the ensuing morning. The thoughts of the old prepare for night and slumber. The same hopes and prospects are not for him who stands upon the rosy mountain-tops of life, and him who expects the setting of his earthly day.

I must conclude that Conscience, if that be the name of it, was not given us for no purpose, or for a hindrance. However flattering order and expediency may look, it is but the repose of a lethargy, and we will choose rather to be awake, though it be stormy, and maintain ourselves on this earth, and in this life, as we may, without signing our death-warrant. Let us see if we cannot stay here, where He has put us, on his own conditions. Does not his law reach as far as his light? The expedients of the nations clash with one another: only the absolutely right is expedient for all.

There are some passages in the *Antigone* of Sophocles, well known to scholars, of which I am reminded in this connection. *Antigone* has resolved to sprinkle sand on the dead body of her brother *Polynices*, notwithstanding the edict of King *Creon* condemning to death that one who should perform this service, which the Greeks deemed so important, for the enemy of his country; but *Ismene*, who is of a less resolute and noble spirit, declines taking part with her sister in this work, and says,—

“I, therefore, asking those under the earth to consider me, that I am compelled to do thus, will obey those who are placed in office; for to do extreme things is not wise.”

Antigone. “I would not ask you, nor would you, if you still wished, do it joyfully with me. Be such as seems good to you. But I will bury him. It is glorious for me doing this to die. I beloved will lie with him beloved, having, like a criminal, done what is holy; since the time is longer which it is necessary for me to please those below, than those here, for there I shall always lie. But if it seems good to you, hold in dishonor things which are honored by the gods.”

Ismene. “I indeed do not hold them in dishonor; but to act in opposition to the citizens I am by nature unable.”

Antigone being at length brought before King *Creon*, he asks, —

“Did you then dare to transgress these laws?”

Antigone. “For it was not *Zeus* who proclaimed these to me, nor *Justice* who dwells with the gods below; it was not they who established these laws among men.

Nor did I think that your proclamations were so strong, as, being a mortal, to be able to transcend the unwritten and immovable laws of the gods. For not something now and yesterday, but forever these live, and no one knows from what time they appeared. I was not about to pay the penalty of violating these to the gods, fearing the presumption of any man. For I well knew that I should die, and why not? even if you had not proclaimed it."

This was concerning the burial of a dead body.

The wisest conservatism is that of the Hindoos. "Immemorial custom is transcendent law," says Menu. That is, it was the custom of the gods before men used it. The fault of our New England custom is that it is memorial. What is morality but immemorial custom? Conscience is the chief of conservatives. "Perform the settled functions," says Kreesna in the Bhagvat-Geeta; "action is preferable to inaction. The journey of thy mortal frame may not succeed from inaction." "A man's own calling, with all its faults, ought not to be forsaken. Every undertaking is involved in its faults as the fire in its smoke." "The man who is acquainted with the whole should not drive those from their works who are slow of comprehension, and less experienced than himself." "Wherefore, O Arjoon, resolve to fight," is the advice of the god to the irresolute soldier who fears to slay his best friends. It is a sublime conservatism; as wide as the world, and as unwearied as time; preserving the universe with Asiatic anxiety, in that state in which it appeared to their minds. These

philosophers dwell on the inevitability and unchangeableness of laws, on the power of temperament and constitution, the three *goon*, or qualities, and the circumstances, or birth and affinity. The end is an immense consolation; eternal absorption in Brahma. Their speculations never venture beyond their own tablelands, though they are high and vast as they. Buoyancy, freedom, flexibility, variety, possibility, which also are qualities of the Unnamed, they deal not with. The undeserved reward is to be earned by an everlasting moral drudgery; the incalculable promise of the morrow is, as it were, weighed. And who will say that their conservatism has not been effectual? "Assuredly," says a French translator, speaking of the antiquity and durability of the Chinese and Indian nations, and of the wisdom of their legislators, "there are some vestiges of the eternal laws which govern the world."

Christianity, on the other hand, is humane, practical, and, in a large sense, radical. So many years and ages of the gods those Eastern sages sat contemplating Brahm, uttering in silence the mystic "Om," being absorbed into the essence of the Supreme Being, never going out of themselves, but subsiding farther and deeper within; so infinitely wise, yet infinitely stagnant; until, at last, in that same Asia, but in the western part of it, appeared a youth, wholly unforetold by them, — not being absorbed into Brahm, but bringing Brahm down to earth and to mankind; in whom Brahm had awaked from his long sleep, and exerted himself, and the day began, — a new avatar. The Brahman had never thought to be a brother of mankind as well

as a child of God. Christ is the prince of Reformers and Radicals. Many expressions in the New Testament come naturally to the lips of all Protestants, and it furnishes the most pregnant and practical texts. There is no harmless dreaming, no wise speculation in it, but everywhere a substratum of good sense. It never *reflects*, but it *repents*. There is no poetry in it, we may say, nothing regarded in the light of beauty merely, but moral truth is its object. All mortals are convicted by its conscience.

The New Testament is remarkable for its pure morality; the best of the Hindoo Scripture, for its pure intellectuality. The reader is nowhere raised into and sustained in a higher, purer, or *rarer* region of thought than in the Bhagvat-Geeta. Warren Hastings, in his sensible letter recommending the translation of this book to the Chairman of the East India Company, declares the original to be "of a sublimity of conception, reasoning, and diction almost unequalled," and that the writings of the Indian philosophers "will survive when the British dominion in India shall have long ceased to exist, and when the sources which it once yielded of wealth and power are lost to remembrance." It is unquestionably one of the noblest and most sacred scriptures which have come down to us. Books are to be distinguished by the grandeur of their topics even more than by the manner in which they are treated. The Oriental philosophy approaches easily loftier themes than the modern aspires to; and no wonder if it sometimes prattle about them. It only assigns their due rank respectively to Action and Contemplation, or

rather does full justice to the latter. Western philosophers have not conceived of the significance of Contemplation in their sense. Speaking of the spiritual discipline to which the Brahmans subjected themselves, and the wonderful power of abstraction to which they attained, instances of which had come under his notice, Hastings says:—

“To those who have never been accustomed to the separation of the mind from the notices of the senses, it may not be easy to conceive by what means such a power is to be attained; since even the most studious men of our hemisphere will find it difficult so to restrain their attention, but that it will wander to some object of present sense or recollection; and even the buzzing of a fly will sometimes have the power to disturb it. But if we are told that there have been men who were successively, for ages past, in the daily habit of abstracted contemplation, begun in the earliest period of youth, and continued in many to the maturity of age, each adding some portion of knowledge to the store accumulated by his predecessors; it is not assuming too much to conclude, that as the mind ever gathers strength, like the body, by exercise, so in such an exercise it may in each have acquired the faculty to which they aspired, and that their collective studies may have led them to the discovery of new tracts and combinations of sentiment, totally different from the doctrines with which the learned of other nations are acquainted; doctrines which, however speculative and subtle, still as they possess the advantage of being derived from a source so free from every adventitious

mixture, may be equally founded in truth with the most simple of our own."

"The forsaking of works" was taught by Kreeshna to the most ancient of men, and handed down from age to age, "until at length, in the course of time, the mighty art was lost."

"In wisdom is to be found every work without exception," says Kreeshna.

"Although thou wert the greatest of all offenders, thou shalt be able to cross the gulf of sin with the bark of wisdom."

"There is not anything in this world to be compared with wisdom for purity."

"The action stands at a distance inferior to the application of wisdom."

The wisdom of a Moonee "is confirmed, when, like the tortoise, he can draw in all his members, and restrain them from their wonted purposes."

"Children only, and not the learned, speak of the speculative and the practical doctrines as two. They are but one. For both obtain the selfsame end, and the place which is gained by the followers of the one is gained by the followers of the other."

"The man enjoyeth not freedom from action, from the non-commencement of that which he hath to do; nor doth he obtain happiness from a total inactivity. No one ever resteth a moment inactive. Every man is involuntarily urged to act by those principles which are inherent in his nature. The man who restraineth his active faculties, and sitteth down with his mind attentive to the objects of his senses, is called one of an

astrayed soul, and the practicer of deceit. So the man is praised, who, having subdued all his passions, performeth with his active faculties all the functions of life, unconcerned about the event."

"Let the motive be in the deed and not in the event. Be not one whose motive for action is the hope of reward. Let not thy life be spent in inaction."

"For the man who doeth that which he hath to do, without affection, obtaineth the Supreme."

"He who may behold as it were inaction in action, and action in inaction, is wise amongst mankind. He is a perfect performer of all duty."

"Wise men call him a *Pandect*, whose every undertaking is free from the idea of desire, and whose actions are consumed by the fire of wisdom. He abandoneth the desire of a reward of his actions; he is always contented and independent; and although he may be engaged in a work, he as it were doeth nothing."

"He is both a Yogee and a Sannyasee who performeth that which he hath to do independent of the fruit thereof; not he who liveth without the sacrificial fire and without action."

"He who enjoyeth but the Amreeta which is left of his offerings obtaineth the eternal spirit of Brahm, the Supreme."

What, after all, does the practicalness of life amount to? The things immediate to be done are very trivial. I could postpone them all to hear this locust sing. The most glorious fact in my experience is not anything that I have done or may hope to do, but a transient thought, or vision, or dream, which I have had. I would give all

the wealth of the world, and all the deeds of all the heroes, for one true vision. But how can I communicate with the gods, who am a pencil-maker on the earth, and not be insane?

"I am the same to all mankind," says Kreeshna; "there is not one who is worthy of my love or hatred."

This teaching is not practical in the sense in which the New Testament is. It is not always sound sense in practice. The Brahman never proposes courageously to assault evil, but patiently to starve it out. His active faculties are paralyzed by the idea of caste, of impassable limits of destiny and the tyranny of time. Kreeshna's argument, it must be allowed, is defective. No sufficient reason is given why Arjoon should fight. Arjoon may be convinced, but the reader is not, for his judgment is *not* "formed upon the speculative doctrines of the *Sankhya Sastra*." "Seek an asylum in wisdom alone;" but what is wisdom to a Western mind? The duty of which he speaks is an arbitrary one. When was it established? The Brahman's virtue consists in doing, not right, but arbitrary things. What is that which a man "hath to do"? What is "action"? What are the "settled functions"? What is "a man's own religion," which is so much better than another's? What is "a man's own particular calling"? What are the duties which are appointed by one's birth? It is a defense of the institution of castes, of what is called the "natural duty" of the Kshetree, or soldier, "to attach himself to the discipline," "not to flee from the field," and the like. But they who are unconcerned about the consequences of their actions are not therefore unconcerned about their actions.

Behold the difference between the Oriental and the Occidental. The former has nothing to do in this world; the latter is full of activity. The one looks in the sun till his eyes are put out; the other follows him prone in his westward course. There is such a thing as caste, even in the West; but it is comparatively faint; it is conservatism here. It says, forsake not your calling, outrage no institution, use no violence, rend no bonds; the State is thy parent. Its virtue or manhood is wholly filial. There is a struggle between the Oriental and Occidental in every nation; some who would be forever contemplating the sun, and some who are hastening toward the sunset. The former class says to the latter, When you have reached the sunset, you will be no nearer to the sun. To which the latter replies, But we so prolong the day. The former "walketh but in that night, when all things go to rest in the night of *time*. The contemplative Moonee sleepeth but in the day of *time*, when all things wake."

To conclude these extracts, I can say, in the words of Sanjay, "As, O mighty Prince! I recollect again and again this holy and wonderful dialogue of Kreeshna and Arjoon, I continue more and more to rejoice; and as I recall to my memory the more than miraculous form of Haree, my astonishment is great, and I marvel and rejoice again and again! Wherever Kreeshna the God of devotion may be, wherever Arjoon the mighty bowman may be, there too, without doubt, are fortune, riches, victory, and good conduct. This is my firm belief."

I would say to the readers of Scriptures, if they wish

for a good book, read the Bhagvat-Geeta, an episode to the Mahabharat, said to have been written by Kreeshna Dwypayen Veias, — known to have been written by —, more than four thousand years ago, — it matters not whether three or four, or when, — translated by Charles Wilkins. It deserves to be read with reverence even by Yankees, as a part of the sacred writings of a devout people; and the intelligent Hebrew will rejoice to find in it a moral grandeur and sublimity akin to those of his own Scriptures.

To an American reader, who, by the advantage of his position, can see over that strip of Atlantic coast to Asia and the Pacific, who, as it were, sees the shore slope upward over the Alps to the Himmaleh Mountains, the comparatively recent literature of Europe often appears partial and clannish; and, notwithstanding the limited range of his own sympathies and studies, the European writer who presumes that he is speaking for the world is perceived by him to speak only for that corner of it which he inhabits. One of the rarest of England's scholars and critics, in his classification of the worthies of the world, betrays the narrowness of his European culture and the exclusiveness of his reading. None of her children has done justice to the poets and philosophers of Persia or of India. They have even been better known to her merchant scholars than to her poets and thinkers by profession. You may look in vain through English poetry for a single memorable verse inspired by these themes. Nor is Germany to be excepted, though her philological industry is indirectly serving the cause of philosophy and poetry. Even

Goethe wanted that universality of genius which could have appreciated the philosophy of India, if he had more nearly approached it. His genius was more practical, dwelling much more in the regions of the understanding, and was less native to contemplation than the genius of those sages. It is remarkable that Homer and a few Hebrews are the most Oriental names which modern Europe, whose literature has taken its rise since the decline of the Persian, has admitted into her list of Worthies, and perhaps the *worthiest* of mankind, and the fathers of modern thinking, — for the contemplations of those Indian sages have influenced, and still influence, the intellectual development of mankind, — whose works even yet survive in wonderful completeness, are, for the most part, not recognized as ever having existed. If the lions had been the painters, it would have been otherwise. In every one's youthful dreams, philosophy is still vaguely but inseparably, and with singular truth, associated with the East, nor do after years discover its local habitation in the Western world. In comparison with the philosophers of the East, we may say that modern Europe has yet given birth to none. Beside the vast and cosmogonical philosophy of the Bhagvat-Geeta, even our Shakespeare seems sometimes youthfully green and practical merely. Some of these sublime sentences, as the Chaldæan oracles of Zoroaster, still surviving after a thousand revolutions and translations, alone make us doubt if the poetic form and dress are not transitory, and not essential to the most effective and enduring expression of thought. *Ex oriente lux* may still be the motto of scholars, for

the Western world has not yet derived from the East all the light which it is destined to receive thence.

It would be worthy of the age to print together the collected Scriptures or Sacred Writings of the several nations, the Chinese, the Hindoos, the Persians, the Hebrews, and others, as the Scripture of mankind. The New Testament is still, perhaps, too much on the lips and in the hearts of men to be called a Scripture in this sense. Such a juxtaposition and comparison might help to liberalize the faith of men. This is a work which Time will surely edit, reserved to crown the labors of the printing-press. This would be the Bible, or Book of Books, which let the missionaries carry to the uttermost parts of the earth.

While engaged in these reflections, thinking ourselves the only navigators of these waters, suddenly a canal-boat, with its sail set, glided round a point before us, like some huge river beast, and changed the scene in an instant; and then another and another glided into sight, and we found ourselves in the current of commerce once more. So we threw our rinds in the water for the fishes to nibble, and added our breath to the life of living men. Little did we think, in the distant garden in which we had planted the seed and reared this fruit, where it would be eaten. Our melons lay at home on the sandy bottom of the Merrimack, and our potatoes in the sun and water at the bottom of the boat looked like a fruit of the country. Soon, however, we were delivered from this fleet of junks, and possessed the river in solitude, once more rowing steadily upward through the noon,

between the territories of Nashua on the one hand and Hudson, once Nottingham, on the other. From time to time we scared up a kingfisher or a summer duck, the former flying rather by vigorous impulses than by steady and patient steering with that short rudder of his, sounding his rattle along the fluvial street.

Ere long another scow hove in sight, creeping down the river; and hailing it, we attached ourselves to its side, and floated back in company, chatting with the boatmen, and obtaining a draught of cooler water from their jug. They appeared to be green hands from far among the hills, who had taken this means to get to the seaboard, and see the world; and would possibly visit the Falkland Isles, and the China seas, before they again saw the waters of the Merrimack, or, perchance, they would not return this way forever. They had already embarked the private interests of the landsman in the larger venture of the race, and were ready to mess with mankind, reserving only the till of a chest to themselves. But they too were soon lost behind a point, and we went croaking on our way alone. What grievance has its root among the New Hampshire hills? we asked; what is wanting to human life here, that these men should make haste to the antipodes? We prayed that their bright anticipations might not be rudely disappointed.

Though all the fates should prove unkind,
Leave not your native land behind.
The ship, becalmed, at length stands still;
The steed must rest beneath the hill;
But swiftly still our fortunes pace
To find us out in every place.

The vessel, though her masts be firm,
Beneath her copper bears a worm;
Around the cape, across the line,
Till fields of ice her course confine;
It matters not how smooth the breeze,
How shallow or how deep the seas,
Whether she bears Manilla twine,
Or in her hold Madeira wine,
Or China teas, or Spanish hides,
In port or quarantine she rides;
Far from New England's blustering shore,
New England's worm her hulk shall bore,
And sink her in the Indian seas,
Twine, wine, and hides, and China teas.

We passed a small desert here on the east bank, between Tyngsborough and Hudson, which was interesting and even refreshing to our eyes in the midst of the almost universal greenness. This sand was indeed somewhat impressive and beautiful to us. A very old inhabitant, who was at work in a field on the Nashua side, told us that he remembered when corn and grain grew there, and it was a cultivated field. But at length the fishermen — for this was a fishing-place — pulled up the bushes on the shore, for greater convenience in hauling their seines, and when the bank was thus broken, the wind began to blow up the sand from the shore, until at length it had covered about fifteen acres several feet deep. We saw near the river, where the sand was blown off down to some ancient surface, the foundation of an Indian wigwam exposed, a perfect circle of burnt stones, four or five feet in diameter, mingled with fine charcoal, and the bones of small animals which had been preserved in the sand. The surrounding sand was sprinkled

with other burnt stones on which their fires had been built, as well as with flakes of arrowhead stone, and we found one perfect arrowhead. In one place we noticed where an Indian had sat to manufacture arrowheads out of quartz, and the sand was sprinkled with a quart of small glass-like chips about as big as a fourpence, which he had broken off in his work. Here, then, the Indians must have fished before the whites arrived. There was another similar sandy tract about half a mile above this.

Still the noon prevailed, and we turned the prow aside to bathe, and recline ourselves under some button-woods, by a ledge of rocks, in a retired pasture sloping to the water's edge and skirted with pines and hazels, in the town of Hudson. Still had India, and that old noon-tide philosophy, the better part of our thoughts.

It is always singular, but encouraging, to meet with common sense in very old books, as the Heetopades of Veeshnoo Sarma; a playful wisdom which has eyes behind as well as before, and oversees itself. It asserts their health and independence of the experience of later times. This pledge of sanity cannot be spared in a book, that it sometimes pleasantly reflect upon itself. The story and fabulous portion of this book winds loosely from sentence to sentence as so many oases in a desert, and is as indistinct as a camel's track between Mourzouk and Darfour. It is a comment on the flow and freshet of modern books. The reader leaps from sentence to sentence, as from one stepping-stone to another, while the stream of the story rushes past unregarded. The Bhagvat-Geeta is less sententious and poetic, perhaps,

but still more wonderfully sustained and developed. Its sanity and sublimity have impressed the minds even of soldiers and merchants. It is the characteristic of great poems that they will yield of their sense in due proportion to the hasty and the deliberate reader. To the practical they will be common sense, and to the wise wisdom; as either the traveler may wet his lips, or an army may fill its water-casks at a full stream.

One of the most attractive of those ancient books that I have met with is the Laws of Menu. According to Sir William Jones, "Vyasa, the son of Parasara, has decided that the Veda, with its Angas, or the six compositions deduced from it, the revealed system of medicine, the Puranas or sacred histories, and the code of Menu, were four works of supreme authority, which ought never to be shaken by arguments merely human." The last is believed by the Hindoos "to have been promulged in the beginning of time, by Menu, son or grandson of Brahma," and "first of created beings;" and Brahma is said to have "taught his laws to Menu in a hundred thousand verses, which Menu explained to the primitive world in the very words of the book now translated." Others affirm that they have undergone successive abridgments for the convenience of mortals, "while the gods of the lower heaven and the band of celestial musicians are engaged in studying the primary code." "A number of glosses or comments on Menu were composed by the Munis, or old philosophers, whose treatises, together with that before us, constitute the Dherma Sastra, in a collective sense, or Body of Law." Culluca Bhatta was one of the more modern of these.

Every sacred book, successively, has been accepted in the faith that it was to be the final resting-place of the sojourning soul; but after all, it was but a caravansary which supplied refreshment to the traveler, and directed him farther on his way to Isphahan or Bagdat. Thank God, no Hindoo tyranny prevailed at the framing of the world, but we are freemen of the universe, and not sentenced to any caste.

I know of no book which has come down to us with grander pretensions than this, and it is so impersonal and sincere that it is never offensive nor ridiculous. Compare the modes in which modern literature is advertised with the prospectus of this book, and think what a reading public it addresses, what criticism it expects. It seems to have been uttered from some eastern summit, with a sober morning prescience in the dawn of time, and you cannot read a sentence without being elevated as upon the table-land of the Ghauts. It has such a rhythm as the winds of the desert, such a tide as the Ganges, and is as superior to criticism as the Himmaleh Mountains. Its tone is of such unrelaxed fibre that even at this late day, unworn by time, it wears the English and the Sanskrit dress indifferently; and its fixed sentences keep up their distant fires still, like the stars, by whose dissipated rays this lower world is illumined. The whole book by noble gestures and inclinations renders many words unnecessary. English sense has toiled, but Hindoo wisdom never perspired. Though the sentences open as we read them, unexpensively, and at first almost unmeaningly, as the petals of a flower, they sometimes startle us with that rare kind of wisdom which could

only have been learned from the most trivial experience; but it comes to us as refined as the porcelain earth which subsides to the bottom of the ocean. They are clean and dry as fossil truths, which have been exposed to the elements for thousands of years, so impersonally and scientifically true that they are the ornament of the parlor and the cabinet. Any *moral* philosophy is exceedingly rare. This of Menu addresses our privacy more than most. It is a more private and familiar, and at the same time a more public and universal word, than is spoken in parlor or pulpit nowadays. As our domestic fowls are said to have their original in the wild pheasant of India, so our domestic thoughts have their prototypes in the thoughts of her philosophers. We are dabbling in the very elements of our present conventional and actual life; as if it were the primeval conventicle, where how to eat, and to drink, and to sleep, and maintain life with adequate dignity and sincerity, were the questions to be decided. It is later and more intimate with us even than the advice of our nearest friends. And yet it is true for the widest horizon, and read out of doors has relation to the dim mountain line, and is native and aboriginal there. Most books belong to the house and street only, and in the fields their leaves feel very thin. They are bare and obvious, and have no halo nor haze about them. Nature lies far and fair behind them all. But this, as it proceeds from, so it addresses, what is deepest and most abiding in man. It belongs to the noontide of the day, the midsummer of the year, and after the snows have melted, and the waters evaporated in the spring, still its truth speaks freshly to our experi-

ence. It helps the sun to shine, and his rays fall on its page to illustrate it. It spends the mornings and the evenings, and makes such an impression on us overnight as to awaken us before dawn, and its influence lingers around us like a fragrance late into the day. It conveys a new gloss to the meadows and the depths of the wood, and its spirit, like a more subtile ether, sweeps along with the prevailing winds of a country. The very locusts and crickets of a summer day are but later or earlier glosses on the Dherma Sastra of the Hindoos, a continuation of the sacred code. As we have said, there is an orientalism in the most restless pioneer, and the farthest west is but the farthest east. While we are reading these sentences, this fair modern world seems only a reprint of the Laws of Menu with the gloss of Culluca. Tried by a New England eye, or the more practical wisdom of modern times, they are the oracles of a race already in its dotage; but held up to the sky, which is the only impartial and incorruptible ordeal, they are of a piece with its depth and serenity, and I am assured that they will have a place and significance as long as there is a sky to test them by.

Give me a sentence which no intelligence can understand. There must be a kind of life and palpitation to it, and under its words a kind of blood must circulate forever. It is wonderful that this sound should have come down to us from so far, when the voice of man can be heard so little way, and we are not now within earshot of any contemporary. The woodcutters have here felled an ancient pine forest, and brought to light to these distant hills a fair lake in the southwest; and now in an instant

it is distinctly shown to these woods as if its image had traveled hither from eternity. Perhaps these old stumps upon the knoll remember when anciently this lake gleamed in the horizon. One wonders if the bare earth itself did not experience emotion at beholding again so fair a prospect. That fair water lies there in the sun thus revealed, so much the prouder and fairer because its beauty needed not to be seen. It seems yet lonely, sufficient to itself and superior to observation. So are these old sentences like serene lakes in the southwest, at length revealed to us, which have so long been reflecting our own sky in their bosom.

The great plain of India lies as in a cup between the Himmaleh and the ocean on the north and south, and the Brahmapootra and Indus on the east and west, wherein the primeval race was received. We will not dispute the story. We are pleased to read in the natural history of the country, of the "pine, larch, spruce, and silver fir," which cover the southern face of the Himmaleh range; of the "gooseberry, raspberry, strawberry," which from an imminent temperate zone overlook the torrid plains. So did this active modern life have even then a foothold and lurking-place in the midst of the stateliness and contemplativeness of those Eastern plains. In another era the "lily of the valley, cowslip, dandelion" were to work their way down into the plain, and bloom in a level zone of their own reaching round the earth. Already has the era of the temperate zone arrived, the era of the pine and the oak, for the palm and the banian do not supply the wants of this age. The lichens on the summits of the rocks will perchance find their level ere long.

As for the tenets of the Brahmans, we are not so much concerned to know what doctrines they held, as that they were held by any. We can tolerate all philosophies, Atomists, Pneumatologists, Atheists, Theists, — Plato, Aristotle, Leucippus, Democritus, Pythagoras, Zoroaster, and Confucius. It is the attitude of these men, more than any communication which they make, that attracts us. Between them and their commentators, it is true, there is an endless dispute. But if it comes to this, that you compare notes, then you are all wrong. As it is, each takes us up into the serene heavens, whither the smallest bubble rises as surely as the largest, and paints earth and sky for us. Any sincere thought is irresistible. The very austerity of the Brahmans is tempting to the devotional soul, as a more refined and nobler luxury. Wants so easily and gracefully satisfied seem like a more refined pleasure. Their conception of creation is peaceful as a dream. “When that power awakes, then has this world its full expansion; but when he slumbers with a tranquil spirit, then the whole system fades away.” In the very indistinctness of their theogony a sublime truth is implied. It hardly allows the reader to rest in any supreme first cause, but directly it hints at a supreamer still which created the last, and the Creator is still behind increate.

Nor will we disturb the antiquity of this Scripture, “From fire, from air, and from the sun,” it was “milked out.” One might as well investigate the chronology of light and heat. Let the sun shine. Menu understood this matter best, when he said, “Those best know the divisions of days and nights who understand that the day of

Brahma, which endures to the end of a thousand such ages [infinite ages, nevertheless, according to mortal reckoning], gives rise to virtuous exertions; and that his night endures as long as his day." Indeed, the Mussulman and Tartar dynasties are beyond all dating. Methinks I have lived under them myself. In every man's brain is the Sanskrit. The Vedas and their Angas are not so ancient as serene contemplation. Why will we be imposed on by antiquity? Is the babe young? When I behold it, it seems more venerable than the oldest man; it is more ancient than Nestor or the Sibyls, and bears the wrinkles of father Saturn himself. And do we live but in the present? How broad a line is that? I sit now on a stump whose rings number centuries of growth. If I look around I see that the soil is composed of the remains of just such stumps, ancestors to this. The earth is covered with mould. I thrust this stick many æons deep into its surface, and with my heel make a deeper furrow than the elements have ploughed here for a thousand years. If I listen, I hear the peep of frogs which is older than the slime of Egypt, and the distant drumming of a partridge on a log, as if it were the pulse-beat of the summer air. I raise my fairest and freshest flowers in the old mould. Why, what we would fain call new is not skin deep; the earth is not yet stained by it. It is not the fertile ground which we walk on, but the leaves which flutter over our heads. The newest is but the oldest made visible to our senses. When we dig up the soil from a thousand feet below the surface, we call it new, and the plants which spring from it; and when our vision pierces deeper into space, and detects a

remoter star, we call that new also. The place where we sit is called Hudson, — once it was Nottingham, — once —

We should read history as little critically as we consider the landscape, and be more interested by the atmospheric tints and various lights and shades which the intervening spaces create than by its groundwork and composition. It is the morning now turned evening and seen in the west, — the same sun, but a new light and atmosphere. Its beauty is like the sunset; not a fresco painting on a wall, flat and bounded, but atmospheric and roving or free. In reality, history fluctuates as the face of the landscape from morning to evening. What is of moment is its hue and color. Time hides no treasures; we want not its *then*, but its *now*. We do not complain that the mountains in the horizon are blue and indistinct; they are the more like the heavens.

Of what moment are facts that can be lost, — which need to be commemorated? The monument of death will outlast the memory of the dead. The Pyramids do not tell the tale which was confided to them; the living fact commemorates itself. Why look in the dark for light? Strictly speaking, the historical societies have not recovered one fact from oblivion, but are themselves instead of the fact that is lost. The researcher is more memorable than the researched. The crowd stood admiring the mist and the dim outlines of the trees seen through it, when one of their number advanced to explore the phenomenon, and with fresh admiration all eyes were turned on his dimly retreating figure. It is

astonishing with how little coöperation of the societies the past is remembered. Its story has indeed had another muse than has been assigned it. There is a good instance of the manner in which all history began, in Alwákidis' Arabian Chronicle: "I was informed by *Ahmed Almatin Aljorhami*, who had it from *Rephâa Ebn Kais Alámiri*, who had it from *Saiph Ebn Fabalah Alchâtquarmi*, who had it from *Thabet Ebn Alkamah*, who said he was present at the action." These fathers of history were not anxious to preserve, but to learn the fact; and hence it was not forgotten. Critical acumen is exerted in vain to uncover the past; the *past* cannot be *presented*; we cannot know what we are not. But one veil hangs over past, present, and future, and it is the province of the historian to find out, not what was, but what is. Where a battle has been fought, you will find nothing but the bones of men and beasts; where a battle is being fought, there are hearts beating. We will sit on a mound and muse, and not try to make these skeletons stand on their legs again. Does Nature remember, think you, that they *were* men, or not rather that they *are* bones?

Ancient history has an air of antiquity. It should be more modern. It is written as if the spectator should be thinking of the backside of the picture on the wall, or as if the author expected that the dead would be his readers, and wished to detail to them their own experience. Men seem anxious to accomplish an orderly retreat through the centuries, earnestly rebuilding the works behind, as they are battered down by the encroachments of time; but while they loiter, they and

their works both fall a prey to the arch enemy. History has neither the venerableness of antiquity, nor the freshness of the modern. It does as if it would go to the beginning of things, which natural history might with reason assume to do; but consider the Universal History, and then tell us, — when did burdock and plantain sprout first? It has been so written, for the most part, that the times it describes are with remarkable propriety called *dark ages*. They are dark, as one has observed, because we are so in the dark about them. The sun rarely shines in history, what with the dust and confusion; and when we meet with any cheering fact which implies the presence of this luminary, we excerpt and modernize it. As when we read in the history of the Saxons that Edwin of Northumbria “caused stakes to be fixed in the highways where he had seen a clear spring,” and “brazen dishes were chained to them to refresh the weary sojourner, whose fatigues Edwin had himself experienced.” This is worth all Arthur’s twelve battles.

“Thro’ the shadow of the globe we sweep into the younger day;
Better fifty years of Europe than a cycle of Cathay.”
Than fifty years of Europe better one New England ray!

Biography, too, is liable to the same objection; it should be autobiography. Let us not, as the Germans advise, endeavor to go abroad and vex our bowels that we may be somebody else to explain him. If I am not I, who will be?

But it is fit that the Past should be dark; though the darkness is not so much a quality of the past as of tradition. It is not a distance of time, but a distance of relation, which makes thus dusky its memorials. What

is near to the heart of this generation is fair and bright still. Greece lies outspread fair and sunshiny in floods of light, for there is the sun and daylight in her literature and art. Homer does not allow us to forget that the sun shone, — nor Phidias, nor the Parthenon. Yet no era has been wholly dark, nor will we too hastily submit to the historian, and congratulate ourselves on a blaze of light. If we could pierce the obscurity of those remote years, we should find it light enough; only *there* is not our day. Some creatures are made to see in the dark. There has always been the same amount of light in the world. The new and missing stars, the comets and eclipses, do not affect the general illumination, for only our glasses appreciate them. The eyes of the oldest fossil remains, they tell us, indicate that the same laws of light prevailed then as now. Always the laws of light are the same, but the modes and degrees of seeing vary. The gods are partial to no era, but steadily shines their light in the heavens, while the eye of the beholder is turned to stone. There was but the sun and the eye from the first. The ages have not added a new ray to the one, nor altered a fibre of the other.

If we will admit time into our thoughts at all, the mythologies, those vestiges of ancient poems, wrecks of poems, so to speak, the world's inheritance, still reflecting some of their original splendor, like the fragments of clouds tinted by the rays of the departed sun; reaching into the latest summer day, and allying this hour to the morning of creation; as the poet sings: —

“Fragments of the lofty strain
Float down the tide of years,

As buoyant on the stormy main
A parted wreck appears," —

these are the materials and hints for a history of the rise and progress of the race; how, from the condition of ants, it arrived at the condition of men, and arts were gradually invented. Let a thousand surmises shed some light on this story. We will not be confined by historical, even geological periods which would allow us to doubt of a progress in human affairs. If we rise above this wisdom for the day, we shall expect that this morning of the race, in which it has been supplied with the simplest necessities, with corn, and wine, and honey, and oil, and fire, and articulate speech, and agricultural and other arts, reared up by degrees from the condition of ants to men, will be succeeded by a day of equally progressive splendor; that, in the lapse of the divine periods, other divine agents and godlike men will assist to elevate the race as much above its present condition.

But we do not know much about it.

Thus did one voyageur waking dream, while his companion slumbered on the bank. Suddenly a boatman's horn was heard echoing from shore to shore, to give notice of his approach to the farmer's wife with whom he was to take his dinner, though in that place only muskrats and kingfishers seemed to hear. The current of our reflections and our slumbers being thus disturbed, we weighed anchor once more.

As we proceeded on our way in the afternoon, the western bank became lower, or receded farther from the channel in some places, leaving a few trees only to fringe

the water's edge; while the eastern rose abruptly here and there into wooded hills fifty or sixty feet high. The bass (*Tilia Americana*), also called the lime or linden, which was a new tree to us, overhung the water with its broad and rounded leaf, interspersed with clusters of small hard berries now nearly ripe, and made an agreeable shade for us sailors. The inner bark of this genus is the bast, the material of the fisherman's matting, and the ropes and peasant's shoes of which the Russians make so much use, and also of nets and a coarse cloth in some places. According to poets, this was once Philyra, one of the Oceanides. The ancients are said to have used its bark for the roofs of cottages, for baskets, and for a kind of paper called Philyra. They also made bucklers of its wood, "on account of its flexibility, lightness, and resiliency." It was once much used for carving, and is still in demand for sounding-boards of pianofortes and panels of carriages, and for various uses for which toughness and flexibility are required. Baskets and cradles are made of the twigs. Its sap affords sugar, and the honey made from its flowers is said to be preferred to any other. Its leaves are in some countries given to cattle, a kind of chocolate has been made of its fruit, a medicine has been prepared from an infusion of its flowers, and finally, the charcoal made of its wood is greatly valued for gunpowder.

The sight of this tree reminded us that we had reached a strange land to us. As we sailed under this canopy of leaves, we saw the sky through its chinks, and, as it were, the meaning and idea of the tree stamped in a thousand hieroglyphics on the heavens. The universe

is so aptly fitted to our organization that the eye wanders and reposes at the same time. On every side there is something to soothe and refresh this sense. Look up at the tree-tops, and see how finely Nature finishes off her work there. See how the pines spire without end higher and higher, and make a graceful fringe to the earth. And who shall count the finer cobwebs that soar and float away from their utmost post, and the myriad insects that dodge between them? Leaves are of more various forms than the alphabets of all languages put together; of the oaks alone there are hardly two alike, and each expresses its own character.

In all her products, Nature only develops her simplest germs. One would say that it was no great stretch of invention to create birds. The hawk which now takes his flight over the top of the wood was at first, perchance, only a leaf which fluttered in its aisles. From rustling leaves she came in the course of ages to the loftier flight and clear carol of the bird.

Salmon Brook comes in from the west under the railroad, a mile and a half below the village of Nashua. We rowed up far enough into the meadows which border it to learn its piscatorial history from a haymaker on its banks. He told us that the silver eel was formerly abundant here, and pointed to some sunken creels at its mouth. This man's memory and imagination were fertile in fishermen's tales of floating isles in bottomless ponds, and of lakes mysteriously stocked with fishes, and would have kept us till nightfall to listen, but we could not afford to loiter in this roadstead, and so stood out to our sea again. Though we never trod in those

meadows, but only touched their margin with our hands, we still retain a pleasant memory of them.

Salmon Brook, whose name is said to be a translation from the Indian, was a favorite haunt of the aborigines. Here, too, the first white settlers of Nashua planted, and some dents in the earth where their houses stood and the wrecks of ancient apple trees are still visible. About one mile up this stream stood the house of old John Lovewell, who was an ensign in the army of Oliver Cromwell, and the father of "famous Captain Lovewell." He settled here before 1690, and died about 1754, at the age of one hundred and twenty years. He is thought to have been engaged in the famous Narragansett swamp fight, which took place in 1675, before he came here. The Indians are said to have spared him in succeeding wars on account of his kindness to them. Even in 1700 he was so old and gray-headed that his scalp was worth nothing, since the French governor offered no bounty for such. I have stood in the dent of his cellar on the bank of the brook, and talked there with one whose grandfather had — whose father might have — talked with Lovewell. Here also he had a mill in his old age, and kept a small store. He was remembered by some who were recently living, as a hale old man who drove the boys out of his orchard with his cane. Consider the triumphs of the mortal man, and what poor trophies it would have to show, to wit: He cobbled shoes without glasses at a hundred, and cut a handsome swath at a hundred and five! Lovewell's house is said to have been the first which Mrs. Dustan reached on her escape from the Indians. Here, probably, the hero of Pequawket was

born and bred. Close by may be seen the cellar and the gravestone of Joseph Hassell, who, as is elsewhere recorded, with his wife Anna, and son Benjamin, and Mary Marks, "were slain by our Indian enemies on September 2, [1691], in the evening." As Gookin observed on a previous occasion, "The Indian rod upon the English backs had not yet done God's errand." Salmon Brook near its mouth is still a solitary stream, meandering through woods and meadows, while the then uninhabited mouth of the Nashua now resounds with the din of a manufacturing town.

A stream from Otternic Pond in Hudson comes in just above Salmon Brook, on the opposite side. There was a good view of Uncannunuc, the most conspicuous mountain in these parts, from the bank here, seen rising over the west end of the bridge above. We soon after passed the village of Nashua, on the river of the same name, where there is a covered bridge over the Merrimack. The Nashua, which is one of the largest tributaries, flows from Wachusett Mountain, through Lancaster, Groton, and other towns, where it has formed well-known elm-shaded meadows, but near its mouth it is obstructed by falls and factories, and did not tempt us to explore it.

Far away from here, in Lancaster, with another companion, I have crossed the broad valley of the Nashua, over which we had so long looked westward from the Concord hills without seeing it to the blue mountains in the horizon. So many streams, so many meadows and woods and quiet dwellings of men had lain concealed between us and those Delectable Moun-

tains; — from yonder hill on the road to Tyngsborough you may get a good view of them. There where it seemed uninterrupted forest to our youthful eyes, between two neighboring pines in the horizon, lay the valley of the Nashua, and this very stream was even then winding at its bottom, and then, as now, it was here silently mingling its waters with the Merrimack. The clouds which floated over its meadows and were born there, seen far in the west, gilded by the rays of the setting sun, had adorned a thousand evening skies for us. But as it were by a turf wall this valley was concealed, and in our journey to those hills it was first gradually revealed to us. Summer and winter our eyes had rested on the dim outline of the mountains, to which distance and indistinctness lent a grandeur not their own, so that they served to interpret all the allusions of poets and travelers. Standing on the Concord Cliffs, we thus spoke our mind to them: —

With frontier strength ye stand your ground,
With grand content ye circle round,
Tumultuous silence for all sound,
Ye distant nursery of rills,
Monadnock and the Peterborough Hills; —
Firm argument that never stirs,
Outcircling the philosophers, —
Like some vast fleet,
Sailing through rain and sleet,
Through winter's cold and summer's heat;

Still holding on upon your high emprise,
Until ye find a shore amid the skies;
Not skulking close to land,
With cargo contraband,

For they who sent a venture out by ye
Have set the Sun to see
Their honesty.
Ships of the line, each one,
Ye westward run,
Convoing clouds,
Which cluster in your shrouds,
Always before the gale,
Under a press of sail,
With weight of metal all untold, —
I seem to feel ye in my firm seat here,
Immeasurable depth of hold,
And breadth of beam, and length of running gear.

Methinks ye take luxurious pleasure
In your novel Western leisure;
So cool your brows and freshly blue,
As Time had naught for ye to do:
For ye lie at your length,
An unappropriated strength,
Unhewn primeval timber,
For knees so stiff, for masts so limber;
The stock of which new earths are made,
One day to be our *Western* trade,
Fit for the stanchions of a world
Which through the seas of space is hurled.

While we enjoy a lingering ray,
Ye still o'ertop the western day,
Reposing yonder on God's croft
Like solid stacks of hay;
So bold a line as ne'er was writ
On any page by human wit;
The forest glows as if
An enemy's camp-fires shone
Along the horizon,
Or the day's funeral pyre
Were lighted there;

Edged with silver and with gold,
The clouds hang o'er in damask fold,
And with such depth of amber light
The west is dight,
Where still a few rays slant,
That even Heaven seems extravagant.
Watatic Hill
Lies on the horizon's sill
Like a child's toy left overnight,
And other duds to left and right,
On the earth's edge, mountains and trees
Stand as they were on air graven,
Or as the vessels in a haven
Await the morning breeze.
I fancy even
Through your defiles windeth the way to heaven;
And yonder still, in spite of history's page,
Linger the golden and the silver age;
Upon the laboring gale
The news of future centuries is brought,
And of new dynasties of thought,
From your remotest vale.

But special I remember thee,
Wachusett, who like me
Standest alone without society.
Thy far blue eye,
A remnant of the sky,
Seen through the clearing or the gorge,
Or from the windows of the forge,
Doth leaven all it passes by.
Nothing is true
But stands 'tween me and you,
Thou Western pioneer,
Who know'st not shame nor fear,
By venturous spirit driven
Under the eaves of heaven;
And canst expand thee there,

And breathe enough of air?
Even beyond the West
Thou migratest,
Into unclouded tracts,
Without a pilgrim's axe,
Cleaving thy road on high
With thy well-tempered brow,
And mak'st thyself a clearing in the sky.
Upholding heaven, holding down earth,
Thy pastime from thy birth;
Not steadied by the one, nor leaning on the other,
May I approve myself thy worthy brother !

At length, like Rasselas and other inhabitants of happy valleys, we had resolved to scale the blue wall which bounded the western horizon, though not without misgivings that thereafter no visible fairyland would exist for us. But it would be long to tell of our adventures, and we have no time this afternoon, transporting ourselves in imagination up this hazy Nashua valley, to go over again that pilgrimage. We have since made many similar excursions to the principal mountains of New England and New York, and even far in the wilderness, and have passed a night on the summit of many of them. And now, when we look again westward from our native hills, Wachusett and Monadnock have retreated once more among the blue and fabulous mountains in the horizon, though our eyes rest on the very rocks on both of them where we have pitched our tent for a night, and boiled our hasty-pudding amid the clouds.

As late as 1724 there was no house on the north side of the Nashua, but only scattered wigwams and grisly

forests between this frontier and Canada. In September of that year, two men who were engaged in making turpentine on that side — for such were the first enterprises in the wilderness — were taken captive and carried to Canada by a party of thirty Indians. Ten of the inhabitants of Dunstable, going to look for them, found the hoops of their barrel cut, and the turpentine spread on the ground. I have been told by an inhabitant of Tyngsborough, who had the story from his ancestors, that one of these captives, when the Indians were about to upset his barrel of turpentine, seized a pine knot and, flourishing it, swore so resolutely that he would kill the first who touched it, that they refrained, and when at length he returned from Canada he found it still standing. Perhaps there was more than one barrel. However this may have been, the scouts knew by marks on the trees, made with coal mixed with grease, that the men were not killed, but taken prisoners. One of the company, named Farwell, perceiving that the turpentine had not done spreading, concluded that the Indians had been gone but a short time, and they accordingly went in instant pursuit. Contrary to the advice of Farwell, following directly on their trail up the Merrimack, they fell into an ambuscade near Thornton's Ferry, in the present town of Merrimack, and nine were killed, only one, Farwell, escaping after a vigorous pursuit. The men of Dunstable went out and picked up their bodies, and carried them all down to Dunstable and buried them. It is almost word for word as in the Robin Hood ballad: —

“They carried these foresters into fair Nottingham,
As many there did know,

They digged them graves in their churchyard,
And they buried them all a-row."

Nottingham is only the other side of the river, and they were not exactly all a-row. You may read in the churchyard at Dunstable, under the "Memento Mori," and the name of one of them, how they "departed this life," and

"This man with seven more that lies in
this grave was slew all in a day by
the Indians."

The stones of some others of the company stand around the common grave with their separate inscriptions. Eight were buried here, but nine were killed, according to the best authorities.

"Gentle river, gentle river,
Lo, thy streams are stained with gore,
Many a brave and noble captain
Floats along thy willowed shore.

"All beside thy limpid waters,
All beside thy sands so bright,
Indian Chiefs and Christian warriors
Joined in fierce and mortal fight."

It is related in the History of Dunstable that on the return of Farwell the Indians were engaged by a fresh party, which they compelled to retreat, and pursued as far as the Nashua, where they fought across the stream at its mouth. After the departure of the Indians, the figure of an Indian's head was found carved by them on a large tree by the shore, which circumstance has given its name to this part of the village of Nashville, — the "Indian Head." "It was observed by some judicious," says Gookin, referring to Philip's War, "that at the

beginning of the war the English soldiers made a nothing of the Indians, and many spake words to this effect, that one Englishman was sufficient to chase ten Indians; many reckoned it was no other but *Veni, vidi, vici.*" But we may conclude that the judicious would by this time have made a different observation.

Farwell appears to have been the only one who had studied his profession, and understood the business of hunting Indians. He lived to fight another day, for the next year he was Lovewell's lieutenant at Pequawket, but that time, as we have related, he left his bones in the wilderness. His name still reminds us of twilight days and forest scouts on Indian trails, with an uneasy scalp; — an indispensable hero to New England. As the more recent poet of Lovewell's fight has sung, halting a little but bravely still, —

"Then did the crimson streams that flowed
Seem like the waters of the brook,
That brightly shine, that loudly dash,
Far down the cliffs of Agiochook."

These battles sound incredible to us. I think that posterity will doubt if such things ever were, — if our bold ancestors who settled this land were not struggling rather with the forest shadows, and not with a copper-colored race of men. They were vapors, fever and ague of the unsettled woods. Now, only a few arrowheads are turned up by the plow. In the Pelasgic, the Etruscan, or the British story, there is nothing so shadowy and unreal.

It is a wild and antiquated looking graveyard, over-

grown with bushes, on the highroad, about a quarter of a mile from and overlooking the Merrimack, with a deserted mill-stream bounding it on one side, where lie the earthly remains of the ancient inhabitants of Dunstable. We passed it three or four miles below here. You may read there the names of Lovewell, Farwell, and many others whose families were distinguished in Indian warfare. We noticed there two large masses of granite more than a foot thick and rudely squared, lying flat on the ground over the remains of the first pastor and his wife.

It is remarkable that the dead lie everywhere under stones, —

“*Strata jacent passim suo quaeque sub” lapide —*

corpora, we might say, if the measure allowed. When the stone is a slight one, it does not oppress the spirits of the traveler to meditate by it; but these did seem a little heathenish to us; and so are all large monuments over men’s bodies, from the Pyramids down. A monument should at least be “star-y-pointing,” to indicate whither the spirit is gone, and not prostrate, like the body it has deserted. There have been some nations who could do nothing but construct tombs, and these are the only traces which they have left. They are the heathen. But why these stones, so upright and emphatic, like exclamation-points? What was there so remarkable that lived? Why should the monument be so much more enduring than the fame which it is designed to perpetuate, — a stone to a bone? “Here lies,” — “Here lies;” — why do they not sometimes write, There rises? Is it

a monument to the body only that is intended? "Having reached the term of his *natural* life;" — would it not be truer to say, Having reached the term of his *unnatural* life? The rarest quality in an epitaph is truth. If any character is given, it should be as severely true as the decision of the three judges below, and not the partial testimony of friends. Friends and contemporaries should supply only the name and date, and leave it to posterity to write the epitaph.

Here lies an honest man,
Rear-Admiral Van.

Faith, then ye have
Two in one grave,
For in his favor,
Here too lies the Engraver.

Fame itself is but an epitaph; as late, as false, as true. But they only are the true epitaphs which Old Mortality retouches.

A man might well pray that he may not taboo or curse any portion of nature by being buried in it. For the most part, the best man's spirit makes a fearful sprite to haunt his grave, and it is therefore much to the credit of Little John, the famous follower of Robin Hood, and reflecting favorably on his character, that his grave was "long celebrious for the yielding of excellent whetstones." I confess that I have but little love for such collections as they have at the Catacombs, Père la Chaise, Mount Auburn, and even this Dunstable graveyard. At any rate, nothing but great antiquity can make graveyards interesting to me. I have no friends there. It may be

that I am not competent to write the poetry of the grave. The farmer who has skimmed his farm might perchance leave his body to Nature to be plowed in, and in some measure restore its fertility. We should not retard but forward her economies.

Soon the village of Nashua was out of sight, and the woods were gained again, and we rowed slowly on before sunset, looking for a solitary place in which to spend the night. A few evening clouds began to be reflected in the water, and the surface was dimpled only here and there by a muskrat crossing the stream. We camped at length near Penichook Brook, on the confines of what is now Nashville, by a deep ravine, under the skirts of a pine wood, where the dead pine leaves were our carpet, and their tawny boughs stretched overhead. But fire and smoke soon tamed the scene; the rocks consented to be our walls, and the pines our roof. A woodside was already the fittest locality for us.

The wilderness is near as well as dear to every man. Even the oldest villages are indebted to the border of wild wood which surrounds them, more than to the gardens of men. There is something indescribably inspiriting and beautiful in the aspect of the forest skirting and occasionally jutting into the midst of new towns, which, like the sand-heaps of fresh fox-burrows, have sprung up in their midst. The very uprightness of the pines and maples asserts the ancient rectitude and vigor of nature. Our lives need the relief of such a background, where the pine flourishes and the jay still screams.

We had found a safe harbor for our boat, and as the

sun was setting carried up our furniture, and soon arranged our house upon the bank, and while the kettle steamed at the tent door, we chatted of distant friends and of the sights which we were to behold, and wondered which way the towns lay from us. Our cocoa was soon boiled, and supper set upon our chest, and we lengthened out this meal, like old voyageurs, with our talk. Meanwhile we spread the map on the ground, and read in the *Gazetteer* when the first settlers came here and got a township granted. Then, when supper was done and we had written the journal of our voyage, we wrapped our buffaloes about us and lay down with our heads pillowed on our arms, listening awhile to the distant baying of a dog, or the murmurs of the river, or to the wind, which had not gone to rest: —

The western wind came lumbering in,
Bearing a faint Pacific din,
Our evening mail, swift at the call
Of its Postmaster-General;
Laden with news from Californ',
Whate'er transpired hath since morn,
How wags the world by brier and brake
From hence to Athabasca Lake; —

or half awake and half asleep, dreaming of a star which glimmered through our cotton roof. Perhaps at midnight one was awakened by a cricket shrilly singing on his shoulder, or by a hunting spider in his eye, and was lulled asleep again by some streamlet purling its way along at the bottom of a wooded and rocky ravine in our neighborhood. It was pleasant to lie with our heads so low in the grass, and hear what a tinkling, ever-busy

laboratory it was. A thousand little artisans beat on their anvils all night long.

Far in the night, as we were falling asleep on the bank of the Merrimack, we heard some tyro beating a drum incessantly, in preparation for a country muster, as we learned, and we thought of the line, —

“When the drum beat at dead of night.”

We could have assured him that his beat would be answered, and the forces be mustered. Fear not, thou drummer of the night; we too will be there. And still he drummed on in the silence and the dark. This stray sound from a far-off sphere came to our ears from time to time, far, sweet, and significant, and we listened with such an unprejudiced sense as if for the first time we heard at all. No doubt he was an insignificant drummer enough, but his music afforded us a prime and leisure hour, and we felt that we were in season wholly. These simple sounds related us to the stars. Ay, there was a logic in them so convincing that the combined sense of mankind could never make me doubt their conclusions. I stop my habitual thinking, as if the plow had suddenly run deeper in its furrow through the crust of the world. How can I go on, who have just stepped over such a bottomless skylight in the bog of my life? Suddenly old Time winked at me, — Ah, you know me, you rogue, — and news had come that IT was well. That ancient universe is in such capital health, I think undoubtedly it will never die. Heal yourselves, doctors; by God I live.

Then idle Time ran gadding by
And left me with Eternity alone;

I hear beyond the range of sound,
I see beyond the verge of sight, —

I see, smell, taste, hear, feel, that everlasting Something to which we are allied, at once our maker, our abode, our destiny, our very Selves; the one historic truth, the most remarkable fact which can become the distinct and uninvited subject of our thought, the actual glory of the universe; the only fact which a human being cannot avoid recognizing, or in some way forget or dispense with.

It doth expand my privacies
To all, and leave me single in the crowd.

I have seen how the foundations of the world are laid, and I have not the least doubt that it will stand a good while.

Now chiefly is my natal hour,
And only now my prime of life.
I will not doubt the love untold,
Which not my worth nor want hath bought,
Which wooed me young and woos me old,
And to this evening hath me brought.

What are ears? what is Time? that this particular series of sounds called a strain of music, an invisible and fairy troop which never brushed the dew from any mead, can be wafted down through the centuries from Homer to me, and he have been conversant with that same aerial and mysterious charm which now so tingles my ears? What a fine communication from age to age, of the fairest and noblest thoughts, the aspirations of ancient men, even such as were never communicated by speech, is music! It is the flower of language, thought colored and curved, fluent and flexible, its crystal foun-

tain tinged with the sun's rays, and its purling ripples reflecting the grass and the clouds. A strain of music reminds me of a passage of the Vedas, and I associate with it the idea of infinite remoteness, as well as of beauty and serenity, for to the senses that is farthest from us which addresses the greatest depth within us. It teaches us again and again to trust the remotest and finest as the divinest instinct, and makes a dream our only real experience. We feel a sad cheer when we hear it, perchance because we that hear are not one with that which is heard.

Therefore a torrent of sadness deep

Through the strains of thy triumph is heard to sweep.

The sadness is ours. The Indian poet Calidas says in the *Sacountala*: "Perhaps the sadness of men on seeing beautiful forms and hearing sweet music arises from some faint remembrance of past joys, and the traces of connections in a former state of existence." As polishing expresses the vein in marble, and grain in wood, so music brings out what of heroic lurks anywhere. The hero is the sole patron of music. That harmony which exists naturally between the hero's moods and the universe, the soldier would fain imitate with drum and trumpet. When we are in health, all sounds fife and drum for us; we hear the notes of music in the air, or catch its echoes dying away when we awake in the dawn. Marching is when the pulse of the hero beats in unison with the pulse of Nature, and he steps to the measure of the universe; then there is true courage and invincible strength.

Plutarch says that "Plato thinks the gods never gave

men music, the science of melody and harmony, for mere delectation or to tickle the ear; but that the discordant parts of the circulations and beauteous fabric of the soul, and that of it that roves about the body, and many times, for want of tune and air, breaks forth into many extravagances and excesses, might be sweetly recalled and artfully wound up to their former consent and agreement."

Music is the sound of the universal laws promulgated. It is the only assured tone. There are in it such strains as far surpass any man's faith in the loftiness of his destiny. Things are to be learned which it will be worth the while to learn. Formerly I heard these

RUMORS FROM AN ÆOLIAN HARP

There is a vale which none hath seen,
Where foot of man has never been,
Such as here lives with toil and strife,
An anxious and a sinful life.

There every virtue has its birth,
Ere it descends upon the earth,
And thither every deed returns,
Which in the generous bosom burns.

There love is warm, and youth is young,
And poetry is yet unsung,
For Virtue still adventures there,
And freely breathes her native air.

And ever, if you hearken well,
You still may hear its vesper bell,
And tread of high-souled men go by,
Their thoughts conversing with the sky.

According to Jamblichus, "Pythagoras did not pro-

cure for himself a thing of this kind through instruments or the voice, but employing a certain ineffable divinity, and which it is difficult to apprehend, he extended his ears and fixed his intellect in the sublime symphonies of the world, he alone hearing and understanding, as it appears, the universal harmony and consonance of the spheres, and the stars that are moved through them, and which produce a fuller and more intense melody than anything effected by mortal sounds."

Traveling on foot very early one morning due east from here about twenty miles, from Caleb Harriman's tavern in Hampstead toward Haverhill, when I reached the railroad in Plaistow, I heard at some distance a faint music in the air like an Æolian harp, which I immediately suspected to proceed from the cord of the telegraph vibrating in the just awakening morning wind, and applying my ear to one of the posts I was convinced that it was so. It was the telegraph harp singing its message through the country, its message sent not by men, but by gods. Perchance, like the statue of Memnon, it resounds only in the morning, when the first rays of the sun fall on it. It was like the first lyre or shell heard on the sea-shore, — that vibrating cord high in the air over the shores of earth. So have all things their higher and their lower uses. I heard a fairer news than the journals ever print. It told of things worthy to hear, and worthy of the electric fluid to carry the news of, not of the price of cotton and flour, but it hinted at the price of the world itself and of things which are priceless, of absolute truth and beauty.

Still the drum rolled on, and stirred our blood to fresh

extravagance that night. The clarion sound and clang of corselet and buckler were heard from many a hamlet of the soul, and many a knight was arming for the fight behind the encamped stars.

“Before each van
Prick forth the aery knights, and couch their spears
Till thickest legions close; with feats of arms
From either end of Heaven the welkin burns.”

Away! away! away! away!
Ye have not kept your secret well,
I will abide that other day,
Those other lands ye tell.

Has time no leisure left for these,
The acts that ye rehearse?
Is not eternity a lease
For better deeds than verse?

’T is sweet to hear of heroes dead,
To know them still alive,
But sweeter if we earn their bread,
And in us they survive.

Our life should feed the springs of fame
With a perennial wave,
As ocean feeds the babbling founts
Which find in it their grave.

Ye skies, drop gently round my breast,
And be my corselet blue,
Ye earth, receive my lance in rest,
My faithful charger you;

Ye stars, my spear-heads in the sky,
My arrow-tips ye are;
I see the routed foemen fly,
My bright spears fixèd are.

Give me an angel for a foe,
Fix now the place and time,
And straight to meet him I will go
Above the starry chime.

And with our clashing bucklers' clang
The heavenly spheres shall ring,
While bright the northern lights shall hang
Beside our tourneying.

And if she lose her champion true,
Tell Heaven not despair,
For I will be her champion new,
Her fame I will repair.

There was a high wind this night, which we afterwards learned had been still more violent elsewhere, and had done much injury to the corn-fields far and near; but we only heard it sigh from time to time, as if it had no license to shake the foundations of our tent; the pines murmured, the water rippled, and the tent rocked a little, but we only laid our ears closer to the ground, while the blast swept on to alarm other men, and long before sunrise we were ready to pursue our voyage as usual.

TUESDAY

On either side the river lie
Long fields of barley and of rye,
That clothe the wold and meet the sky;
And through the fields the road runs by
To many-towered Camelot. — TENNYSON.

LONG before daylight we ranged abroad, hatchet in hand, in search of fuel, and made the yet slumbering and dreaming wood resound with our blows. Then with our fire we burned up a portion of the loitering night, while the kettle sang its homely strain to the morning star. We tramped about the shore, waked all the muskrats, and scared up the bittern and birds that were asleep upon their roosts; we hauled up and upset our boat, and washed it and rinsed out the clay, talking aloud as if it were broad day, until at length, by three o'clock, we had completed our preparations and were ready to pursue our voyage as usual; so, shaking the clay from our feet, we pushed into the fog.

Though we were enveloped in mist as usual, we trusted that there was a bright day behind it.

Ply the oars ! away ! away !
In each dewdrop of the morning
Lies the promise of a day.

Rivers from the sunrise flow,
Springing with the dewy morn;
Voyageurs 'gainst time do row,
Idle noon nor sunset know,
Ever even with the dawn.

Belknap, the historian of this State, says that "in the neighborhood of fresh rivers and ponds, a whitish fog in the morning lying over the water is a sure indication of fair weather for that day; and when no fog is seen, rain is expected before night." That which seemed to us to invest the world was only a narrow and shallow wreath of vapor stretched over the channel of the Merrimack from the seaboard to the mountains. More extensive fogs, however, have their own limits. I once saw the day break from the top of Saddle-back Mountain in Massachusetts, above the clouds. As we cannot distinguish objects through this dense fog, let me tell this story more at length.

I had come over the hills on foot and alone in serene summer days, plucking the raspberries by the wayside, and occasionally buying a loaf of bread at a farmer's house, with a knapsack on my back which held a few traveler's books and a change of clothing, and a staff in my hand. I had that morning looked down from the Hoosack Mountain, where the road crosses it, on the village of North Adams in the valley three miles away under my feet, showing how uneven the earth may sometimes be, and making it seem an accident that it should ever be level and convenient for the feet of man. Putting a little rice and sugar and a tin cup into my knapsack at this village, I began in the afternoon to ascend the mountain, whose summit is three thousand six hundred feet above the level of the sea, and was seven or eight miles distant by the path. My route lay up a long and spacious valley called the Bellows, because

the winds rush up or down it with violence in storms, sloping up to the very clouds between the principal range and a lower mountain. There were a few farms scattered along at different elevations, each commanding a fine prospect of the mountains to the north, and a stream ran down the middle of the valley, on which, near the head, there was a mill. It seemed a road for the pilgrim to enter upon who would climb to the gates of heaven. Now I crossed a hayfield, and now over the brook on a slight bridge, still gradually ascending all the while with a sort of awe, and filled with indefinite expectations as to what kind of inhabitants and what kind of nature I should come to at last. It now seemed some advantage that the earth was uneven, for one could not imagine a more noble position for a farmhouse than this vale afforded, farther from or nearer to its head, from a glen-like seclusion overlooking the country at a great elevation between these two mountain walls.

It reminded me of the homesteads of the Huguenots, on Staten Island, off the coast of New Jersey. The hills in the interior of this island, though comparatively low, are penetrated in various directions by similar sloping valleys on a humble scale, gradually narrowing and rising to the centre, and at the head of these the Huguenots, who were the first settlers, placed their houses quite within the land, in rural and sheltered places, in leafy recesses where the breeze played with the poplar and the gum-tree, from which, with equal security in calm and storm, they looked out through a widening vista, over miles of forest and stretching salt marsh, to the Huguenot's Tree, an old elm on the shore, at

whose root they had landed, and across the spacious outer bay of New York to Sandy Hook and the Highlands of Neversink, and thence over leagues of the Atlantic, perchance to some faint vessel in the horizon, almost a day's sail on her voyage to that Europe whence they had come. When walking in the interior there, in the midst of rural scenery, where there was as little to remind me of the ocean as amid the New Hampshire hills, I have suddenly, through a gap, a cleft or "clove road," as the Dutch settlers called it, caught sight of a ship under full sail, over a field of corn, twenty or thirty miles at sea. The effect was similar, since I had no means of measuring distances, to seeing a painted ship passed backwards and forwards through a magic lantern.

But to return to the mountain. It seemed as if he must be the most singular and heavenly-minded man whose dwelling stood highest up the valley. The thunder had rumbled at my heels all the way, but the shower passed off in another direction, though if it had not, I half believed that I should get above it. I at length reached the last house but one, where the path to the summit diverged to the right, while the summit itself rose directly in front. But I determined to follow up the valley to its head, and then find my own route up the steep as the shorter and more adventurous way. I had thoughts of returning to this house, which was well kept and so nobly placed, the next day, and perhaps remaining a week there, if I could have entertainment. Its mistress was a frank and hospitable young woman, who stood before me in a dishabille, busily and uncon-

cernedly combing her long black hair while she talked, giving her head the necessary toss with each sweep of the comb, with lively, sparkling eyes, and full of interest in that lower world from which I had come, talking all the while as familiarly as if she had known me for years, and reminding me of a cousin of mine. She at first had taken me for a student from Williamstown, for they went by in parties, she said, either riding or walking, almost every pleasant day, and were a pretty wild set of fellows; but they never went by the way I was going. As I passed the last house, a man called out to know what I had to sell, for, seeing my knapsack, he thought that I might be a peddler who was taking this unusual route over the ridge of the valley into South Adams. He told me that it was still four or five miles to the summit by the path which I had left, though not more than two in a straight line from where I was, but that nobody ever went this way; there was no path, and I should find it as steep as the roof of a house. But I knew that I was more used to woods and mountains than he, and went along through his cow-yard, while he, looking at the sun, shouted after me that I should not get to the top that night. I soon reached the head of the valley, but as I could not see the summit from this point, I ascended a low mountain on the opposite side, and took its bearing with my compass. I at once entered the woods, and began to climb the steep side of the mountain in a diagonal direction, taking the bearing of a tree every dozen rods. The ascent was by no means difficult or unpleasant, and occupied much less time than it would have taken to follow the path. Even coun-

try people, I have observed, magnify the difficulty of traveling in the forest, and especially among mountains. They seem to lack their usual common sense in this. I have climbed several higher mountains without guide or path, and have found, as might be expected, that it takes only more time and patience commonly than to travel the smoothest highway. It is very rare that you meet with obstacles in this world which the humblest man has not faculties to surmount. It is true we may come to a perpendicular precipice, but we need not jump off, nor run our heads against it. A man may jump down his own cellar stairs, or dash his brains out against his chimney, if he is mad. So far as my experience goes, travelers generally exaggerate the difficulties of the way. Like most evil, the difficulty is imaginary; for what's the hurry? If a person lost would conclude that after all he is not lost, he is not beside himself, but standing in his own old shoes on the very spot where he is, and that for the time being he will live there; but the places that have known him, *they* are lost, — how much anxiety and danger would vanish. I am not alone if I stand by myself. Who knows where in space this globe is rolling? Yet we will not give ourselves up for lost, let it go where it will.

I made my way steadily upward in a straight line, through a dense undergrowth of mountain laurel, until the trees began to have a scraggy and infernal look, as if contending with frost goblins, and at length I reached the summit, just as the sun was setting. Several acres here had been cleared, and were covered with rocks and stumps, and there was a rude observatory in the middle

which overlooked the woods. I had one fair view of the country before the sun went down, but I was too thirsty to waste any light in viewing the prospect, and set out directly to find water. First, going down a well-beaten path for half a mile through the low, scrubby wood, till I came to where the water stood in the tracks of the horses which had carried travelers up, I lay down flat, and drank these dry, one after another, a pure, cold, spring-like water, but yet I could not fill my dipper, though I contrived little siphons of grass stems, and ingenious aqueducts on a small scale; it was too slow a process. Then, remembering that I had passed a moist place near the top, on my way up, I returned to find it again, and here, with sharp stones and my hands, in the twilight, I made a well about two feet deep, which was soon filled with pure cold water, and the birds too came and drank at it. So I filled my dipper, and, making my way back to the observatory, collected some dry sticks, and made a fire on some flat stones which had been placed on the floor for that purpose, and so I soon cooked my supper of rice, having already whittled a wooden spoon to eat it with.

I sat up during the evening, reading by the light of the fire the scraps of newspapers in which some party had wrapped their luncheon, — the prices current in New York and Boston, the advertisements, and the singular editorials which some had seen fit to publish, not foreseeing under what critical circumstances they would be read. I read these things at a vast advantage there, and it seemed to me that the advertisements, or what is called the business part of a paper, were greatly the best, the

most useful, natural, and respectable. Almost all the opinions and sentiments expressed were so little considered, so shallow and flimsy, that I thought the very texture of the paper must be weaker in that part and tear the more easily. The advertisements and the prices current were more closely allied to nature, and were respectable in some measure as tide and meteorological tables are; but the reading-matter, which I remembered was most prized down below, unless it was some humble record of science, or an extract from some old classic, struck me as strangely whimsical, and crude, and one-idea'd, like a school-boy's theme, such as youths write and after burn. The opinions were of that kind that are doomed to wear a different aspect to-morrow, like last year's fashions; as if mankind were very green indeed, and would be ashamed of themselves in a few years, when they had outgrown this verdant period. There was, moreover, a singular disposition to wit and humor, but rarely the slightest real success; and the apparent success was a terrible satire on the attempt; the Evil Genius of man laughed the loudest at his best jokes. The advertisements, as I have said, such as were serious, and not of the modern quack kind, suggested pleasing and poetic thoughts; for commerce is really as interesting as nature. The very names of the commodities were poetic, and as suggestive as if they had been inserted in a pleasing poem, — Lumber, Cotton, Sugar, Hides, Guano, Logwood. Some sober, private, and original thought would have been grateful to read there, and as much in harmony with the circumstances as if it had been written on a mountain-top; for it is of a fashion which

never changes, and as respectable as hides and logwood, or any natural product. What an inestimable companion such a scrap of paper would have been, containing some fruit of a mature life! What a relic! What a recipe! It seemed a divine invention, by which not mere shining coin, but shining and current thoughts, could be brought up and left there.

As it was cold, I collected quite a pile of wood and lay down on a board against the side of the building, not having any blanket to cover me, with my head to the fire, that I might look after it, which is not the Indian rule. But as it grew colder towards midnight, I at length encased myself completely in boards, managing even to put a board on top of me, with a large stone on it, to keep it down, and so slept comfortably. I was reminded, it is true, of the Irish children, who inquired what their neighbors did who had no door to put over them in winter nights as they had; but I am convinced that there was nothing very strange in the inquiry. Those who have never tried it can have no idea how far a door, which keeps the single blanket down, may go toward making one comfortable. We are constituted a good deal like chickens, which, taken from the hen, and put in a basket of cotton in the chimney-corner, will often peep till they die, nevertheless; but if you put in a book, or anything heavy, which will press down the cotton, and feel like the hen, they go to sleep directly. My only companions were the mice, which came to pick up the crumbs that had been left in those scraps of paper; still, as everywhere, pensioners on man, and not unwisely improving this elevated tract for their habitation. They nibbled what was

for them; I nibbled what was for me. Once or twice in the night, when I looked up, I saw a white cloud drifting through the windows, and filling the whole upper story.

This observatory was a building of considerable size, erected by the students of Williamstown College, whose buildings might be seen by daylight gleaming far down in the valley. It would be no small advantage if every college were thus located at the base of a mountain, as good at least as one well-endowed professorship. It were as well to be educated in the shadow of a mountain as in more classical shades. Some will remember, no doubt, not only that they went to the college, but that they went to the mountain. Every visit to its summit would, as it were, generalize the particular information gained below, and subject it to more catholic tests.

I was up early and perched upon the top of this tower to see the daybreak, for some time reading the names that had been engraved there, before I could distinguish more distant objects. An "untamable fly" buzzed at my elbow with the same nonchalance as on a molasses hogshead at the end of Long Wharf. Even there I must attend to his stale humdrum. But now I come to the pith of this long digression. As the light increased, I discovered around me an ocean of mist, which by chance reached up exactly to the base of the tower, and shut out every vestige of the earth, while I was left floating on this fragment of the wreck of a world, on my carved plank, in cloudland; a situation which required no aid from the imagination to render it impressive. As the light in the east steadily increased, it revealed to me more clearly the new world into which I had risen in the night, the

new *terra firma* perchance of my future life. There was not a crevice left through which the trivial places we name Massachusetts or Vermont or New York could be seen, while I still inhaled the clear atmosphere of a July morning, — if it were July there. All around beneath me was spread for a hundred miles on every side, as far as the eye could reach, an undulating country of clouds, answering in the varied swell of its surface to the terrestrial world it veiled. It was such a country as we might see in dreams, with all the delights of paradise. There were immense snowy pastures, apparently smooth shaven and firm, and shady vales between the vaporous mountains; and far in the horizon I could see where some luxurious misty timber jutted into the prairie, and trace the windings of a watercourse, some unimagined Amazon or Orinoko, by the misty trees on its brink. As there was wanting the symbol, so there was not the substance of impurity, no spot nor stain. It was a favor for which to be forever silent to be shown this vision. The earth beneath had become such a flitting thing of lights and shadows as the clouds had been before. It was not merely veiled to me, but it had passed away like the phantom of a shadow, *σκιᾶς ὄναρ*, and this new platform was gained. As I had climbed above storm and cloud, so by successive days' journeys I might reach the region of eternal day, beyond the tapering shadow of the earth; ay, —

“Heaven itself shall slide,
And roll away like melting stars that glide
Along their oily threads.”

But when its own sun began to rise on this pure world,

I found myself a dweller in the dazzling halls of Aurora, into which poets have had but a partial glance over the eastern hills, drifting amid the saffron-colored clouds, and playing with the rosy fingers of the Dawn, in the very path of the Sun's chariot, and sprinkled with its dewy dust, enjoying the benignant smile, and near at hand the far-darting glances of the god. The inhabitants of earth behold commonly but the dark and shadowy under side of heaven's pavement; it is only when seen at a favorable angle in the horizon, morning or evening, that some faint streaks of the rich lining of the clouds are revealed. But my muse would fail to convey an impression of the gorgeous tapestry by which I was surrounded, such as men see faintly reflected afar off in the chambers of the east. Here, as on earth, I saw the gracious god

“Flatter the mountain-tops with sovereign eye,

.
Gilding pale streams with heavenly alchemy.”

But never here did “Heaven's sun” stain himself.

But, alas, owing, as I think, to some unworthiness in myself, my private sun did stain himself, and

“Anon permit the basest clouds to ride
With ugly wrack on his celestial face,” —

for before the god had reached the zenith the heavenly pavement rose and embraced my wavering virtue, or rather I sank down again into that “forlorn world,” from which the celestial sun had hid his visage, —

“How may a worm that crawls along the dust,
Clamber the azure mountains, thrown so high,

And fetch from thence thy fair idea just,
That in those sunny courts doth hidden lie,
Clothed with such light as blinds the angel's eye?
How may weak mortal ever hope to file
His unsmooth tongue, and his depopulate style?
Oh, raise thou from his corse thy now entombed exile!"

In the preceding evening I had seen the summits of new and yet higher mountains, the Catskills, by which I might hope to climb to heaven again, and had set my compass for a fair lake in the southwest, which lay in my way, for which I now steered, descending the mountain by my own route, on the side opposite to that by which I had ascended, and soon found myself in the region of cloud and drizzling rain, and the inhabitants affirmed that it had been a cloudy and drizzling day wholly.

But now we must make haste back before the fog disperses to the blithe Merrimack water.

Since that first "Away! away!"
Many a lengthy reach we've rowed,
Still the sparrow on the spray
Hastes to usher in the day
With her simple stanza'd ode.

We passed a canal-boat before sunrise, groping its way to the seaboard, and, though we could not see it on account of the fog, the few dull, thumping, stertorous sounds which we heard impressed us with a sense of weight and irresistible motion. One little rill of commerce already awake on this distant New Hampshire river. The fog, as it required more skill in the steering, enhanced the interest of our early voyage, and made the river seem indefinitely broad. A slight mist, through

which objects are faintly visible, has the effect of expanding even ordinary streams, by a singular mirage, into arms of the sea or inland lakes. In the present instance, it was even fragrant and invigorating, and we enjoyed it as a sort of earlier sunshine, or dewy and embryo light.

Low-anchored cloud,
Newfoundland air,
Fountain-head and source of rivers,
Dew-cloth, dream drapery,
And napkin spread by fays;
Drifting meadow of the air,
Where bloom the daisied banks and violets,
And in whose fenny labyrinth
The bittern booms and heron wades;
Spirit of lakes and seas and rivers,
Bear only perfumes and the scent
Of healing herbs to just men's fields!

The same pleasant and observant historian whom we quoted above says that "In the mountainous parts of the country, the ascent of vapors, and their formation into clouds, is a curious and entertaining object. The vapors are seen rising in small columns like smoke from many chimneys. When risen to a certain height, they spread, meet, condense, and are attracted to the mountains, where they either distill in gentle dews, and replenish the springs, or descend in showers, accompanied with thunder. After short intermissions, the process is repeated many times in the course of a summer day, affording to travelers a lively illustration of that is observed in the Book of Job, 'They are wet with the showers of the mountains.'"

Fogs and clouds which conceal the overshadowing

mountains lend the breadth of the plains to mountain vales. Even a small-featured country acquires some grandeur in stormy weather when clouds are seen drifting between the beholder and the neighboring hills. When, in traveling toward Haverhill through Hampstead in this State, on the height of land between the Merrimack and the Piscataqua or the sea, you commence the descent eastward, the view toward the coast is so distant and unexpected, though the sea is invisible, that you at first suppose the unobstructed atmosphere to be a fog in the lowlands concealing hills of corresponding elevation to that you are upon; but it is the mist of prejudice alone, which the winds will not disperse. The most stupendous scenery ceases to be sublime when it becomes distinct, or in other words limited, and the imagination is no longer encouraged to exaggerate it. The actual height and breadth of a mountain or a waterfall are always ridiculously small; they are the imagined only that content us. Nature is not made after such a fashion as we would have her. We piously exaggerate her wonders, as the scenery around our home.

Such was the heaviness of the dews along this river that we were generally obliged to leave our tent spread over the bows of the boat till the sun had dried it, to avoid mildew. We passed the mouth of Penichook Brook, a wild salmon stream, in the fog, without seeing it. At length the sun's rays struggled through the mist and showed us the pines on shore dripping with dew, and springs trickling from the moist banks, —

“And now the taller sons, whom Titan warms,
Of unshorn mountains blown with easy winds,

Dandle the morning's childhood in their arms,
And, if they chanced to slip the prouder pines,
The under corylets did catch their shines,
To gild their leaves."

We rowed for some hours between glistening banks before the sun had dried the grass and leaves, or the day had established its character. Its serenity at last seemed the more profound and secure for the denseness of the morning's fog. The river became swifter, and the scenery more pleasing than before. The banks were steep and clayey for the most part, and trickling with water, and where a spring oozed out a few feet above the river the boatmen had cut a trough out of a slab with their axes, and placed it so as to receive the water and fill their jugs conveniently. Sometimes this purer and cooler water, bursting out from under a pine or a rock, was collected into a basin close to the edge of and level with the river, a fountain-head of the Merrimack. So near along life's stream are the fountains of innocence and youth making fertile its sandy margin; and the voyageur will do well to replenish his vessels often at these uncontaminated sources. Some youthful spring, perchance, still empties with tinkling music into the oldest river, even when it is falling into the sea, and we imagine that its music is distinguished by the river-gods from the general lapse of the stream, and falls sweeter on their ears in proportion as it is nearer to the ocean. As the evaporations of the river feed thus these unsuspected springs which filter through its banks, so, perchance, our aspirations fall back again in springs on the margin of life's stream to refresh and purify it. The yellow and

tepid river may float his scow, and cheer his eye with its reflections and its ripples, but the boatman quenches his thirst at this small rill alone. It is this purer and cooler element that chiefly sustains his life. The race will long survive that is thus discreet.

Our course this morning lay between the territories of Merrimack, on the west, and Litchfield, once called Brenton's Farm, on the east, which townships were anciently the Indian Naticook. Brenton was a fur-trader among the Indians, and these lands were granted to him in 1656. The latter township contains about five hundred inhabitants, of whom, however, we saw none, and but few of their dwellings. Being on the river, whose banks are always high and generally conceal the few houses, the country appeared much more wild and primitive than to the traveler on the neighboring roads. The river is by far the most attractive highway, and those boatmen who have spent twenty or twenty-five years on it must have had a much fairer, more wild and memorable experience than the dusty and jarring one of the teamster who has driven, during the same time, on the roads which run parallel with the stream. As one ascends the Merrimack he rarely sees a village, but for the most part alternate wood and pasture lands, and sometimes a field of corn or potatoes, of rye or oats or English grass, with a few straggling apple trees, and, at still longer intervals, a farmer's house. The soil, excepting the best of the interval, is commonly as light and sandy as a patriot could desire. Sometimes this forenoon the country appeared in its primitive state, and as if the Indian still inhabited it, and, again, as if many

free, new settlers occupied it, their slight fences straggling down to the water's edge; and the barking of dogs, and even the prattle of children, were heard, and smoke was seen to go up from some hearthstone, and the banks were divided into patches of pasture, mowing, tillage, and woodland. But when the river spread out broader, with an uninhabited islet, or a long, low, sandy shore which ran on single and devious, not answering to its opposite, but far off as if it were seashore or single coast, and the land no longer nursed the river in its bosom, but they conversed as equals, the rustling leaves with rippling leaves, and few fences were seen, but high oak woods on one side, and large herds of cattle, and all tracks seemed to point to one centre behind some statelier grove, — we imagined that the river flowed through an extensive manor, and that the few inhabitants were retainers to a lord, and a feudal state of things prevailed.

When there was a suitable reach, we caught sight of the Goffstown mountain, the Indian Uncannunuc, rising before us on the west side. It was a calm and beautiful day, with only a slight zephyr to ripple the surface of the water, and rustle the woods on shore, and just warmth enough to prove the kindly disposition of Nature to her children. With buoyant spirits and vigorous impulses we tossed our boat rapidly along into the very middle of this forenoon. The fish hawk sailed and screamed overhead. The chipping or striped squirrel, *Sciurus striatus* (*Tamias Lysteri*, Aud.), sat upon the end of some Virginia fence or rider reaching over the stream, twirling a green nut with one paw, as in a lathe, while the other held it fast against its incisors as chisels. Like an independent

russet leaf, with a will of its own, rustling whither it could; now under the fence, now over it, now peeping at the voyageurs through a crack with only its tail visible, now at its lunch deep in the toothsome kernel, and now a rod off playing at hide-and-seek, with the nut stowed away in its chaps, where were half a dozen more besides, extending its cheeks to a ludicrous breadth, — as if it were devising through what safe valve of frisk or somerset to let its superfluous life escape; the stream passing harmlessly off, even while it sits, in constant electric flashes through its tail. And now with a chuckling squeak it dives into the root of a hazel, and we see no more of it. Or the larger red squirrel, or chickaree, sometimes called the Hudson Bay squirrel (*Sciurus Hudsonius*), gave warning of our approach by that peculiar alarum of his, like the winding up of some strong clock, in the top of a pine tree, and dodged behind its stem, or leaped from tree to tree with such caution and adroitness, as if much depended on the fidelity of his scout, running along the white pine boughs sometimes twenty rods by our side, with such speed, and by such unerring routes, as if it were some well-worn familiar path to him; and presently, when we have passed, he returns to his work of cutting off the pine cones, and letting them fall to the ground.

We passed Cromwell's Falls, the first we met with on this river, this forenoon, by means of locks, without using our wheels. These falls are the Nesenkeag of the Indians. Great Nesenkeag Stream comes in on the right just above, and Little Nesenkeag some distance below, both in Litchfield. We read in the Gazetteer, under th

head of Merrimack, that "the first house in this town was erected on the margin of the river [soon after 1665] for a house of traffic with the Indians. For some time one Cromwell carried on a lucrative trade with them, weighing their furs with his foot, till, enraged at his supposed or real deception, they formed the resolution to murder him. This intention being communicated to Cromwell, he buried his wealth and made his escape. Within a few hours after his flight, a party of the Penacook tribe arrived, and, not finding the object of their resentment, burnt his habitation." Upon the top of the high bank here, close to the river, was still to be seen his cellar, now overgrown with trees. It was a convenient spot for such a traffic, at the foot of the first falls above the settlements, and commanding a pleasant view up the river, where he could see the Indians coming down with their furs. The lock-man told us that his shovel and tongs had been plowed up here, and also a stone with his name on it. But we will not vouch for the truth of this story. In the New Hampshire Historical Collections for 1815 it says, "Some time after, pewter was found in the well, and an iron pot and trammel in the sand; the latter are preserved." These were the traces of the white trader. On the opposite bank, where it jutted over the stream cape-wise, we picked up four arrowheads, and a small Indian tool made of stone, as soon as we had climbed it, where plainly there had once stood a wigwam of the Indians with whom Cromwell traded, and who fished and hunted here before he came.

As usual, the gossips have not been silent respecting Cromwell's buried wealth, and it is said that some years

ago a farmer's plow, not far from here, slid over a flat stone which emitted a hollow sound, and, on its being raised, a small hole six inches in diameter was discovered, stoned about, from which a sum of money was taken. The lock-man told us another similar story about a farmer in a neighboring town, who had been a poor man, but who suddenly bought a good farm, and was well to do in the world, and, when he was questioned, did not give a satisfactory account of the matter; how few, alas, could! This caused his hired man to remember that one day, as they were plowing together, the plow struck something, and his employer, going back to look, concluded not to go round again, saying that the sky looked rather lowering, and so put up his team. The like urgency has caused many things to be remembered which never transpired. The truth is, there is money buried everywhere, and you have only to go to work to find it.

Not far from these falls stands an oak tree, on the interval, about a quarter of a mile from the river, on the farm of a Mr. Lund, which was pointed out to us as the spot where French, the leader of the party which went in pursuit of the Indians from Dunstable, was killed. Farwell dodged them in the thick woods near. It did not look as if men had ever had to run for their lives on this now open and peaceful interval.

Here, too, was another extensive desert by the side of the road in Litchfield, visible from the bank of the river. The sand was blown off in some places to the depth of ten or twelve feet, leaving small grotesque hillocks of that height, where there was a clump of bushes firmly rooted. Thirty or forty years ago, as we were told, it was

a sheep-pasture, but the sheep, being worried by the fleas, began to paw the ground, till they broke the sod, and so the sand began to blow, till now it had extended over forty or fifty acres. This evil might easily have been remedied, at first, by spreading birches with their leaves on over the sand, and fastening them down with stakes, to break the wind. The fleas bit the sheep, and the sheep bit the ground, and the sore had spread to this extent. It is astonishing what a great sore a little scratch breedeth. Who knows but Sahara, where caravans and cities are buried, began with the bite of an African flea? This poor globe, how it must itch in many places! Will no god be kind enough to spread a salve of birches over its sores? Here, too, we noticed where the Indians had gathered a heap of stones, perhaps for their council-fire, which, by their weight having prevented the sand under them from blowing away, were left on the summit of a mound. They told us that arrowheads, and also bullets of lead and iron, had been found here. We noticed several other sandy tracts in our voyage; and the course of the Merrimack can be traced from the nearest mountain by its yellow sand-banks, though the river itself is for the most part invisible. Lawsuits, as we hear, have in some cases grown out of these causes. Railroads have been made through certain irritable districts, breaking their sod, and so have set the sand to blowing, till it has converted fertile farms into deserts, and the company has had to pay the damages.

This sand seemed to us the connecting link between land and water. It was a kind of water on which you could walk, and you could see the ripple-marks on its

surface, produced by the winds, precisely like those at the bottom of a brook or lake. We had read that Mussulmans are permitted by the Koran to perform their ablutions in sand when they cannot get water, a necessary indulgence in Arabia, and we now understood the propriety of this provision.

Plum Island, at the mouth of this river, to whose formation, perhaps, these very banks have sent their contribution, is a similar desert of drifting sand, of various colors, blown into graceful curves by the wind. It is a mere sand-bar exposed, stretching nine miles parallel to the coast, and, exclusive of the marsh on the inside, rarely more than half a mile wide. There are but half a dozen houses on it, and it is almost without a tree, or a sod, or any green thing with which a countryman is familiar. The thin vegetation stands half buried in sand, as in drifting snow. The only shrub, the beach plum, which gives the island its name, grows but a few feet high; but this is so abundant that parties of a hundred at once come from the mainland and down the Merrimack, in September, pitch their tents, and gather the plums, which are good to eat raw and to preserve. The graceful and delicate beach pea, too, grows abundantly amid the sand, and several strange moss-like and succulent plants. The island for its whole length is scalloped into low hills, not more than twenty feet high, by the wind, and, excepting a faint trail on the edge of the marsh, is as trackless as Sahara. There are dreary bluffs of sand and valleys plowed by the wind, where you might expect to discover the bones of a caravan. Schooners come from Boston to load with the sand for masons' uses,

and in a few hours the wind obliterates all traces of their work. Yet you have only to dig a foot or two anywhere to come to fresh water; and you are surprised to learn that woodchucks abound here, and foxes are found, though you see not where they can burrow or hide themselves. I have walked down the whole length of its broad beach at low tide, at which time alone you can find a firm ground to walk on, and probably Massachusetts does not furnish a more grand and dreary walk. On the seaside there are only a distant sail and a few coots to break the grand monotony. A solitary stake stuck up, or a sharper sand-hill than usual, is remarkable as a landmark for miles; while for music you hear only the ceaseless sound of the surf, and the dreary peep of the beach-birds.

There were several canal-boats at Cromwell's Falls passing through the locks, for which we waited. In the forward part of one stood a brawny New Hampshire man, leaning on his pole, bareheaded and in shirt and trousers only, a rude Apollo of a man, coming down from "that vast uplandish country" to the main; of nameless age, with flaxen hair and vigorous, weather-bleached countenance, in whose wrinkles the sun still lodged, as little touched by the heats and frosts and withering cares of life as a maple of the mountain; an undressed, unkempt, uncivil man, with whom we parleyed awhile, and parted not without a sincere interest in one another. His humanity was genuine and instinctive, and his rudeness only a manner. He inquired, just as we were passing out of earshot, if we had killed any-

thing, and we shouted after him that we had shot a *buoy*, and could see him for a long while scratching his head in vain to know if he had heard aright.

There is reason in the distinction of civil and uncivil. The manners are sometimes so rough a rind that we doubt whether they cover any core or sap-wood at all. We sometimes meet uncivil men, children of Amazons, who dwell by mountain paths, and are said to be inhospitable to strangers; whose salutation is as rude as the grasp of their brawny hands, and who deal with men as unceremoniously as they are wont to deal with the elements. They need only to extend their clearings, and let in more sunlight, to seek out the southern slopes of the hills, from which they may look down on the civil plain or ocean, and temper their diet duly with the cereal fruits, consuming less wild meat and acorns, to become like the inhabitants of cities. A true politeness does not result from any hasty and artificial polishing, it is true, but grows naturally in characters of the right grain and quality, through a long fronting of men and events, and rubbing on good and bad fortune. Perhaps I can tell a tale to the purpose while the lock is filling, — for our voyage this forenoon furnishes but few incidents of importance.

Early one summer morning I had left the shores of the Connecticut, and for the livelong day traveled up the bank of a river, which came in from the west; now looking down on the stream, foaming and rippling through the forest a mile off, from the hills over which the road led, and now sitting on its rocky brink and

dipping my feet in its rapids, or bathing adventurously in mid-channel. The hills grew more and more frequent, and gradually swelled into mountains as I advanced, hemming in the course of the river, so that at last I could not see where it came from, and was at liberty to imagine the most wonderful meanderings and descents. At noon I slept on the grass in the shade of a maple, where the river had found a broader channel than usual, and was spread out shallow, with frequent sand-bars exposed. In the names of the towns I recognized some which I had long ago read on teamsters' wagons, that had come from far up country; quiet uplandish towns, of mountainous fame. I walked along, musing and enchanted, by rows of sugar maples, through the small and uninquisitive villages, and sometimes was pleased with the sight of a boat drawn up on a sand-bar, where there appeared no inhabitants to use it. It seemed, however, as essential to the river as a fish, and to lend a certain dignity to it. It was like the trout of mountain streams to the fishes of the sea, or like the young of the land crab born far in the interior, who have never yet heard the sound of the ocean's surf. The hills approached nearer and nearer to the stream, until at last they closed behind me, and I found myself just before nightfall in a romantic and retired valley, about half a mile in length, and barely wide enough for the stream at its bottom. I thought that there could be no finer site for a cottage among mountains. You could anywhere run across the stream on the rocks, and its constant murmuring would quiet the passions of mankind forever. Suddenly the road, which seemed aiming for the mountain-side, turned short to

the left, and another valley opened, concealing the former, and of the same character with it. It was the most remarkable and pleasing scenery I had ever seen. I found here a few mild and hospitable inhabitants, who, as the day was not quite spent, and I was anxious to improve the light, directed me four or five miles farther on my way to the dwelling of a man whose name was Rice, who occupied the last and highest of the valleys that lay in my path, and who, they said, was a rather rude and uncivil man. But "what is a foreign country to those who have science? Who is a stranger to those who have the habit of speaking kindly?"

At length, as the sun was setting behind the mountains in a still darker and more solitary vale, I reached the dwelling of this man. Except for the narrowness of the plain, and that the stones were solid granite, it was the counterpart of that retreat to which Belphoebe bore the wounded Timias, —

"In a pleasant glade,
With mountains round about environed,
And mighty woods, which did the valley shade,
And like a stately theatre it made,
Spreading itself into a spacious plain;
And in the midst a little river played
Amongst the puny stones which seemed to plain,
With gentle murmur, that his course they did restrain."

I observed, as I drew near, that he was not so rude as I had anticipated, for he kept many cattle, and dogs to watch them, and I saw where he had made maple sugar on the sides of the mountains, and above all distinguished the voices of children mingling with the mur-

mur of the torrent before the door. As I passed his stable, I met one whom I supposed to be a hired man, attending to his cattle, and I inquired if they entertained travelers at that house. "Sometimes we do," he answered gruffly, and immediately went to the farthest stall from me, and I perceived that it was Rice himself whom I had addressed. But pardoning this incivility to the wildness of the scenery, I bent my steps to the house. There was no sign-post before it, nor any of the usual invitations to the traveler, though I saw by the road that many went and came there, but the owner's name only was fastened to the outside; a sort of implied and sullen invitation, as I thought. I passed from room to room without meeting any one, till I came to what seemed the guests' apartment, which was neat, and even had an air of refinement about it, and I was glad to find a map against the wall which would direct me on my journey on the morrow. At length I heard a step in a distant apartment, which was the first I had entered, and went to see if the landlord had come in; but it proved to be only a child, one of those whose voices I had heard, probably his son, and between him and me stood in the doorway a large watchdog, which growled at me, and looked as if he would presently spring, but the boy did not speak to him; and when I asked for a glass of water, he briefly said, "It runs in the corner." So I took a mug from the counter and went out of doors, and searched round the corner of the house, but could find neither well nor spring, nor any water but the stream which ran all along the front. I came back, therefore, and, setting down the mug, asked the child if the stream was good to drink; whereupon he

seized the mug, and, going to the corner of the room, where a cool spring which issued from the mountain behind trickled through a pipe into the apartment, filled it, and drank, and gave it to me empty again, and, calling to the dog, rushed out of doors. Ere long some of the hired men made their appearance, and drank at the spring, and lazily washed themselves and combed their hair in silence, and some sat down as if weary, and fell asleep in their seats. But all the while I saw no women, though I sometimes heard a bustle in that part of the house from which the spring came.

At length Rice himself came in, for it was now dark, with an ox-whip in his hand, breathing hard, and he too soon settled down into his seat not far from me, as if, now that his day's work was done, he had no farther to travel, but only to digest his supper at his leisure. When I asked him if he could give me a bed, he said there was one ready, in such a tone as implied that I ought to have known it, and the less said about that the better. So far so good. And yet he continued to look at me as if he would fain have me say something further like a traveler. I remarked that it was a wild and rugged country he inhabited, and worth coming many miles to see. "Not so very rough neither," said he, and appealed to his men to bear witness to the breadth and smoothness of his fields, which consisted in all of one small interval, and to the size of his crops; "and if we have some hills," added he, "there's no better pasturage anywhere." I then asked if this place was the one I had heard of, calling it by a name I had seen on the map, or if it was a certain other; and he answered, gruffly, that it was neither the

one nor the other; that he had settled it and cultivated it, and made it what it was, and I could know nothing about it. Observing some guns and other implements of hunting hanging on brackets around the room, and his hounds now sleeping on the floor, I took occasion to change the discourse, and inquired if there was much game in that country, and he answered this question more graciously, having some glimmering of my drift; but when I inquired if there were any bears, he answered impatiently that he was no more in danger of losing his sheep than his neighbors; he had tamed and civilized that region. After a pause, thinking of my journey on the morrow, and the few hours of daylight in that hollow and mountainous country, which would require me to be on my way betimes, I remarked that the day must be shorter by an hour there than on the neighboring plains; at which he gruffly asked what I knew about it, and affirmed that he had as much daylight as his neighbors; he ventured to say, the days were longer there than where I lived, as I should find if I stayed; that in some way, I could not be expected to understand how, the sun came over the mountains half an hour earlier, and stayed half an hour later there than on the neighboring plains. And more of like sort he said. He was, indeed, as rude as a fabled satyr. But I suffered him to pass for what he was, — for why should I quarrel with nature? — and was even pleased at the discovery of such a singular natural phenomenon. I dealt with him as if to me all manners were indifferent, and he had a sweet, wild way with him. I would not question nature, and I would rather have him as he was than as I would have him. For I had

come up here not for sympathy, or kindness, or society, but for novelty and adventure, and to see what nature had produced here. I therefore did not repel his rudeness, but quite innocently welcomed it all, and knew how to appreciate it, as if I were reading in an old drama a part well sustained. He was indeed a coarse and sensual man, and, as I have said, uncivil, but he had his just quarrel with nature and mankind, I have no doubt, only he had no artificial covering to his ill-humors. He was earthy enough, but yet there was good soil in him, and even a long-suffering Saxon probity at bottom. If you could represent the case to him, he would not let the race die out in him, like a red Indian.

At length I told him that he was a fortunate man, and I trusted that he was grateful for so much light; and, rising, said I would take a lamp, and that I would pay him then for my lodging, for I expected to recommence my journey even as early as the sun rose in his country; but he answered in haste, and this time civilly, that I should not fail to find some of his household stirring, however early, for they were no sluggards, and I could take my breakfast with them before I started, if I chose; and as he lighted the lamp I detected a gleam of true hospitality and ancient civility, a beam of pure and even gentle humanity, from his bleared and moist eyes. It was a look more intimate with me, and more explanatory, than any words of his could have been if he had tried to his dying day. It was more significant than any Rice of those parts could even comprehend, and long anticipated this man's culture, — a glance of his pure genius, which did not much enlighten him, but did

impress and rule him for the moment, and faintly constrain his voice and manner. He cheerfully led the way to my apartment, stepping over the limbs of his men, who were asleep on the floor in an intervening chamber, and showed me a clean and comfortable bed. For many pleasant hours after the household was asleep I sat at the open window, for it was a sultry night, and heard the little river

“Amongst the pumy stones, which seemed to plain,
With gentle murmur, that his course they did restrain.”

But I arose as usual by starlight the next morning, before my host, or his men, or even his dogs, were awake; and, having left a ninepence on the counter, was already halfway over the mountain with the sun before they had broken their fast.

Before I had left the country of my host, while the first rays of the sun slanted over the mountains, as I stopped by the wayside to gather some raspberries, a very old man, not far from a hundred, came along with a milking-pail in his hand, and turning aside began to pluck the berries near me: —

“His reverend locks
In comely curls did wave;
And on his aged temples grew
The blossoms of the grave.”

But when I inquired the way, he answered in a low, rough voice, without looking up or seeming to regard my presence, which I imputed to his years; and presently, muttering to himself, he proceeded to collect his cows in a neighboring pasture; and when he had again returned

near to the wayside, he suddenly stopped, while his cows went on before, and, uncovering his head, prayed aloud in the cool morning air, as if he had forgotten this exercise before, for his daily bread, and also that He who letteth his rain fall on the just and on the unjust, and without whom not a sparrow falleth to the ground, would not neglect the stranger (meaning me), and with even more direct and personal applications, though mainly according to the long-established formula common to lowlanders and the inhabitants of mountains. When he had done praying, I made bold to ask him if he had any cheese in his hut which he would sell me, but he answered without looking up, and in the same low and repulsive voice as before, that they did not make any, and went to milking. It is written, "The stranger who turneth away from a house with disappointed hopes, leaveth there his own offenses, and departeth, taking with him all the good actions of the owner."

Being now fairly in the stream of this week's commerce, we began to meet with boats more frequently, and hailed them from time to time with the freedom of sailors. The boatmen appeared to lead an easy and contented life, and we thought that we should prefer their employment ourselves to many professions which are much more sought after. They suggested how few circumstances are necessary to the well-being and serenity of man, how indifferent all employments are, and that any may seem noble and poetic to the eyes of men, if pursued with sufficient buoyancy and freedom. With liberty and pleasant weather, the simplest occupa-

tion, any unquestioned country mode of life which detains us in the open air, is alluring. The man who picks peas steadily for a living is more than respectable, he is even envied by his shop-worn neighbors. We are as happy as the birds when our Good Genius permits us to pursue any outdoor work, without a sense of dissipation. Our penknife glitters in the sun; our voice is echoed by yonder wood; if an oar drops, we are fain to let it drop again.

The canal-boat is of very simple construction, requiring but little ship-timber, and, as we were told, costs about two hundred dollars. They are managed by two men. In ascending the stream they use poles fourteen or fifteen feet long, pointed with iron, walking about one third the length of the boat from the forward end. Going down, they commonly keep in the middle of the stream, using an oar at each end; or if the wind is favorable they raise their broad sail, and have only to steer. They commonly carry down wood or bricks, — fifteen or sixteen cords of wood, and as many thousand bricks, at a time, — and bring back stores for the country, consuming two or three days each way between Concord and Charlestown. They sometimes pile the wood so as to leave a shelter in one part where they may retire from the rain. One can hardly imagine a more healthful employment, or one more favorable to contemplation and the observation of nature. Unlike the mariner, they have the constantly varying panorama of the shore to relieve the monotony of their labor, and it seemed to us that as they thus glided noiselessly from town to town, with all their furniture about them, for their very

homestead is a movable, they could comment on the character of the inhabitants with greater advantage and security to themselves than the traveler in a coach, who would be unable to indulge in such broadsides of wit and humor in so small a vessel for fear of the recoil. They are not subject to great exposure, like the lumberers of Maine, in any weather, but inhale the healthfullest breezes, being slightly incumbered with clothing, frequently with the head and feet bare. When we met them at noon, as they were leisurely descending the stream, their busy commerce did not look like toil, but rather like some ancient Oriental game still played on a large scale, as the game of chess, for instance, handed down to this generation. From morning till night, unless the wind is so fair that his single sail will suffice without other labor than steering, the boatman walks backwards and forwards on the side of his boat, now stooping with his shoulder to the pole, then drawing it back slowly to set it again, meanwhile moving steadily forward through an endless valley and an ever-changing scenery, now distinguishing his course for a mile or two, and now shut in by a sudden turn of the river in a small woodland lake. All the phenomena which surround him are simple and grand, and there is something impressive, even majestic, in the very motion he causes, which will naturally be communicated to his own character, and he feels the slow, irresistible movement under him with pride, as if it were his own energy.

The news spread like wildfire among us youths, when formerly, once in a year or two, one of these boats came up the Concord River, and was seen stealing mysteri-

ously through the meadows and past the village. It came and departed as silently as a cloud, without noise or dust, and was witnessed by few. One summer day this huge traveler might be seen moored at some meadow's wharf, and another summer day it was not there. Where precisely it came from, or who these men were who knew the rocks and soundings better than we who bathed there, we could never tell. We knew some river's bay only, but they took rivers from end to end. They were a sort of fabulous rivermen to us. It was inconceivable by what sort of mediation any mere landsman could hold communication with them. Would they heave to, to gratify his wishes? No, it was favor enough to know faintly of their destination, or the time of their possible return. I have seen them in the summer, when the stream ran low, mowing the weeds in mid-channel, and with hayers' jests cutting broad swaths in three feet of water, that they might make a passage for their scow, while the grass in long windrows was carried down the stream, undried by the rarest hay weather. We admired unweariedly how their vessel would float, like a huge chip, sustaining so many casks of lime, and thousands of bricks, and such heaps of iron ore, with wheelbarrows aboard, and that, when we stepped on it, it did not yield to the pressure of our feet. It gave us confidence in the prevalence of the law of buoyancy, and we imagined to what infinite uses it might be put. The men appeared to lead a kind of life on it, and it was whispered that they slept aboard. Some affirmed that it carried sail, and that such winds blew here as filled the sails of vessels on the ocean; which again others much doubted. They had

been seen to sail across our Fair Haven Bay by lucky fishers who were out, but unfortunately others were not there to see. We might then say that our river was navigable, — why not? In after years I read in print, with no little satisfaction, that it was thought by some that, with a little expense in removing rocks and deepening the channel, “there might be a profitable inland navigation.” *I* then lived somewhere to tell of.

Such is Commerce, which shakes the cocoanut and bread-fruit tree in the remotest isle, and sooner or later dawns on the duskiest and most simple-minded savage. If we may be pardoned the digression, who can help being affected at the thought of the very fine and slight, but positive relation, in which the savage inhabitants of some remote isle stand to the mysterious white mariner, the child of the sun? — as if *we* were to have dealings with an animal higher in the scale of being than ourselves. It is a barely recognized fact to the natives that he exists, and has his home far away somewhere, and is glad to buy their fresh fruits with his superfluous commodities. Under the same catholic sun glances his white ship over Pacific waves into their smooth bays, and the poor savage’s paddle gleams in the air.

Man’s little acts are grand,
Beheld from land to land,
There as they lie in time,
Within their native clime.
Ships with the noontide weigh,
And glide before its ray
To some retired bay,
Their haunt,
Whence, under tropic sun,

Again they run,
Bearing gum Senegal and Tragacant.
For this was ocean meant,
For this the sun was sent,
And moon was lent,
And winds in distant caverns pent.

Since our voyage the railroad on the bank has been extended, and there is now but little boating on the Merrimack. All kinds of produce and stores were formerly conveyed by water, but now nothing is carried up the stream, and almost wood and bricks alone are carried down, and these are also carried on the railroad. The locks are fast wearing out, and will soon be impassable, since the tolls will not pay the expense of repairing them, and so in a few years there will be an end of boating on this river. The boating at present is principally between Merrimack and Lowell, or Hooksett and Manchester. They make two or three trips in a week, according to wind and weather, from Merrimack to Lowell and back, about twenty-five miles each way. The boatman comes singing in to shore late at night, and moors his empty boat, and gets his supper and lodging in some house near at hand, and again early in the morning, by starlight perhaps, he pushes away upstream, and, by a shout, or the fragment of a song, gives notice of his approach to the lock-man, with whom he is to take his breakfast. If he gets up to his wood-pile before noon he proceeds to load his boat, with the help of his single "hand," and is on his way down again before night. When he gets to Lowell he unloads his boat, and gets his receipt for his cargo, and, having heard

the news at the public house at Middlesex or elsewhere, goes back with his empty boat and his receipt in his pocket to the owner, and to get a new load. We were frequently advertised of their approach by some faint sound behind us, and looking round saw them a mile off, creeping stealthily up the side of the stream like alligators. It was pleasant to hail these sailors of the Merri-mack from time to time, and learn the news which circulated with them. We imagined that the sun shining on their bare heads had stamped a liberal and public character on their most private thoughts.

The open and sunny interval still stretched away from the river sometimes by two or more terraces, to the distant hill-country, and when we climbed the bank, we commonly found an irregular copse-wood skirting the river, the primitive having floated down-stream long ago to —, the “King’s navy.” Sometimes we saw the river road a quarter or half a mile distant, and the parti-colored Concord stage, with its cloud of dust, its van of earnest traveling faces, and its rear of dusty trunks, reminding us that the country had its places of rendezvous for restless Yankee men. There dwelt along at considerable distances on this interval a quiet agricultural and pastoral people, with every house its well, as we sometimes proved, and every household, though never so still and remote it appeared in the noontide, its dinner about these times. There they lived on, those New England people, farmer lives, father and grandfather and great-grandfather, on and on without noise, keeping up tradition, and expecting, beside fair weather and abundant harvests, we did not learn what. They

were contented to live, since it was so contrived for them, and where their lines had fallen.

Our uninquiring corpses lie more low
Than our life's curiosity doth go.

Yet these men had no need to travel to be as wise as Solomon in all his glory, so similar are the lives of men in all countries, and fraught with the same homely experiences. One half the world *knows* how the other half lives.

About noon we passed a small village in Merrimack at Thornton's Ferry, and tasted of the waters of Naticook Brook on the same side, where French and his companions, whose grave we saw in Dunstable, were ambuscaded by the Indians. The humble village of Litchfield, with its steepleless meeting-house, stood on the opposite or east bank, near where a dense grove of willows backed by maples skirted the shore. There also we noticed some shagbark trees, which, as they do not grow in Concord, were as strange a sight to us as the palm would be, whose fruit only we have seen. Our course now curved gracefully to the north, leaving a low, flat shore on the Merrimack side, which forms a sort of harbor for canal-boats. We observed some fair elms and particularly large and handsome white maples standing conspicuously on this interval; and the opposite shore, a quarter of a mile below, was covered with young elms and maples six inches high, which had probably sprung from the seeds which had been washed across.

Some carpenters were at work here mending a scow on the green and sloping bank. The strokes of their

mallets echoed from shore to shore, and up and down the river, and their tools gleamed in the sun a quarter of a mile from us, and we realized that boat-building was as ancient and honorable an art as agriculture, and that there might be a naval as well as a pastoral life. The whole history of commerce was made manifest in that scow turned bottom upward on the shore. Thus did men begin to go down upon the sea in ships; *quaeque diu steterant in montibus altis, Fluctibus ignotis insultavêre carinae*; "and keels which had long stood on high mountains careered insultingly (*insultavêre*) over unknown waves." ¹

We thought that it would be well for the traveler to build his boat on the bank of a stream, instead of finding a ferry or a bridge. In the Adventures of Henry the fur-trader, it is pleasant to read that when with his Indians he reached the shore of Ontario, they consumed two days in making two canoes of the bark of the elm tree, in which to transport themselves to Fort Niagara. It is a worthy incident in a journey, a delay as good as much rapid traveling. A good share of our interest in Xenophon's story of his retreat is in the manœuvres to get the army safely over the rivers, whether on rafts of logs or fagots, or sheepskins blown up. And where could they better afford to tarry meanwhile than on the banks of a river?

As we glided past at a distance, these outdoor workmen appeared to have added some dignity to their labor by its very publicness. It was a part of the industry of nature, like the work of hornets and mud wasps.

¹ Ovid, *Met.* I. 133.

The waves slowly beat,
Just to keep the noon sweet,
And no sound is floated o'er,
Save the mallet on shore,
Which echoing on high
Seems a-calking the sky.

The haze, the sun's dust of travel, had a Lethean influence on the land and its inhabitants, and all creatures resigned themselves to float upon the inappreciable tides of nature.

Woof of the sun, ethereal gauze,
Woven of Nature's richest stuffs,
Visible heat, air-water, and dry sea,
Last conquest of the eye;
Toil of the day displayed, sun-dust,
Aerial surf upon the shores of earth,
Ethereal estuary, frith of light,
Breakers of air, billows of heat,
Fine summer spray on inland seas;
Bird of the sun, transparent-winged
Owlet of noon, soft-pinioned,
From heath or stubble rising without song;
Establish thy serenity o'er the fields.

The routine which is in the sunshine and the finest days, as that which has conquered and prevailed, commends itself to us by its very antiquity and apparent solidity and necessity. Our weakness needs it, and our strength uses it. We cannot draw on our boots without bracing ourselves against it. If there were but one erect and solid-standing tree in the woods, all creatures would go to rub against it and make sure of their footing. During the many hours which we spend in this waking sleep, the hand stands still on the face of the clock, and we

grow like corn in the night. Men are as busy as the brooks or bees, and postpone everything to their business; as carpenters discuss politics between the strokes of the hammer while they are shingling a roof.

This noontide was a fit occasion to make some pleasant harbor, and there read the journal of some voyageur like ourselves, not too moral nor inquisitive, and which would not disturb the noon; or else some old classic, the very flower of all reading, which we had postponed to such a season

“Of Syrian peace, immortal leisure.”

But, alas, our chest, like the cabin of a coaster, contained only its well-thumbed “Navigator” for all literature, and we were obliged to draw on our memory for these things.

We naturally remembered Alexander Henry’s Adventures here, as a sort of classic among books of American travel. It contains scenery and rough sketching of men and incidents enough to inspire poets for many years, and to my fancy is as full of sounding names as any page of history, — Lake Winnipeg, Hudson’s Bay, Ottaway, and portages innumerable; Chippeways, Gens de Terres, Les Pilleurs, The Weepers; with reminiscences of Hearne’s journey, and the like; an immense and shaggy but sincere country, summer and winter, adorned with chains of lakes and rivers, covered with snows, with hemlocks, and fir trees. There is a naturalness, an unpretending and cold life in this traveler, as in a Canadian winter, what life was preserved through low temperatures and frontier dangers by furs within a stout heart.

He has truth and moderation worthy of the father of history, which belong only to an intimate experience, and he does not defer too much to literature. The unlearned traveler may quote his single line from the poets with as good right as the scholar. He too may speak of the stars, for he sees them shoot perhaps when the astronomer does not. The good sense of this author is very conspicuous. He is a traveler who does not exaggerate, but writes for the information of his readers, for science, and for history. His story is told with as much good faith and directness as if it were a report to his brother traders, or the Directors of the Hudson's Bay Company, and is fitly dedicated to Sir Joseph Banks. It reads like the argument to a great poem on the primitive state of the country and its inhabitants, and the reader imagines what in each case, with the invocation of the Muse, might be sung, and leaves off with suspended interest, as if the full account were to follow. In what school was this fur-trader educated? He seems to travel the immense snowy country with such purpose only as the reader who accompanies him, and to the latter's imagination, it is, as it were, momentarily created to be the scene of his adventures. What is most interesting and valuable in it, however, is not the materials for the history of Pontiac, or Braddock, or the Northwest, which it furnishes; not the *annals* of the country, but the natural facts, or *perennials*, which are ever without date. When out of history the truth shall be extracted, it will have shed its dates like withered leaves.

The Souhegan, or *Crooked River*, as some translate

it, comes in from the west about a mile and a half above Thornton's Ferry. Babboosuck Brook empties into it near its mouth. There are said to be some of the finest water privileges in the country still unimproved on the former stream, at a short distance from the Merrimack. One spring morning, March 22, in the year 1677, an incident occurred on the banks of the river here, which is interesting to us as a slight memorial of an interview between two ancient tribes of men, one of which is now extinct, while the other, though it is still represented by a miserable remnant, has long since disappeared from its ancient hunting-grounds. A Mr. James Parker, at "Mr. Hinchmanne's farme ner Meremack," wrote thus "to the Honred Governer and Council at Bostown, *Hast, Post Hast*;" —

"Sagamore Wanalancet come this morning to informe me, and then went to Mr. Tyng's to informe him, that his son being on ye other sid of Meremack river over against Souhegan upon the 22 day of this instant, about tene of the clock in the morning, he discovered 15 Indians on this sid the river, which he sposed to be Mohokes by ther spech. He called to them; they answered but he could not understand ther spech; and he having a conow ther in the river, he went to breck his conow that they might not have ani ues of it. In the mean time they shot about thirty guns at him, and he being much frighted fled, and come home forthwith to Nahamcock [Pawtucket Falls or Lowell], wher ther wigowames now stand."

Penacooks and Mohawks! *ubique gentium sunt?*
In the year 1670, a Mohawk warrior scalped a Naam-

keak or else a Wamesit Indian maiden near where Lowell now stands. She, however, recovered. Even as late as 1685, John Hogkins, a Penacook Indian, who describes his grandfather as having lived "at place called Malamake rever, other name chef Natukkog and Panukkog, that one rever great many names," wrote thus to the governor: —

"May 15th, 1685.

"Honor governor my friend, —

"You my friend I desire your worship and your power, because I hope you can do som great matters this one. I am poor and naked and I have no men at my place because I afraid allwayes Mohogs he will kill me every day and night. If your worship when please pray help me you no let Mohogs kill me at my place at Malamake river called Pannukkog and Natukkog, I will submit your worship and your power. And now I want pouder and such alminishon shatt and guns, because I have forth at my hom and I plant theare.

"This all Indian hand, but pray you do consider your humble servant,

JOHN HOGKINS."

Signed also by Simon Detogkom, King Hary, Sam Linis, Mr. Jorge Rodunnonukgus, John Owamosimmin, and nine other Indians, with their marks against their names.

But now, one hundred and fifty-four years having elapsed since the date of this letter, we went unalarmed on our way without "brecking" our "conow," reading

the New England Gazetteer, and seeing no traces of "Mohogs" on the banks.

The Souhegan, though a rapid river, seemed to-day to have borrowed its character from the noon.

Where gleaming fields of haze
Meet the voyageur's gaze,
And above, the heated air
Seems to make a river there,
The pines stand up with pride
By the Souhegan's side,
And the hemlock and the larch
With their triumphal arch
Are waving o'er its march
To the sea.

No wind stirs its waves,
But the spirits of the braves
Hov'ring o'er,
Whose antiquated graves
Its still water laves

On the shore.
With an Indian's stealthy tread
It goes sleeping in its bed,
Without joy or grief,
Or the rustle of a leaf,
Without a ripple or a billow,
Or the sigh of a willow,
From the Lyndeboro' hills
To the Merrimack mills.
With a louder din
Did its current begin,
When melted the snow
On the far mountain's brow.
And the drops came together
In that rainy weather.
Experienced river,
Hast thou flowed forever?
Souhegan soundeth old,

But the half is not told, —
What names hast thou borne,
In the ages far gone,
When the Xanthus and Meander
Commenced to wander,
Ere the black bear haunted
Thy red forest-floor,
Or Nature had planted
The pines by thy shore?

During the heat of the day, we rested on a large island a mile above the mouth of this river, pastured by a herd of cattle, with steep banks and scattered elms and oaks, and a sufficient channel for canal-boats on each side. When we made a fire to boil some rice for our dinner, the flames spreading amid the dry grass, and the smoke curling silently upward and casting grotesque shadows on the ground, seemed phenomena of the noon, and we fancied that we progressed up the stream without effort, and as naturally as the wind and tide went down, not outraging the calm days by unworthy bustle or impatience. The woods on the neighboring shore were alive with pigeons, which were moving south, looking for mast, but now, like ourselves, spending their noon in the shade. We could hear the slight, wiry, winnowing sound of their wings as they changed their roosts from time to time, and their gentle and tremulous cooing. They sojourned with us during the noontide, greater travelers far than we. You may frequently discover a single pair sitting upon the lower branches of the white pine in the depths of the wood, at this hour of the day, so silent and solitary, and with such a hermitlike appearance, as if they had never strayed beyond its skirts, while the acorn

which was gathered in the forests of Maine is still undigested in their crops. We obtained one of these handsome birds, which lingered too long upon its perch, and plucked and broiled it here with some other game, to be carried along for our supper; for, beside the provisions which we carried with us, we depended mainly on the river and forest for our supply. It is true, it did not seem to be putting this bird to its right use to pluck off its feathers, and extract its entrails, and broil its carcass on the coals; but we heroically persevered, nevertheless, waiting for further information. The same regard for Nature which excited our sympathy for her creatures nerved our hands to carry through what we had begun. For we would be honorable to the party we deserted; we would fulfill fate, and so at length, perhaps, detect the secret innocence of these incessant tragedies which Heaven allows.

“Too quick resolves do resolution wrong.
What, part so soon to be divorced so long?
Things to be done are long to be debated;
Heaven is not day’d, Repentance is not dated.”

We are double-edged blades, and every time we whet our virtue the return stroke straps our vice. Where is the skillful swordsman who can give clean wounds, and not rip up his work with the other edge?

Nature herself has not provided the most graceful end for her creatures. What becomes of all these birds that people the air and forest for our solacement? The sparrows seem always *chipper*, never infirm. We do not see their bodies lie about. Yet there is a tragedy at the end of each one of their lives. They must perish miserably;

not one of them is translated. True, "not a sparrow falleth to the ground without our Heavenly Father's knowledge," but they do fall, nevertheless.

The carcasses of some poor squirrels, however, the same that frisked so merrily in the morning, which we had skinned and emboweled for our dinner, we abandoned in disgust, with tardy humanity, as too wretched a resource for any but starving men. It was to perpetuate the practice of a barbarous era. If they had been larger, our crime had been less. Their small red bodies, little bundles of red tissue, mere gobbets of venison, would not have "fattened fire." With a sudden impulse we threw them away, and washed our hands, and boiled some rice for our dinner. "Behold the difference between the one who eateth flesh, and him to whom it belonged! The first hath a momentary enjoyment, whilst the latter is deprived of existence!" "Who would commit so great a crime against a poor animal, who is fed only by the herbs which grow wild in the woods, and whose belly is burnt up with hunger?" We remembered a picture of mankind in the hunter age, chasing hares down the mountains; O me miserable! Yet sheep and oxen are but larger squirrels, whose hides are saved and meat is salted, whose souls perchance are not so large in proportion to their bodies.

There should always be some flowering and maturing of the fruits of nature in the cooking process. Some simple dishes recommend themselves to our imaginations as well as palates. In parched corn, for instance, there is a manifest sympathy between the bursting seed and the more perfect developments of vegetable life.

It is a perfect flower with its petals, like the houstonia or anemone. On my warm hearth these cereal blossoms expanded; here is the bank whereon they grew. Perhaps some such visible blessing would always attend the simple and wholesome repast.

Here was that "pleasant harbor" which we had sighed for, where the weary voyageur could read the journal of some other sailor, whose bark had plowed, perchance, more famous and classic seas. At the tables of the gods, after feasting follow music and song; we will recline now under these island trees, and for our minstrel call on

ANACREON

"Nor has he ceased his charming song, for still that lyre,
Though he is dead, sleeps not in Hades." ¹

I lately met with an old volume from a London bookshop, containing the Greek Minor Poets, and it was a pleasure to read once more only the words Orpheus, Linus, Musæus, — those faint poetic sounds and echoes of a name, dying away on the ears of us modern men; and those hardly more substantial sounds, Mimnermus, Ibycus, Alcæus, Stesichorus, Menander. They lived not in vain. We can converse with these bodiless fames without reserve or personality.

I know of no studies so composing as those of the classical scholar. When we have sat down to them, life seems as still and serene as if it were very far off, and I believe it is not habitually seen from any common platform so truly and unexaggerated as in the light of literature. In serene hours we contemplate the tour of the

¹ Simonides' Epigram on Anacreon.

Greek and Latin authors with more pleasure than the traveler does the fairest scenery of Greece or Italy. Where shall we find a more refined society? That highway down from Homer and Hesiod to Horace and Juvenal is more attractive than the Appian. Reading the classics or conversing with those old Greeks and Latins in their surviving works, is like walking amid the stars and constellations, a high and by way serene to travel. Indeed, the true scholar will be not a little of an astronomer in his habits. Distracting cares will not be allowed to obstruct the field of his vision, for the higher regions of literature, like astronomy, are above storm and darkness.

But passing by these rumors of bards, let us pause for a moment at the Teian poet.

There is something strangely modern about him. He is very easily turned into English. Is it that our lyric poets have resounded but that lyre, which would sound only light subjects, and which Simonides tells us does not sleep in Hades? His odes are like gems of pure ivory. They possess an ethereal and evanescent beauty like summer evenings, *ὁ χρὴ σε νοεῖν νόον ἄνθει*, — *which you must perceive with the flower of the mind*, — and show how slight a beauty could be expressed. You have to consider them, as the stars of lesser magnitude, with the side of the eye, and look aside from them to behold them. They charm us by their serenity and freedom from exaggeration and passion, and by a certain flower-like beauty, which does not propose itself, but must be approached and studied like a natural object. But perhaps their chief merit consists in the lightness and yet security of their tread, —

"The young and tender stalk
Ne'er bends when *they* do walk."

True, our nerves are never strung by them; it is too constantly the sound of the lyre, and never the note of the trumpet; but they are not gross, as has been presumed, but always elevated above the sensual.

These are some of the best that have come down to us.

ON HIS LYRE

I wish to sing the Atridæ,
And Cadmus I wish to sing;
But my lyre sounds
Only love with its chords.
Lately I changed the strings
And all the lyre;
And I began to sing the labors
Of Hercules; but my lyre
Resounded loves.
Farewell, henceforth, for me,
Heroes! for my lyre
Sings only loves.

TO A SWALLOW

Thou indeed, dear swallow,
Yearly going and coming,
In summer weavest thy nest,
And in winter go'st disappearing
Either to Nile or to Memphis.
But Love always weaveth
His nest in my heart. . . .

ON A SILVER CUP

Turning the silver,
Vulcan, make for me,
Not indeed a panoply,
For what are battles to me?

But a hollow cup,
As deep as thou canst.
And make for me in it
Neither stars, nor wagons,
Nor sad Orion;
What are the Pleiades to me?
What the shining Boötes?
Make vines for me,
And clusters of grapes in it,
And of gold Love and Bathyllus
Treading the grapes
With the fair Lyæus.

ON HIMSELF

Thou sing'st the affairs of Thebes,
And he the battles of Troy,
But I of my own defeats.
No horse have wasted me,
Nor foot, nor ships;
But a new and different host,
From eyes smiting me.

TO A DOVE

Lovely dove,
Whence, whence dost thou fly?
Whence, running on air,
Dost thou waft and diffuse
So many sweet ointments?
Who art? What thy errand? —
Anacreon sent me
To a boy, to Bathyllus,
Who lately is ruler and tyrant of all.
Cythere has sold me
For one little song,
And I'm doing this service
For Anacreon.
And now, as you see,
I bear letters from him.

A WEEK

And he says that directly
 He 'll make me free,
 But though he release me,
 His slave will I tarry with him.
 For why should I fly
 Over mountains and fields,
 And perch upon trees,
 Eating some wild thing?
 Now indeed I eat bread,
 Plucking it from the hands
 Of Anacreon himself;
 And he gives me to drink
 The wine which he tastes,
 And drinking, I dance,
 And shadow my master's
 Face with my wings;
 And, going to rest,
 On the lyre itself I sleep.
 That is all; get thee gone.
 Thou hast made me more talkative,
 Man, than a crow.

ON LOVE

Love walking swiftly,
 With hyacinthine staff,
 Bade me to take a run with him;
 And hastening through swift torrents,
 And woody places, and over precipices,
 A water-snake stung me.
 And my heart leaped up to
 My mouth, and I should have fainted;
 But Love, fanning my brows
 With his soft wings, said,
 Surely, thou art not able to love.

ON WOMEN

Nature has given horns
 To bulls, and hoofs to horses,

Swiftness to hares,
To lions yawning teeth,
To fishes swimming,
To birds flight,
To men wisdom.
For woman she had nothing beside;
What then does she give? Beauty, —
Instead of all shields,
Instead of all spears;
And she conquers even iron
And fire, who is beautiful.

ON LOVERS

Horses have the mark
Of fire on their sides,
And some have distinguished
The Parthian men by their crests;
So I, seeing lovers,
Know them at once,
For they have a certain slight
Brand on their hearts.

TO A SWALLOW

What dost thou wish me to do to thee, —
What, thou loquacious swallow?
Dost thou wish me taking thee
Thy light pinions to clip?
Or rather to pluck out
Thy tongue from within,
As that Tereus did?
Why with thy notes in the dawn
Hast thou plundered Bathyllus
From my beautiful dreams?

TO A COLT

Thracian colt, why at me
Looking aslant with thy eyes,
Dost thou cruelly flee,
And think that I know nothing wise?

Know I could well
Put the bridle on thee,
And holding the reins, turn
Round the bounds of the course.
But now thou browses the meads,
And gamboling lightly dost play,
For thou hast no skillful horseman
Mounted upon thy back.

CUPID WOUNDED

Love once among roses
Saw not
A sleeping bee, but was stung;
And being wounded in the finger
Of his hand, cried for pain.
Running as well as flying
To the beautiful Venus,
I am killed, mother, said he,
I am killed, and I die.
A little serpent has stung me,
Winged, which they call
A bee, — the husbandmen.
And she said, If the sting
Of a bee afflicts you,
How, think you, are they afflicted,
Love, whom you smite?

Late in the afternoon, for we had lingered long on the island, we raised our sail for the first time, and for a short hour the southwest wind was our ally; but it did not please Heaven to abet us long. With one sail raised we swept slowly up the eastern side of the stream, steering clear of the rocks, while, from the top of a hill which formed the opposite bank, some lumberers were rolling down timber to be rafted down the stream. We could see their axes and levers gleaming in the sun, and the logs

came down with a dust and a rumbling sound, which was reverberated through the woods beyond us on our side, like the roar of artillery. But Zephyr soon took us out of sight and hearing of this commerce. Having passed Read's Ferry, and another island called McGaw's Island, we reached some rapids called Moore's Falls, and entered on "that section of the river, nine miles in extent, converted, by law, into the Union Canal, comprehending in that space six distinct falls; at each of which, and at several intermediate places, work has been done." After passing Moore's Falls by means of locks, we again had recourse to our oars, and went merrily on our way, driving the small sandpiper from rock to rock before us, and sometimes rowing near enough to a cottage on the bank, though they were few and far between, to see the sunflowers, and the seed-vessels of the poppy, like small goblets filled with the water of Lethe, before the door, but without disturbing the sluggish household behind. Thus we held on, sailing or dipping our way along with the paddle up this broad river, smooth and placid, flowing over concealed rocks, where we could see the pickerel lying low in the transparent water, eager to double some distant cape, to make some great bend as in the life of man, and see what new perspective would open; looking far into a new country, broad and serene, the cottages of settlers seen afar for the first time, yet with the moss of a century on their roofs, and the third or fourth generation in their shadows. Strange was it to consider how the sun and the summer, the buds of spring and the seared leaves of autumn, were related to these cabins along the shore; how all the rays which paint the

landscape radiate from them, and the flight of the crow and the gyrations of the hawk have reference to their roofs. Still the ever rich and fertile shores accompanied us, fringed with vines and alive with small birds and frisking squirrels, the edge of some farmer's field or widow's wood-lot, or wilder, perchance, where the muskrat, the little medicine of the river, drags itself along stealthily over the alder leaves and mussel shells, and man and the memory of man are banished far.

At length the unwearied, never-sinking shore, still holding on without break, with its cool copses and serene pasture-grounds, tempted us to disembark; and we adventurously landed on this remote coast, to survey it, without the knowledge of any human inhabitant probably to this day. But we still remember the gnarled and hospitable oaks which grew even there for our entertainment, and were no strangers to us, the lonely horse in his pasture, and the patient cows, whose path to the river, so judiciously chosen to overcome the difficulties of the way, we followed, and disturbed their ruminations in the shade; and, above all, the cool, free aspect of the wild apple trees, generously proffering their fruit to us, though still green and crude, — the hard, round, glossy fruit, which, if not ripe, still was not poison, but New English too, brought hither, its ancestors, by ours once. These gentler trees imparted a half-civilized and twilight aspect to the otherwise barbarian land. Still farther on we scrambled up the rocky channel of a brook, which had long served nature for a sluice there, leaping like it from rock to rock, through tangled woods, at the bottom of a ravine, which grew darker and darker, and more

and more hoarse the murmurs of the stream, until we reached the ruins of a mill, where now the ivy grew, and the trout glanced through the crumbling flume; and there we imagined what had been the dreams and speculations of some early settler. But the waning day compelled us to embark once more, and redeem this wasted time with long and vigorous sweeps over the rippling stream.

It was still wild and solitary, except that at intervals of a mile or two the roof of a cottage might be seen over the bank. This region, as we read, was once famous for the manufacture of straw bonnets of the Leghorn kind, of which it claims the invention in these parts; and occasionally some industrious damsel tripped down to the water's edge, to put her straw a-soak, as it appeared, and stood awhile to watch the retreating voyageurs, and catch the fragment of a boat-song which we had made, wafted over the water.

Thus, perchance, the Indian hunter,
Many a lagging year ago,
Gliding o'er thy rippling waters,
Lowly hummed a natural song.

Now the sun's behind the willows,
Now he gleams along the waves;
Faintly o'er the wearied billows
Come the spirits of the braves.

Just before sundown we reached some more falls in the town of Bedford, where some stone-masons were employed repairing the locks in a solitary part of the river. They were interested in our adventure, especially one young man of our own age, who inquired at first if

we were bound up to "Skeag;" and when he had heard our story, and examined our outfit, asked us other questions, but temperately still, and always turning to his work again, though as if it were become his duty. It was plain that he would like to go with us, and, as he looked up the river, many a distant cape and wooded shore were reflected in his eye, as well as in his thoughts. When we were ready he left his work, and helped us through the locks with a sort of quiet enthusiasm, telling us that we were at Coos Falls, and we could still distinguish the strokes of his chisel for many sweeps after we had left him.

We wished to camp this night on a large rock in the middle of the stream, just above these falls, but the want of fuel, and the difficulty of fixing our tent firmly, prevented us; so we made our bed on the mainland opposite, on the west bank, in the town of Bedford, in a retired place, as we supposed, there being no house in sight.

WEDNESDAY

Man is man's foe and destiny. — COTTON.

EARLY this morning, as we were rolling up our buffaloes and loading our boat amid the dew, while our embers were still smoking, the masons who worked at the locks, and whom we had seen crossing the river in their boat the evening before while we were examining the rock, came upon us as they were going to their work, and we found that we had pitched our tent directly in the path to their boat. This was the only time that we were observed on our camping-ground. Thus, far from the beaten highways and the dust and din of travel, we beheld the country privately, yet freely, and at our leisure. Other roads do some violence to Nature, and bring the traveler to stare at her, but the river steals into the scenery it traverses without intrusion, silently creating and adorning it, and is as free to come and go as the zephyr.

As we shoved away from this rocky coast, before sunrise, the smaller bittern, the genius of the shore, was moping along its edge, or stood probing the mud for its food, with ever an eye on us, though so demurely at work, or else he ran along over the wet stones like a wrecker in his storm-coat, looking out for wrecks of snails and cockles. Now away he goes, with a limping flight, uncertain where he will alight, until a rod of clear sand amid the alders invites his feet; and now our steady approach compels him to seek a new retreat. It is a bird

of the oldest Thalesian school, and no doubt believes in the priority of water to the other elements; the relic of a twilight antediluvian age which yet inhabits these bright American rivers with us Yankees. There is something venerable in this melancholy and contemplative race of birds, which may have trodden the earth while it was yet in a slimy and imperfect state. Perchance their tracks, too, are still visible on the stones. It still lingers into our glaring summers, bravely supporting its fate without sympathy from man, as if it looked forward to some second advent of which *he* has no assurance. One wonders if, by its patient study by rocks and sandy capes, it has wrested the whole of her secret from Nature yet. What a rich experience it must have gained, standing on one leg and looking out from its dull eye so long on sunshine and rain, moon and stars! What could it tell of stagnant pools and reeds and dank night-fogs! It would be worth the while to look closely into the eye which has been open and seeing at such hours, and in such solitudes its dull, yellowish, greenish eye. Methinks my own soul must be a bright invisible green. I have seen these birds stand by the half dozen together in the shallower water along the shore, with their bills thrust into the mud at the bottom, probing for food, the whole head being concealed, while the neck and body formed an arch above the water.

Cohass Brook, the outlet of Massabesic Pond, — which last is five or six miles distant, and contains fifteen hundred acres, being the largest body of fresh water in Rockingham County, — comes in near here from the east. Rowing between Manchester and Bedford, we

passed, at an early hour, a ferry and some falls, called Goff's Falls, the Indian Cohasset, where there is a small village, and a handsome green islet in the middle of the stream. From Bedford and Merrimack have been boated the bricks of which Lowell is made. About twenty years before, as they told us, one Moore, of Bedford, having clay on his farm, contracted to furnish eight millions of bricks to the founders of that city within two years. He fulfilled his contract in one year, and since then bricks have been the principal export from these towns. The farmers found thus a market for their wood, and when they had brought a load to the kilns, they could cart a load of bricks to the shore, and so make a profitable day's work of it. Thus all parties were benefited. It was worth the while to see the place where Lowell was "dug out." So, likewise, Manchester is being built of bricks made still higher up the river at Hooksett.

There might be seen here on the bank of the Merrimack, near Goff's Falls, in what is now the town of Bedford, famous "for hops and for its fine domestic manufactures," some graves of the aborigines. The land still bears this scar here, and time is slowly crumbling the bones of a race. Yet, without fail, every spring, since they first fished and hunted here, the brown thrasher has heralded the morning from a birch or alder spray, and the undying race of reed-birds still rustles through the withering grass. But these bones rustle not. These mouldering elements are slowly preparing for another metamorphosis, to serve new masters, and what was the Indian's will ere long be the white man's sinew.

We learned that Bedford was not so famous for hops as formerly, since the price is fluctuating, and poles are now scarce. Yet if the traveler goes back a few miles from the river, the hop kilns will still excite his curiosity.

There were few incidents in our voyage this forenoon, though the river was now more rocky and the falls more frequent than before. It was a pleasant change, after rowing incessantly for many hours, to lock ourselves through in some retired place, — for commonly there was no lock-man at hand, — one sitting in the boat, while the other, sometimes with no little labor and heave-yo-ing, opened and shut the gates, waiting patiently to see the locks fill. We did not once use the wheels which we had provided. Taking advantage of the eddy, we were sometimes floated up to the locks almost in the face of the falls; and, by the same cause, any floating timber was carried round in a circle and repeatedly drawn into the rapids before it finally went down the stream. These old gray structures, with their quiet arms stretched over the river in the sun, appeared like natural objects in the scenery, and the kingfisher and sandpiper alighted on them as readily as on stakes or rocks.

We rowed leisurely up the stream for several hours, until the sun had got high in the sky, our thoughts monotonously beating time to our oars. For outward variety there was only the river and the receding shores, a vista continually opening behind and closing before us, as we sat with our backs upstream; and, for inward, such thoughts as the muses grudgingly lent us. We were always passing some low, inviting shore, or some overhanging bank, on which, however, we never landed.

Such near aspects had we
Of our life's scenery.

It might be seen by what tenure men held the earth. The smallest stream is *mediterranean* sea, a smaller ocean creek within the land, where men may steer by their farm bounds and cottage lights. For my own part, but for the geographers, I should hardly have known how large a portion of our globe is water, my life has chiefly passed within so deep a cove. Yet I have sometimes ventured as far as to the mouth of my Snug Harbor. From an old ruined fort on Staten Island, I have loved to watch all day some vessel whose name I had read in the morning through the telegraph glass, when she first came upon the coast, and her hull heaved up and glistened in the sun, from the moment when the pilot and most adventurous news-boats met her, past the Hook, and up the narrow channel of the wide bay, till she was boarded by the health officer, and took her station at quarantine, or held on her unquestioned course to the wharves of New York. It was interesting, too, to watch the less adventurous newsman, who made his assault as the vessel swept through the Narrows, defying plague and quarantine law, and, fastening his little cockboat to her huge side, clambered up and disappeared in the cabin. And then I could imagine what momentous news was being imparted by the captain, which no American ear had ever heard, that Asia, Africa, Europe — were all sunk; for which at length he pays the price, and is seen descending the ship's side with his bundle of newspapers, but not where he first got up, for these arrivers do not stand still to gossip; and he hastes away with steady

sweeps to dispose of his wares to the highest bidder, and we shall ere long read something startling, — “By the latest arrival,” — “by the good ship ——.” On Sunday I beheld, from some interior hill, the long procession of vessels getting to sea, reaching from the city wharves through the Narrows, and past the Hook, quite to the ocean stream, far as the eye could reach, with stately march and silken sails, all counting on lucky voyages, but each time some of the number, no doubt, destined to go to Davy’s locker, and never come on this coast again. And, again, in the evening of a pleasant day, it was my amusement to count the sails in sight. But as the setting sun continually brought more and more to light, still farther in the horizon, the last count always had the advantage, till, by the time the last rays streamed over the sea, I had doubled and trebled my first number; though I could no longer class them all under the several heads of ships, barks, brigs, schooners, and sloops, but most were faint generic *vessels* only. And then the temperate twilight, perchance, revealed the floating home of some sailor whose thoughts were already alienated from this American coast, and directed towards the Europe of our dreams. I have stood upon the same hilltop, when a thunder-shower, rolling down from the Catskills and Highlands, passed over the island, deluging the land; and, when it had suddenly left us in sunshine, have seen it overtake successively, with its huge shadow and dark, descending wall of rain, the vessels in the bay. Their bright sails were suddenly drooping and dark, like the sides of barns, and they seemed to shrink before the storm; while still far beyond them on the sea, through

this dark veil, gleamed the sunny sails of those vessels which the storm had not yet reached. And at midnight, when all around and overhead was darkness, I have seen a field of trembling, silvery light far out on the sea, the reflection of the moonlight from the ocean, as if beyond the precincts of our night, where the moon traversed a cloudless heaven, — and sometimes a dark speck in its midst, where some fortunate vessel was pursuing its happy voyage by night.

But to us river sailors the sun never rose out of ocean waves, but from some green coppice, and went down behind some dark mountain line. We, too, were but dwellers on the shore, like the bittern of the morning; and our pursuit, the wrecks of snails and cockles. Nevertheless, we were contented to know the better one fair particular shore.

My life is like a stroll upon the beach,
As near the ocean's edge as I can go;
My tardy steps its waves sometimes o'erreach,
Sometimes I stay to let them overflow.

My sole employment 't is, and scrupulous care,
To place my gains beyond the reach of tides,
Each smoother pebble, and each shell more rare,
Which ocean kindly to my hand confides.

I have but few companions on the shore,
They scorn the strand who sail upon the sea,
Yet oft I think the ocean they've sailed o'er
Is deeper known upon the strand to me.

The middle sea contains no crimson dulce,
Its deeper waves cast up no pearls to view,
Along the shore my hand is on its pulse,
And I converse with many a shipwrecked crew.

The small houses which were scattered along the river at intervals of a mile or more were commonly out of sight to us, but sometimes, when we rowed near the shore, we heard the peevish note of a hen, or some slight domestic sound, which betrayed them. The lock-men's houses were particularly well placed, retired, and high, always at falls or rapids, and commanding the pleasantest reaches of the river, — for it is generally wider and more lake-like just above a fall, — and there they wait for boats. These humble dwellings, homely and sincere, in which a hearth was still the essential part, were more pleasing to our eyes than palaces or castles would have been. In the noon of these days, as we have said, we occasionally climbed the banks and approached these houses, to get a glass of water and make acquaintance with their inhabitants. High in the leafy bank, surrounded commonly by a small patch of corn and beans, squashes and melons, with sometimes a graceful hop-yard on one side, and some running vine over the windows, they appeared like beehives set to gather honey for a summer. I have not read of any Arcadian life which surpasses the actual luxury and serenity of these New England dwellings. For the outward gilding, at least, the age is golden enough. As you approach the sunny doorway, awakening the echoes by your steps, still no sound from these barracks of repose, and you fear that the gentlest knock may seem rude to the Oriental dreamers. The door is opened, perchance, by some Yankee-Hindoo woman, whose small-voiced but sincere hospitality, out of the bottomless depths of a quiet nature, has traveled quite round to the opposite

side, and fears only to obtrude its kindness. You step over the white-scoured floor to the bright "dresser" lightly, as if afraid to disturb the devotions of the household, — for Oriental dynasties appear to have passed away since the dinner-table was last spread here, — and thence to the frequented curb, where you see your long-forgotten, unshaven face at the bottom, in juxtaposition with new-made butter and the trout in the well. "Perhaps you would like some molasses and ginger," suggests the faint noon voice. Sometimes there sits the brother who follows the sea, their representative man; who knows only how far it is to the nearest port, no more distances, all the rest is sea and distant capes, — patting the dog, or dandling the kitten in arms that were stretched by the cable and the oar, pulling against Boreas or the trade-winds. He looks up at the stranger, half pleased, half astonished, with a mariner's eye, as if he were a dolphin within cast. If men will believe it, *sua si bona norint*, there are no more quiet Tempes, nor more poetic and Arcadian lives, than may be lived in these New England dwellings. We thought that the employment of their inhabitants by day would be to tend the flowers and herds, and at night, like the shepherds of old, to cluster and give names to the stars from the river banks.

We passed a large and densely wooded island this forenoon, between Short's and Griffith's Falls, the fairest which we had met with, with a handsome grove of elms at its head. If it had been evening, we should have been glad to camp there. Not long after, one or two more were passed. The boatmen told us that the current had

recently made important changes here. An island always pleases my imagination, even the smallest, as a small continent and integral portion of the globe. I have a fancy for building my hut on one. Even a bare, grassy isle, which I can see entirely over at a glance, has some undefined and mysterious charm for me. There is commonly such a one at the junction of two rivers, whose currents bring down and deposit their respective sands in the eddy at their confluence, as it were the womb of a continent. By what a delicate and far-stretched contribution every island is made! What an enterprise of Nature thus to lay the foundations of and to build up the future continent, of golden and silver sands and the ruins of forests, with ant-like industry. Pindar gives the following account of the origin of Thera, whence, in after times, Libyan Cyrene was settled by Battus. Triton, in the form of Eurypylus, presents a clod to Euphemus, one of the Argonauts, as they are about to return home.

“He knew of our haste,
And immediately seizing a clod
With his right hand, strove to give it
As a chance stranger’s gift.
Nor did the hero disregard him, but leaping on the shore,
Stretching hand to hand,
Received the mystic clod.
But I hear it sinking from the deck,
Go with the sea brine
At evening, accompanying the watery sea.
Often indeed I urged the careless
Menials to guard it, but their minds forgot.
And now in this island the imperishable seed of spacious Libya
Is spilled before its hour.”

It is a beautiful fable, also related by Pindar, how Helius, or the Sun, looked down into the sea one day, — when perchance his rays were first reflected from some increasing, glittering sand-bar, — and saw the fair and fruitful island of Rhodes

“springing up from the bottom,
Capable of feeding many men, and suitable for flocks;”

and at the nod of Zeus, —

“The island sprang from the watery
Sea; and the genial Father of penetrating beams,
Ruler of fire-breathing horses, has it.”

The shifting islands! who would not be willing that his house should be undermined by such a foe! The inhabitant of an island can tell what currents formed the land which he cultivates; and his earth is still being created or destroyed. There before his door, perchance, still empties the stream which brought down the material of his farm ages before, and is still bringing it down or washing it away, — the graceful, gentle robber!

Not long after this we saw the Piscataquoag, or Sparkling Water, emptying in on our left, and heard the Falls of Amoskeag above. Large quantities of lumber, as we read in the Gazetteer, were still annually floated down the Piscataquoag to the Merrimack, and there are many fine mill privileges on it. Just above the mouth of this river we passed the artificial falls where the canals of the Manchester Manufacturing Company discharge themselves into the Merrimack. They are striking enough to have a name, and, with the scenery of a Bash-

pish, would be visited from far and near. The water falls thirty or forty feet over seven or eight steep and narrow terraces of stone, probably to break its force, and is converted into one mass of foam. This canal water did not seem to be the worse for the wear, but foamed and fumed as purely, and boomed as savagely and impressively, as a mountain torrent, and, though it came from under a factory, we saw a rainbow here. These are now the Amoskeag Falls, removed a mile down-stream. But we did not tarry to examine them minutely, making haste to get past the village here collected, and out of hearing of the hammer which was laying the foundation of another Lowell on the banks. At the time of our voyage Manchester was a village of about two thousand inhabitants, where we landed for a moment to get some cool water, and where an inhabitant told us that he was accustomed to go across the river into Goffstown for his water. But now, as I have been told, and indeed have witnessed, it contains fourteen thousand inhabitants. From a hill on the road between Goffstown and Hooksett, four miles distant, I have seen a thunder-shower pass over, and the sun break out and shine on a city there, where I had landed nine years before in the fields; and there was waving the flag of its Museum, where "the only perfect skeleton of a Greenland or river whale in the United States" was to be seen, and I also read in its directory of a "Manchester Athenæum and Gallery of the Fine Arts."

According to the Gazetteer, the descent of Amoskeag Falls, which are the most considerable in the Merrimack, is fifty-four feet in half a mile. We locked our-

selves through here with much ado, surmounting the successive watery steps of this river's staircase in the midst of a crowd of villagers, jumping into the canal to their amusement, to save our boat from upsetting, and consuming much river water in our service. Amoskeag, or Namaskeak, is said to mean "great fishing-place." It was hereabouts that the Sachem Wannalancet resided. Tradition says that his tribe, when at war with the Mohawks, concealed their provisions in the cavities of the rocks in the upper part of these falls. The Indians, who hid their provisions in these holes, and affirmed "that God had cut them out for that purpose," understood their origin and use better than the Royal Society, who in their Transactions, in the last century, speaking of these very holes, declare that "they seem plainly to be artificial." Similar "pot-holes" may be seen at the Stone Flume on this river, on the Ottaway, at Bellows Falls on the Connecticut, and in the limestone rock at Shelburne Falls on Deerfield River in Massachusetts, and more or less generally about all falls. Perhaps the most remarkable curiosity of this kind in New England is the well-known Basin on the Pemigewasset, one of the headwaters of this river, twenty by thirty feet in extent and proportionably deep, with a smooth and rounded brim, and filled with a cold, pellucid, and greenish water. At Amoskeag the river is divided into many separate torrents and trickling rills by the rocks, and its volume is so much reduced by the drain of the canals that it does not fill its bed. There are many pot-holes here on a rocky island which the river washes over in high freshets. As at Shelburne Falls, where I first observed them, they are

from one foot to four or five in diameter, and as many in depth, perfectly round and regular, with smooth and gracefully curved brims, like goblets. Their origin is apparent to the most careless observer. A stone which the current has washed down, meeting with obstacles, revolves as on a pivot where it lies, gradually sinking in the course of centuries deeper and deeper into the rock, and in new freshets receiving the aid of fresh stones, which are drawn into this trap and doomed to revolve there for an indefinite period, doing Sisypheus-like penance for stony sins, until they either wear out or wear through the bottom of their prison, or else are released by some revolution of nature. There lie the stones of various sizes, from a pebble to a foot or two in diameter, some of which have rested from their labor only since the spring, and some higher up which have lain still and dry for ages, — we noticed some here at least sixteen feet above the present level of the water, — while others are still revolving, and enjoy no respite at any season. In one instance, at Shelburne Falls, they have worn quite through the rock, so that a portion of the river leaks through in anticipation of the fall. Some of these pot-holes at Amoskeag, in a very hard brown-stone, had an oblong, cylindrical stone of the same material loosely fitting them. One, as much as fifteen feet deep and seven or eight in diameter, which was worn quite through to the water, had a huge rock of the same material, smooth but of irregular form, lodged in it. Everywhere there were the rudiments or the wrecks of a dimple in the rock; the rocky shells of whirlpools. As if by force of example and sympathy after so many lessons,

the rocks, the hardest material, had been endeavoring to whirl or flow into the forms of the most fluid. The finest workers in stone are not copper or steel tools, but the gentle touches of air and water working at their leisure with a liberal allowance of time.

Not only have some of these basins been forming for countless ages, but others exist which must have been completed in a former geological period. In deepening the Pawtucket Canal, in 1822, the workmen came to ledges with pot-holes in them, where probably was once the bed of the river, and there are some, we are told, in the town of Canaan in this State, with the stones still in them, on the height of land between the Merrimack and Connecticut, and nearly a thousand feet above these rivers, proving that the mountains and the rivers have changed places. There lie the stones which completed their revolutions perhaps before thoughts began to revolve in the brain of man. The periods of Hindoo and Chinese history, though they reach back to the time when the race of mortals is confounded with the race of gods, are as nothing compared with the periods which these stones have inscribed. That which commenced a rock when time was young shall conclude a pebble in the unequal contest. With such expense of time and natural forces are our very paving-stones produced. They teach us lessons, these dumb workers; verily there are "sermons in stones, and books in the running brooks." In these very holes the Indians hid their provisions; but now there is no bread, but only its old neighbor stones at the bottom. Who knows how many races they have served thus? By as simple a law, some accidental bylaw,

perchance, our system itself was made ready for its inhabitants.

These, and such as these, must be our antiquities, for lack of human vestiges. The monuments of heroes and the temples of the gods which may once have stood on the banks of this river are now, at any rate, returned to dust and primitive soil. The murmur of unchronicled nations has died away along these shores, and once more Lowell and Manchester are on the trail of the Indian.

The fact that Romans once inhabited her reflects no little dignity on Nature herself; that from some particular hill the Roman once looked out on the sea. She need not be ashamed of the vestiges of her children. How gladly the antiquary informs us that their vessels penetrated into this frith, or up that river of some remote isle! Their military monuments still remain on the hills and under the sod of the valleys. The oft-repeated Roman story is written in still legible characters in every quarter of the Old World, and but to-day, perchance, a new coin is dug up whose inscription repeats and confirms their fame. Some "Judæa Capta," with a woman mourning under a palm tree, with silent argument and demonstration confirms the pages of history.

"Rome living was the world's sole ornament;
And dead is now the world's sole monument.

.

With her own weight down pressèd now she lies,
And by her heaps her hugeness testifies."

If one doubts whether Grecian valor and patriotism are not a fiction of the poets, he may go to Athens and see still upon the walls of the temple of Minerva the cir-

cular marks made by the shields taken from the enemy in the Persian war, which were suspended there. We have not far to seek for living and unquestionable evidence. The very dust takes shape and confirms some story which we had read. As Fuller said, commenting on the zeal of Camden, "A broken urn is a whole evidence; or an old gate still surviving out of which the city is run out." When Solon endeavored to prove that Salamis had formerly belonged to the Athenians, and not to the Megareans, he caused the tombs to be opened, and showed that the inhabitants of Salamis turned the faces of their dead to the same side with the Athenians, but the Megareans to the opposite side. There they were to be interrogated.

Some minds are as little logical or argumentative as nature; they can offer no reason or "guess," but they exhibit the solemn and incontrovertible fact. If a historical question arises, they cause the tombs to be opened. Their silent and practical logic convinces the reason and the understanding at the same time. Of such sort is always the only pertinent question and the only satisfactory reply.

Our own country furnishes antiquities as ancient and durable, and as useful, as any; rocks at least as well covered with lichens, and a soil which, if it is virgin, is but virgin mould, the very dust of nature. What if we cannot read Rome or Greece, Etruria or Carthage, or Egypt or Babylon, on these; are our cliffs bare? The lichen on the rocks is a rude and simple shield which beginning and imperfect Nature suspended there. Still hangs her wrinkled trophy. And here, too, the poet's

eye may still detect the brazen nails which fastened Time's inscriptions, and if he has the gift, decipher them by this clue. The walls that fence our fields, as well as modern Rome, and not less the Parthenon itself, are all built of *ruins*. Here may be heard the din of rivers, and ancient winds which have long since lost their names sough through our woods, — the first faint sounds of spring, older than the summer of Athenian glory, the titmouse lisp in the wood, the jay's scream, and bluebird's warble, and the hum of

“bees that fly

About the laughing blossoms of sallowy.”

Here is the gray dawn for antiquity, and our to-morrow's future should be at least paulo-post to theirs which we have put behind us. There are the red maple and birchen leaves, old runes which are not yet deciphered; catkins, pine cones, vines, oak leaves, and acorns; the very things themselves, and not their forms in stone, — so much the more ancient and venerable. And even to the current summer there has come down tradition of a hoary-headed master of all art, who once filled every field and grove with statues and godlike architecture, of every design which Greece has lately copied; whose ruins are now mingled with the dust, and not one block remains upon another. The century sun and unwearied rain have wasted them, till not one fragment from that quarry now exists; and poets perchance will feign that gods sent down the material from heaven.

What though the traveler tell us of the ruins of Egypt, are we so sick or idle that we must sacrifice our America and to-day to some man's ill-remembered and indolent

story? Carnac and Luxor are but names, or if their skeletons remain, still more desert sand and at length a wave of the Mediterranean Sea are needed to wash away the filth that attaches to their grandeur. Carnac! Carnac! here is Carnac for me. I behold the columns of a larger and purer temple.

This is my Carnac, whose unmeasured dome
Shelters the measuring art and measurer's home.
Behold these flowers, let us be up with time,
Not dreaming of three thousand years ago,
Erect ourselves and let those columns lie,
Not stoop to raise a foil against the sky.
Where is the spirit of that time but in
This present day, perchance the present line?
Three thousand years ago are not ago,
They are still lingering in this summer morn,
And Memnon's Mother sprightly greets us now,
Wearing her youthful radiance on her brow.
If Carnac's columns still stand on the plain,
To enjoy our opportunities they remain.

In these parts dwelt the famous Sachem Pasacon-away, who was seen by Gookin "at Pawtucket, when he was about one hundred and twenty years old." He was reputed a wise man and a powwow, and restrained his people from going to war with the English. They believed "that he could make water burn, rocks move, and trees dance, and metamorphose himself into a flaming man; that in winter he could raise a green leaf out of the ashes of a dry one, and produce a living snake from the skin of a dead one, and many similar miracles." In 1660, according to Gookin, at a great feast and dance, he made his farewell speech to his people, in which he said that as he was not likely to see them met together

again, he would leave them this word of advice, to take heed how they quarreled with their English neighbors, for though they might do them much mischief at first, it would prove the means of their own destruction. He himself, he said, had been as much an enemy to the English at their first coming as any, and had used all his arts to destroy them, or at least to prevent their settlement, but could by no means effect it. Gookin thought that he "possibly might have such a kind of spirit upon him as was upon Balaam, who, in Numbers xxiii. 23, said, 'Surely, there is no enchantment against Jacob, neither is there any divination against Israel.'" His son Wannalancet carefully followed his advice, and when Philip's war broke out, he withdrew his followers to Penacook, now Concord in New Hampshire, from the scene of the war. On his return afterwards, he visited the minister of Chelmsford, and, as is stated in the history of that town, "wished to know whether Chelmsford had suffered much during the war; and being informed that it had not, and that God should be thanked for it, Wannalancet replied, 'Me next.'"

Manchester was the residence of John Stark, a hero of two wars, and survivor of a third, and at his death the last but one of the American generals of the Revolution. He was born in the adjoining town of Londonderry, then Nutfield, in 1728. As early as 1752, he was taken prisoner by the Indians while hunting in the wilderness near Baker's River; he performed notable service as a captain of rangers in the French war; commanded a regiment of the New Hampshire militia at the battle of Bunker Hill; and fought and won the battle of Benning-

ton in 1777. He was past service in the last war, and died here in 1822, at the age of ninety-four. His monument stands upon the second bank of the river, about a mile and a half above the falls, and commands a prospect several miles up and down the Merrimack. It suggested how much more impressive in the landscape is the tomb of a hero than the dwellings of the inglorious living. Who is most dead,—a hero by whose monument you stand, or his descendants of whom you have never heard?

The graves of Pasaconaway and Wannalancet are marked by no monument on the bank of their native river.

Every town which we passed, if we may believe the *Gazetteer*, had been the residence of some great man. But though we knocked at many doors, and even made particular inquiries, we could not find that there were any now living. Under the head of Litchfield we read:—

“The Hon. Wyseman Clagett closed his life in this town.” According to another, “He was a classical scholar, a good lawyer, a wit, and a poet.” We saw his old gray house just below Great Nesenkeag Brook. — Under the head of Merrimack: “Hon. Mathew Thornton, one of the signers of the Declaration of American Independence, resided many years in this town.” His house too we saw from the river. — “Dr. Jonathan Gove, a man distinguished for his urbanity, his talents and professional skill, resided in this town [Goffstown]. He was one of the oldest practitioners of medicine in the county. He was many years an active member of the

legislature.” — “Hon. Robert Means, who died January 24, 1823, at the age of 80, was for a long period a resident in Amherst. He was a native of Ireland. In 1764 he came to this country, where, by his industry and application to business, he acquired a large property, and great respect.” — “William Stinson [one of the first settlers of Dunbarton], born in Ireland, came to Londonderry with his father. He was much respected and was a useful man. James Rogers was from Ireland, and father to Major Robert Rogers. He was shot in the woods, being mistaken for a bear.” — “Rev. Matthew Clark, second minister of Londonderry, was a native of Ireland, who had in early life been an officer in the army, and distinguished himself in the defense of the city of Londonderry, when besieged by the army of King James II., A. D. 1688–89. He afterwards relinquished a military life for the clerical profession. He possessed a strong mind, marked by a considerable degree of eccentricity. He died January 25, 1735, and was borne to the grave, at his particular request, by his former companions in arms, of whom there were a considerable number among the early settlers of this town; several of them had been made free from taxes throughout the British dominions by King William, for their bravery in that memorable siege.” — Colonel George Reid and Captain David M’Clary, also citizens of Londonderry, were “distinguished and brave” officers. — “Major Andrew M’Clary, a native of this town [Epsom], fell at the battle of Breed’s Hill.” Many of these heroes, like the illustrious Roman, were plowing when the news of the massacre at Lexington arrived, and straightway left their plows in

the furrow, and repaired to the scene of action. Some miles from where we now were, there once stood a guide-post on which were the words, "3 miles to Squire Mac-Gaw's."

But, generally speaking, the land is now, at any rate, very barren of men, and we doubt if there are as many hundreds as we read of. It may be that we stood too near.

Uncannunuc Mountain in Goffstown was visible from Amoskeag, five or six miles westward. It is the north-easternmost in the horizon which we see from our native town, but seen from there is too ethereally blue to be the same which the like of us have ever climbed. Its name is said to mean "The Two Breasts," there being two eminences some distance apart. The highest, which is about fourteen hundred feet above the sea, probably affords a more extensive view of the Merrimack valley and the adjacent country than any other hill, though it is somewhat obstructed by woods. Only a few short reaches of the river are visible, but you can trace its course far down-stream by the sandy tracts on its banks.

A little south of Uncannunuc, about sixty years ago, as the story goes, an old woman who went out to gather pennyroyal tripped her foot in the bail of a small brass kettle in the dead grass and bushes. Some say that flints and charcoal and some traces of a camp were also found. This kettle, holding about four quarts, is still preserved and used to dye thread in. It is supposed to have belonged to some old French or Indian hunter, who was killed in one of his hunting or scouting excursions, and so never returned to look after his kettle.

But we were most interested to hear of the pennyroyal; it is soothing to be reminded that wild nature produces anything ready for the use of man. Men know that *something* is good. One says that it is yellow dock, another that it is bittersweet, another that it is slippery-elm bark, burdock, catnip, calamint, elecampane, thoroughwort, or pennyroyal. A man may esteem himself happy when that which is his food is also his medicine. There is no kind of herb, but somebody or other says that it is good. I am very glad to hear it. It reminds me of the first chapter of Genesis. But how should they know that it is good? That is the mystery to me. I am always agreeably disappointed; it is incredible that they should have found it out. Since all things are good, men fail at last to distinguish which is the bane and which the antidote. There are sure to be two prescriptions diametrically opposite. Stuff a cold and starve a cold are but two ways. They are the two practices, both always in full blast. Yet you must take advice of the one school as if there was no other. In respect to religion and the healing art, all nations are still in a state of barbarism. In the most civilized countries the priest is still but a Powwow, and the physician a Great Medicine. Consider the deference which is everywhere paid to a doctor's opinion. Nothing more strikingly betrays the credulity of mankind than medicine. Quackery is a thing universal, and universally successful. In this case it becomes literally true that no imposition is too great for the credulity of men. Priests and physicians should never look one another in the face. They have no common ground, nor is there any to mediate between them. When the one

comes, the other goes. They could not come together without laughter, or a significant silence, for the one's profession is a satire on the other's, and either's success would be the other's failure. It is wonderful that the physician should ever die, and that the priest should ever live. Why is it that the priest is never called to consult with the physician? Is it because men believe practically that matter is independent of spirit? But what is quackery? It is commonly an attempt to cure the diseases of a man by addressing his body alone. There is need of a physician who shall minister to both soul and body at once, that is, to man. Now he falls between two stools.

After passing through the locks, we had poled ourselves through the canal here, about half a mile in length, to the boatable part of the river. Above Amoskeag the river spreads out into a lake reaching a mile or two without a bend. There were many canal-boats here bound up to Hooksett, about eight miles, and as they were going up empty, with a fair wind, one boatman offered to take us in tow if we would wait. But when we came alongside, we found that they meant to take us on board, since otherwise we should clog their motions too much; but as our boat was too heavy to be lifted aboard, we pursued our way up the stream, as before, while the boatmen were at their dinner, and came to anchor at length under some alders on the opposite shore, where we could take our lunch. Though far on one side, every sound was wafted over to us from the opposite bank, and from the harbor of the canal, and we could see everything that passed. By and by came several canal-boats, at intervals

of a quarter of a mile, standing up to Hooksett with a light breeze, and one by one disappeared round a point above. With their broad sails set, they moved slowly up the stream in the sluggish and fitful breeze, like one-winged antediluvian birds, and as if impelled by some mysterious counter-current. It was a grand motion, so slow and stately, this "standing out," as the phrase is, expressing the gradual and steady progress of a vessel, as if it were by mere rectitude and disposition, without shuffling. Their sails, which stood so still, were like chips cast into the current of the air, to show which way it set. At length the boat which we had spoken came along, keeping the middle of the stream, and when within speaking distance, the steersman called out ironically to say that if we could come alongside now, he would take us in tow; but not heeding his taunt, we still loitered in the shade till we had finished our lunch, and when the last boat had disappeared round the point with flapping sail, for the breeze had now sunk to a zephyr, with our own sails set, and plying our oars, we shot rapidly up the stream in pursuit, and as we glided close alongside, while they were vainly invoking Æolus to their aid, we returned their compliment by proposing, if they would throw us a rope, to "take them in tow," to which these Merrimack sailors had no suitable answer ready. Thus we gradually overtook and passed each boat in succession until we had the river to ourselves again.

Our course this afternoon was between Manchester and Goffstown.

While we float here, far from that tributary stream

on whose banks our Friends and kindred dwell, our thoughts, like the stars, come out of their horizon still; for there circulates a finer blood than Lavoisier has discovered the laws of, — the blood, not of kindred merely, but of kindness, whose pulse still beats at any distance and forever.

True kindness is a pure divine affinity,
Not founded upon human consanguinity.
It is a spirit, not a blood relation,
Superior to family and station.

After years of vain familiarity, some distant gesture or unconscious behavior, which we remember, speaks to us with more emphasis than the wisest or kindest words. We are sometimes made aware of a kindness long passed, and realize that there have been times when our Friends' thoughts of us were of so pure and lofty a character that they passed over us like the winds of heaven unnoticed; when they treated us not as what we were, but as what we aspired to be. There has just reached us, it may be, the nobleness of some such silent behavior, not to be forgotten, not to be remembered, and we shudder to think how it fell on us cold, though in some true but tardy hour we endeavor to wipe off these scores.

In my experience, persons, when they are made the subject of conversation, though with a Friend, are commonly the most prosaic and trivial of facts. The universe seems bankrupt as soon as we begin to discuss the character of individuals. Our discourse all runs to slander, and our limits grow narrower as we advance. How is it that we are impelled to treat our old Friends so ill when we obtain new ones? The housekeeper says, I

never had any new crockery in my life but I began to break the old. I say, let us speak of mushrooms and forest trees rather. Yet we can sometimes afford to remember them in private.

Lately, alas, I knew a gentle boy,
Whose features all were cast in Virtue's mould,
As one she had designed for Beauty's toy,
But after manned him for her own stronghold.

On every side he open was as day,
That you might see no lack of strength within,
For walls and ports do only serve alway
For a pretense to feebleness and sin.

Say not that Cæsar was victorious,
With toil and strife who stormed the House of Fame,
In other sense this youth was glorious,
Himself a kingdom wheresoe'er he came.

No strength went out to get him victory,
When all was income of its own accord;
For where he went none other was to see,
But all were parcel of their noble lord.

He forayed like the subtile haze of summer,
That stilly shows fresh landscapes to our eyes,
And revolutions works without a murmur,
Or rustling of a leaf beneath the skies.

So was I taken unawares by this,
I quite forgot my homage to confess;
Yet now am forced to know, though hard it is,
I might have loved him had I loved him less.

Each moment as we nearer drew to each,
A stern respect withheld us farther yet,
So that we seemed beyond each other's reach,
And less acquainted than when first we met.

We two were one while we did sympathize,
So could we not the simplest bargain drive;
And what avails it now that we are wise,
If absence doth this doubleness contrive?

Eternity may not the chance repeat,
But I must tread my single way alone,
In sad remembrance that we once did meet,
And know that bliss irrevocably gone.

The spheres henceforth my elegy shall sing,
For elegy has other subject none;
Each strain of music in my ears shall ring
Knell of departure from that other one.

Make haste and celebrate my tragedy;
With fitting strain resound ye woods and fields;
Sorrow is dearer in such case to me
Than all the joys other occasion yields.

Is 't then too late the damage to repair?
Distance, forsooth, from my weak grasp hath reft
The empty husk, and clutched the useless tare,
But in my hands the wheat and kernel left.

If I but love that virtue which he is,
Though it be scented in the morning air,
Still shall we be truest acquaintances,
Nor mortals know a sympathy more rare.

Friendship is evanescent in every man's experience,
and remembered like heat lightning in past summers.
Fair and flitting like a summer cloud, — there is always
some vapor in the air, no matter how long the drought;
there are even April showers. Surely from time to time,
for its vestiges never depart, it floats through our atmo-
sphere. It takes place, like vegetation in so many mate-

rials, because there is such a law, but always without permanent form, though ancient and familiar as the sun and moon, and as sure to come again. The heart is forever inexperienced. They silently gather as by magic, these never failing, never quite deceiving visions, like the bright and fleecy clouds in the calmest and clearest days. The Friend is some fair floating isle of palms eluding the mariner in Pacific seas. Many are the dangers to be encountered, equinoctial gales and coral reefs, ere he may sail before the constant trades. But who would not sail through mutiny and storm, even over Atlantic waves, to reach the fabulous retreating shores of some continent man? The imagination still clings to the faintest tradition of

THE ATLANTIDES

The smothered streams of love, which flow
More bright than Phlegethon, more low,
Island us ever, like the sea,
In an Atlantic mystery.
Our fabled shores none ever reach,
No mariner has found our beach,
Scarcely our mirage now is seen,
And neighboring waves with floating green,
Yet still the oldest charts contain
Some dotted outline of our main;
In ancient times midsummer days
Unto the western islands' gaze,
To Teneriffe and the Azores,
Have shown our faint and cloud-like shores.

But sink not yet, ye desolate isles,
Anon your coast with commerce smiles,
And richer freights ye'll furnish far
Than Africa or Malabar.

Be fair, be fertile evermore,
Ye rumored but untrodden shore,
Princes and monarchs will contend
Who first unto your land shall send,
And pawn the jewels of the crown
To call your distant soil their own.

Columbus has sailed westward of these isles by the mariner's compass, but neither he nor his successors have found them. We are no nearer than Plato was. The earnest seeker and hopeful discoverer of this New World always haunts the outskirts of his time, and walks through the densest crowd uninterrupted, and, as it were, in a straight line.

Sea and land are but his neighbors,
And companions in his labors,
Who on the ocean's verge and firm land's end
Doth long and truly seek his Friend.
Many men dwell far inland,
But he alone sits on the strand.
Whether he ponders men or books
Always still he seaward looks,
Marine news he ever reads,
And the slightest glances heeds,
Feels the sea breeze on his cheek,
At each word the landsmen speak,
In every companion's eye
A sailing vessel doth descry;
In the ocean's sullen roar
From some distant port he hears
Of wrecks upon a distant shore,
And the ventures of past years.

Who does not walk on the plain as amid the columns of Tadmor of the desert? There is on the earth no institution which Friendship has established; it is not

taught by any religion; no scripture contains its maxims. It has no temple, nor even a solitary column. There goes a rumor that the earth is inhabited, but the shipwrecked mariner has not seen a footprint on the shore. The hunter has found only fragments of pottery and the monuments of inhabitants.

However, our fates at least are social. Our courses do not diverge; but as the web of destiny is woven it is fulfilled, and we are cast more and more into the centre. Men naturally, though feebly, seek this alliance, and their actions faintly foretell it. We are inclined to lay the chief stress on likeness and not on difference, and in foreign bodies we admit that there are many degrees of warmth below blood heat, but none of cold above it.

Mencius says: "If one loses a fowl or a dog, he knows well how to seek them again; if one loses the sentiments of his heart, he does not know how to seek them again. . . . The duties of practical philosophy consist only in seeking after those sentiments of the heart which we have lost; that is all."

One or two persons come to my house from time to time, there being proposed to them the faint possibility of intercourse. They are as full as they are silent, and wait for my plectrum to stir the strings of their lyre. If they could ever come to the length of a sentence, or hear one, on that ground they are dreaming of! They speak faintly, and do not obtrude themselves. They have heard some news, which none, not even they themselves, can impart. It is a wealth they can bear about them which

can be expended in various ways. What came they out to seek?

No word is oftener on the lips of men than Friendship, and indeed no thought is more familiar to their aspirations. All men are dreaming of it, and its drama, which is always a tragedy, is enacted daily. It is the secret of the universe. You may thread the town, you may wander the country, and none shall ever speak of it, yet thought is everywhere busy about it, and the idea of what is possible in this respect affects our behavior toward all new men and women, and a great many old ones. Nevertheless, I can remember only two or three essays on this subject in all literature. No wonder that the Mythology, and Arabian Nights, and Shakespeare, and Scott's novels entertain us, — we are poets and fablers and dramatists and novelists ourselves. We are continually acting a part in a more interesting drama than any written. We are dreaming that our Friends are our *Friends*, and that we are our Friends' *Friends*. Our actual Friends are but distant relations of those to whom we are pledged. We never exchange more than three words with a Friend in our lives on that level to which our thoughts and feelings almost habitually rise. One goes forth prepared to say, "Sweet Friends!" and the salutation is, "Damn your eyes!" But never mind; faint heart never won true Friend. O my Friend, may it come to pass once, that when you are my Friend I may be yours.

Of what use the friendliest dispositions even, if there are no hours given to Friendship, if it is forever postponed to unimportant duties and relations? Friendship

is first, Friendship last. But it is equally impossible to forget our Friends, and to make them answer to our ideal. When they say farewell, then indeed we begin to keep them company. How often we find ourselves turning our backs on our actual Friends, that we may go and meet their ideal cousins. I would that I were worthy to be any man's Friend.

What is commonly honored with the name of Friendship is no very profound or powerful instinct. Men do not, after all, *love* their Friends greatly. I do not often see the farmers made seers and wise to the verge of insanity by their Friendship for one another. They are not often transfigured and translated by love in each other's presence. I do not observe them purified, refined, and elevated by the love of a man. If one abates a little the price of his wood, or gives a neighbor his vote at town-meeting, or a barrel of apples, or lends him his wagon frequently, it is esteemed a rare instance of Friendship. Nor do the farmers' wives lead lives consecrated to Friendship. I do not see the pair of farmer Friends of either sex prepared to stand against the world. There are only two or three couples in history. To say that a man is your Friend means commonly no more than this, that he is not your enemy. Most contemplate only what would be the accidental and trifling advantages of Friendship, so that the Friend can assist in time of need, by his substance, or his influence, or his counsel; but he who foresees such advantages in this relation proves himself blind to its real advantage, or indeed wholly inexperienced in the relation itself. Such services are particular and menial, compared with the perpetual and

all-embracing service which it is. Even the utmost goodwill and harmony and practical kindness are not sufficient for Friendship, for Friends do not live in harmony merely, as some say, but in melody. We do not wish for Friends to feed and clothe our bodies, — neighbors are kind enough for that, — but to do the like office to our spirits. For this few are rich enough, however well disposed they may be. For the most part we stupidly confound one man with another. The dull distinguish only races or nations, or at most classes, but the wise man, individuals. To his Friend a man's peculiar character appears in every feature and in every action, and it is thus drawn out and improved by him.

Think of the importance of Friendship in the education of men.

“He that hath love and judgment too,
Sees more than any other doe.”

It will make a man honest; it will make him a hero; it will make him a saint. It is the state of the just dealing with the just, the magnanimous with the magnanimous, the sincere with the sincere, man with man.

And it is well said by another poet, —

“Why love among the virtues is not known,
It is that love contracts them all in one.”

All the abuses which are the object of reform with the philanthropist, the statesman, and the housekeeper are unconsciously amended in the intercourse of Friends. A Friend is one who incessantly pays us the compliment of expecting from us all the virtues, and who can appreciate them in us. It takes two to speak the truth, — one to speak, and another to hear. How can one treat with

magnanimity mere wood and stone? If we dealt only with the false and dishonest, we should at last forget how to speak truth. Only lovers know the value and magnanimity of truth, while traders prize a cheap honesty, and neighbors and acquaintance a cheap civility. In our daily intercourse with men, our nobler faculties are dormant and suffered to rust. None will pay us the compliment to expect nobleness from us. Though we have gold to give, they demand only copper. We ask our neighbor to suffer himself to be dealt with truly, sincerely, nobly; but he answers no by his deafness. He does not even hear this prayer. He says practically, I will be content if you treat me as "no better than I should be," as deceitful, mean, dishonest, and selfish. For the most part, we are contented so to deal and to be dealt with, and we do not think that for the mass of men there is any truer and nobler relation possible. A man may have *good* neighbors, so called, and acquaintances, and even companions, wife, parents, brothers, sisters, children, who meet himself and one another on this ground only. The state does not demand justice of its members, but thinks that it succeeds very well with the least degree of it, hardly more than rogues practice; and so do the neighborhood and the family. What is commonly called Friendship even is only a little more honor among rogues.

But sometimes we are said to *love* another, that is, to stand in a true relation to him, so that we give the best to, and receive the best from, him. Between whom there is hearty truth, there is love; and in proportion to our truthfulness and confidence in one another, our lives are divine and miraculous, and answer to our ideal.

There are passages of affection in our intercourse with mortal men and women, such as no prophecy had taught us to expect, which transcend our earthly life, and anticipate Heaven for us. What is this Love that may come right into the middle of a prosaic Goffstown day, equal to any of the gods? that discovers a new world, fair and fresh and eternal, occupying the place of the old one, when to the common eye a dust has settled on the universe? which world cannot else be reached, and does not exist. What other words, we may almost ask, are memorable and worthy to be repeated than those which love has inspired? It is wonderful that they were ever uttered. They are few and rare indeed, but, like a strain of music, they are incessantly repeated and modulated by the memory. All other words crumble off with the stucco which overlies the heart. We should not dare to repeat these now aloud. We are not competent to hear them at all times.

The books for young people say a great deal about the *selection* of Friends; it is because they really have nothing to say about *Friends*. They mean associates and confidants merely. "Know that the contrariety of foe and Friend proceeds from God." Friendship takes place between those who have an affinity for one another, and is a perfectly natural and inevitable result. No professions nor advances will avail. Even speech, at first, necessarily has nothing to do with it; but it follows after silence, as the buds in the graft do not put forth into leaves till long after the graft has taken. It is a drama in which the parties have no part to act. We are all Mussulmans and fatalists in this respect. Impatient and

uncertain lovers think that they must say or do something kind whenever they meet; they must never be cold. But they who are Friends do not do what they *think* they must, but what they *must*. Even their Friendship is to some extent but a sublime phenomenon to them.

The true and not despairing Friend will address his Friend in some such terms as these.

"I never asked thy leave to let me love thee, — I have a right. I love thee not as something private and personal, which is *your own*, but as something universal and worthy of love, *which I have found*. Oh, how I think of you! You are purely good, — you are infinitely good. I can trust you forever. I did not think that humanity was so rich. Give me an opportunity to live."

"You are the fact in a fiction, — you are the truth more strange and admirable than fiction. Consent only to be what you are. I alone will never stand in your way."

"This is what I would like, — to be as intimate with you as our spirits are intimate, — respecting you as I respect my ideal. Never to profane one another by word or action, even by a thought. Between us, if necessary, let there be no acquaintance."

"I have discovered you; how can you be concealed from me?"

The Friend asks no return but that his Friend will religiously accept and wear and not disgrace his apotheosis of him. They cherish each other's hopes. They are kind to each other's dreams.

Though the poet says, "'T is the preëminence of Friendship to impute excellence," yet we can never praise our Friend, nor esteem him praiseworthy, nor let

him think that he can please us by any *behavior*, or ever *treat* us well enough. That kindness which has so good a reputation elsewhere can least of all consist with this relation, and no such affront can be offered to a Friend as a conscious good-will, a friendliness which is not a necessity of the Friend's nature.

The sexes are naturally most strongly attracted to one another by constant constitutional differences, and are most commonly and surely the complements of each other. How natural and easy it is for man to secure the attention of woman to what interests himself! Men and women of equal culture, thrown together, are sure to be of a certain value to one another, more than men to men. There exists already a natural disinterestedness and liberality in such society, and I think that any man will more confidently carry his favorite books to read to some circle of intelligent women, than to one of his own sex. The visit of man to man is wont to be an interruption, but the sexes naturally expect one another. Yet Friendship is no respecter of sex; and perhaps it is more rare between the sexes than between two of the same sex.

Friendship is, at any rate, a relation of perfect equality. It cannot well spare any outward sign of equal obligation and advantage. The nobleman can never have a Friend among his retainers, nor the king among his subjects. Not that the parties to it are in all respects equal, but they are equal in all that respects or affects their Friendship. The one's love is exactly balanced and represented by the other's. Persons are only the vessels which contain the nectar, and the hydrostatic paradox is the symbol of love's law. It finds its level and

rises to its fountain-head in all breasts, and its slenderest column balances the ocean.

"And love as well the shepherd can
As can the mighty nobleman."

The one sex is not, in this respect, more tender than the other. A hero's love is as delicate as a maiden's.

Confucius said, "Never contract Friendship with a man who is not better than thyself." It is the merit and preservation of Friendship, that it takes place on a level higher than the actual characters of the parties would seem to warrant. The rays of light come to us in such a curve that every man whom we meet appears to be taller than he actually is. Such foundation has civility. My Friend is that one whom I can associate with my choicest thought. I always assign to him a nobler employment in my absence than I ever find him engaged in; and I imagine that the hours which he devotes to me were snatched from a higher society. The sorest insult which I ever received from a Friend was when he behaved with the license which only long and cheap acquaintance allows to one's faults, in my presence, without shame, and still addressed me in friendly accents. Beware, lest thy Friend learn at last to tolerate one frailty of thine, and so an obstacle be raised to the progress of thy love. There are times when we have had enough even of our Friends, when we begin inevitably to profane one another, and must withdraw religiously into solitude and silence, the better to prepare ourselves for a loftier intimacy. Silence is the ambrosial night in the intercourse of Friends, in which their sincerity is recruited and takes deeper root.

Friendship is never established as an understood relation. Do you demand that I be less your Friend that you may know it? Yet what right have I to think that another cherishes so rare a sentiment for me? It is a miracle which requires constant proofs. It is an exercise of the purest imagination and the rarest faith. It says by a silent but eloquent behavior, "I will be so related to thee as thou canst imagine; even so thou mayest believe. I will spend truth, — all my wealth on thee," — and the Friend responds silently through his nature and life, and treats his Friend with the same divine courtesy. He knows us literally through thick and thin. He never asks for a sign of love, but can distinguish it by the features which it naturally wears. We never need to stand upon ceremony with him with regard to his visits. Wait not till I invite thee, but observe that I am glad to see thee when thou comest. It would be paying too dear for thy visit to ask for it. Where my Friend lives there are all riches and every attraction, and no slight obstacle can keep me from him. Let me never have to tell thee what I have not to tell. Let our intercourse be wholly above ourselves, and draw us up to it.

The language of Friendship is not words, but meanings. It is an intelligence above language. One imagines endless conversations with his Friend, in which the tongue shall be loosed, and thoughts be spoken without hesitancy or end; but the experience is commonly far otherwise. Acquaintances may come and go, and have a word ready for every occasion; but what puny word shall he utter whose very breath is thought and meaning?

Suppose you go to bid farewell to your Friend who is setting out on a journey; what other outward sign do you know than to shake his hand? Have you any palaver ready for him then? any box of salve to commit to his pocket? any particular message to send by him? any statement which you had forgotten to make? — as if you could forget anything. No, it is much that you take his hand and say Farewell; that you could easily omit; so far custom has prevailed. It is even painful, if he is to go, that he should linger so long. If he must go, let him go quickly. Have you any *last* words? Alas, it is only the word of words, which you have so long sought and found not; *you* have not a *first* word yet. There are few even whom I should venture to call earnestly by their most proper names. A name pronounced is the recognition of the individual to whom it belongs. He who can pronounce my name aright, he can call me, and is entitled to my love and service. Yet reserve is the freedom and abandonment of lovers. It is the reserve of what is hostile or indifferent in their natures, to give place to what is kindred and harmonious.

The violence of love is as much to be dreaded as that of hate. When it is durable it is serene and equable. Even its famous pains begin only with the ebb of love, for few are indeed lovers, though all would fain be. It is one proof of a man's fitness for Friendship that he is able to do without that which is cheap and passionate. A true Friendship is as wise as it is tender. The parties to it yield implicitly to the guidance of their love, and know no other law nor kindness. It is not extravagant and insane, but what it says is something established

henceforth, and will bear to be stereotyped. It is a truer truth, it is better and fairer news, and no time will ever shame it, or prove it false. This is a plant which thrives best in a temperate zone, where summer and winter alternate with one another. The Friend is a *necessarius*, and meets his Friend on homely ground; not on carpets and cushions, but on the ground and on rocks they will sit, obeying the natural and primitive laws. They will meet without any outcry, and part without loud sorrow. Their relation implies such qualities as the warrior prizes; for it takes a valor to open the hearts of men as well as the gates of castles. It is not an idle sympathy and mutual consolation merely, but a heroic sympathy of aspiration and endeavor.

“When manhood shall be matched so
That fear can take no place,
Then weary *works* make warriors
Each other to embrace.”

The Friendship which Wawatam testified for Henry the fur-trader, as described in the latter's "Adventures," so almost bare and leafless, yet not blossomless nor fruitless, is remembered with satisfaction and security. The stern, imperturbable warrior, after fasting, solitude, and mortification of body, comes to the white man's lodge, and affirms that he is the white brother whom he saw in his dream, and adopts him henceforth. He buries the hatchet as it regards his friend, and they hunt and feast and make maple-sugar together. "Metals unite from fluxility; birds and beasts from motives of convenience; fools from fear and stupidity; and just men at sight." If Wawatam would taste the "white man's milk" with

his tribe, or take his bowl of human broth made of the trader's fellow-countrymen, he first finds a place of safety for his Friend, whom he has rescued from a similar fate. At length, after a long winter of undisturbed and happy intercourse in the family of the chieftain in the wilderness, hunting and fishing, they return in the spring to Michilimackinac to dispose of their furs; and it becomes necessary for Wawatam to take leave of his Friend at the Isle aux Outardes, when the latter, to avoid his enemies, proceeded to the Sault de Sainte Marie, supposing that they were to be separated for a short time only. "We now exchanged farewells," says Henry, "with an emotion entirely reciprocal. I did not quit the lodge without the most grateful sense of the many acts of goodness which I had experienced in it, nor without the sincerest respect for the virtues which I had witnessed among its members. All the family accompanied me to the beach; and the canoe had no sooner put off than Wawatam commenced an address to the Kichi Manito, beseeching him to take care of me, his brother, till we should next meet. We had proceeded to too great a distance to allow of our hearing his voice, before Wawatam had ceased to offer up his prayers." We never hear of him again.

Friendship is not so kind as is imagined; it has not much human blood in it, but consists with a certain disregard for men and their erections, the Christian duties and humanities, while it purifies the air like electricity. There may be the sternest tragedy in the relation of two more than usually innocent and true to their highest instincts. We may call it an essentially heathenish intercourse, free and irresponsible in its

nature, and practicing all the virtues gratuitously. It is not the highest sympathy merely, but a pure and lofty society, a fragmentary and godlike intercourse of ancient date, still kept up at intervals, which, remembering itself, does not hesitate to disregard the humbler rights and duties of humanity. It requires immaculate and godlike qualities full-grown, and exists at all only by condescension and anticipation of the remotest future. We love nothing which is merely good and not fair, if such a thing is possible. Nature puts some kind of blossom before every fruit, not simply a calyx behind it. When the Friend comes out of his heathenism and superstition, and breaks his idols, being converted by the precepts of a newer testament; when he forgets his mythology, and treats his Friend like a Christian, or as he can afford, — then Friendship ceases to be Friendship, and becomes charity; that principle which established the almshouse is now beginning with its charity at home, and establishing an almshouse and pauper relations there.

As for the number which this society admits, it is at any rate to be begun with one, the noblest and greatest that we know, and whether the world will ever carry it further, — whether, as Chaucer affirms, —

“There be mo sterres in the skie than a pair,”

remains to be proved; —

“And certaine he is well begone

Among a thousand that findeth one.”

We shall not surrender ourselves heartily to any while

we are conscious that another is more deserving of our love. Yet Friendship does not stand for numbers; the Friend does not count his Friends on his fingers; they are not numerable. The more there are included by this bond, if they are indeed included, the rarer and diviner the quality of the love that binds them. I am ready to believe that as private and intimate a relation may exist by which three are embraced, as between two. Indeed, we cannot have too many friends; the virtue which we appreciate we to some extent appropriate, so that thus we are made at last more fit for every relation of life. A base Friendship is of a narrowing and exclusive tendency, but a noble one is not exclusive; its very superfluity and dispersed love is the humanity which sweetens society, and sympathizes with foreign nations; for though its foundations are private, it is, in effect, a public affair and a public advantage, and the Friend, more than the father of a family, deserves well of the state.

The only danger in Friendship is that it will end. It is a delicate plant, though a native. The least unworthiness, even if it be unknown to one's self, vitiates it. Let the Friend know that those faults which he observes in his Friend his own faults attract. There is no rule more invariable than that we are paid for our suspicions by finding what we suspected. By our narrowness and prejudices we say, I will have so much and such of you, my Friend, no more. Perhaps there are none charitable, none disinterested, none wise, noble, and heroic enough, for a true and lasting Friendship.

I sometimes hear my Friends complain finely that I do not appreciate their fineness. I shall not tell them

whether I do or not. As if they expected a vote of thanks for every fine thing which they uttered or did. Who knows but it was finely appreciated? It may be that your silence was the finest thing of the two. There are some things which a man never speaks of, which are much finer kept silent about. To the highest communications we only lend a silent ear. Our finest relations are not simply kept silent about, but buried under a positive depth of silence never to be revealed. It may be that we are not even yet acquainted. In human intercourse the tragedy begins, not when there is misunderstanding about words, but when silence is not understood. Then there can never be an explanation. What avails it that another loves you, if he does not understand you? Such love is a curse. What sort of companions are they who are presuming always that their silence is more expressive than yours? How foolish, and inconsiderate, and unjust; to conduct as if you were the only party aggrieved! Has not your Friend always equal ground of complaint? No doubt my Friends sometimes speak to me in vain, but they do not know what things I hear which they are not aware that they have spoken. I know that I have frequently disappointed them by not giving them words when they expected them, or such as they expected. Whenever I see my Friend I speak to him; but the expecter, the man with the ears, is not he. They will complain too that you are hard. O ye that would have the cocoanut wrong side outwards, when next I weep I will let you know. They ask for words and deeds, when a true relation is word and deed. If they know not of these things, how can they be informed? We often

forbear to confess our feelings, not from pride, but for fear that we could not continue to love the one who required us to give such proof of our affection.

I know a woman who possesses a restless and intelligent mind, interested in her own culture, and earnest to enjoy the highest possible advantages, and I meet her with pleasure as a natural person who not a little provokes me, and I suppose is stimulated in turn by myself. Yet our acquaintance plainly does not attain to that degree of confidence and sentiment which women, which all, in fact, covet. I am glad to help her, as I am helped by her; I like very well to know her with a sort of stranger's privilege, and hesitate to visit her often, like her other Friends. My nature pauses here, I do not well know why. Perhaps she does not make the highest demand on me, a religious demand. Some, with whose prejudices or peculiar bias I have no sympathy, yet inspire me with confidence, and I trust that they confide in me also as a religious heathen at least, — a good Greek. I, too, have principles as well founded as their own. If this person could conceive that, without willfulness, I associate with her as far as our destinies are coincident, as far as our Good Geniuses permit, and still value such intercourse, it would be a grateful assurance to me. I feel as if I appeared careless, indifferent, and without principle to her, not expecting more, and yet not content with less. If she could know that I make an infinite demand on myself, as well as on all others, she would see that this true though incomplete intercourse is infinitely better than a more unreserved but falsely

grounded one, without the principle of growth in it. For a companion, I require one who will make an equal demand on me with my own genius. Such a one will always be rightly tolerant. It is suicide, and corrupts good manners, to welcome any less than this. I value and trust those who love and praise my aspiration rather than my performance. If you would not stop to look at me, but look whither I am looking, and farther, then my education could not dispense with your company.

My love must be as free
As is the eagle's wing,
Hovering o'er land and sea
And everything.

I must not dim my eye
In thy saloon,
I must not leave my sky
And nightly moon.

Be not the fowler's net
Which stays my flight,
And craftily is set
T' allure the sight.

But be the favoring gale
That bears me on,
And still doth fill my sail
When thou art gone.

I cannot leave my sky
For thy caprice,
True love would soar as high
As heaven is.

The eagle would not brook
Her mate thus won,
Who trained his eye to look
Beneath the sun.

Few things are more difficult than to help a Friend in matters which do not require the aid of Friendship, but only a cheap and trivial service, if your Friendship wants the basis of a thorough practical acquaintance. I stand in the friendliest relation, on social and spiritual grounds, to one who does not perceive what practical skill I have, but when he seeks my assistance in such matters, is wholly ignorant of that one with whom he deals; does not use my skill, which in such matters is much greater than his, but only my hands. I know another, who, on the contrary, is remarkable for his discrimination in this respect; who knows how to make use of the talents of others when he does not possess the same; knows when not to look after or oversee, and stops short at his man. It is a rare pleasure to serve him, which all laborers know. I am not a little pained by the other kind of treatment. It is as if, after the friendliest and most ennobling intercourse, your Friend should use you as a hammer, and drive a nail with your head, all in good faith; notwithstanding that you are a tolerable carpenter, as well as his good Friend, and would use a hammer cheerfully in his service. This want of perception is a defect which all the virtues of the heart cannot supply:—

The Good how can we trust?
Only the Wise are just.
The Good we use,
The Wise we cannot choose.
These there are none above;
The Good they know and love,
But are not known again
By those of lesser ken.

They do not charm us with their eyes,
But they transfix with their advice;
No partial sympathy they feel,
With private woe or private weal,
But with the universe joy and sigh,
Whose knowledge is their sympathy.

Confucius said: "To contract ties of Friendship with any one is to contract Friendship with his virtue. There ought not to be any other motive in Friendship." But men wish us to contract Friendship with their vice also. I have a Friend who wishes me to see that to be right which I know to be wrong. But if Friendship is to rob me of my eyes, if it is to darken the day, I will have none of it. It should be expansive and inconceivably liberalizing in its effects. True Friendship can afford true knowledge. It does not depend on darkness and ignorance. A want of discernment cannot be an ingredient in it. If I can see my Friend's virtues more distinctly than another's, his faults too are made more conspicuous by contrast. We have not so good a right to hate any as our Friend. Faults are not the less faults because they are invariably balanced by corresponding virtues, and for a fault there is no excuse, though it may appear greater than it is in many ways. I have never known one who could bear criticism, who could not be flattered, who would not bribe his judge, or was content that the truth should be loved always better than himself.

If two travelers would go their way harmoniously together, the one must take as true and just a view of things as the other, else their path will not be strewn with roses. Yet you can travel profitably and pleasantly even with a blind man, if he practices common courtesy, and

when you converse about the scenery will remember that he is blind but that you can see; and you will not forget that his sense of hearing is probably quickened by his want of sight. Otherwise you will not long keep company. A blind man and a man in whose eyes there was no defect were walking together, when they came to the edge of a precipice. "Take care, my friend," said the latter, "here is a steep precipice; go no farther this way." "I know better," said the other, and stepped off.

It is impossible to say all that we think, even to our truest Friend. We may bid him farewell forever sooner than complain, for our complaint is too well grounded to be uttered. There is not so good an understanding between any two, but the exposure by the one of a serious fault in the other will produce a misunderstanding in proportion to its heinousness. The constitutional differences which always exist, and are obstacles to a perfect Friendship, are forever a forbidden theme to the lips of Friends. They advise by their whole behavior. Nothing can reconcile them but love. They are fatally late when they undertake to explain and treat with one another like foes. Who will take an apology for a Friend? They must apologize like dew and frost, which are off again with the sun, and which all men know in their hearts to be beneficent. The necessity itself for explanation, — what explanation will atone for that?

True love does not quarrel for slight reasons, such mistakes as mutual acquaintances can explain away, but, alas, however slight the apparent cause, only for adequate and fatal and everlasting reasons, which can never be set aside. Its quarrel, if there is any, is ever

recurring, notwithstanding the beams of affection which invariably come to gild its tears; as the rainbow, however beautiful and unerring a sign, does not promise fair weather forever, but only for a season. I have known two or three persons pretty well, and yet I have never known advice to be of use but in trivial and transient matters. One may know what another does not, but the utmost kindness cannot impart what is requisite to make the advice useful. We must accept or refuse one another as we are. I could tame a hyena more easily than my Friend. He is a material which no tool of mine will work. A naked savage will fell an oak with a firebrand, and wear a hatchet out of a rock by friction, but I cannot hew the smallest chip out of the character of my Friend, either to beautify or deform it.

The lover learns at last that there is no person quite transparent and trustworthy, but every one has a devil in him that is capable of any crime in the long run. Yet, as an Oriental philosopher has said, "Although Friendship between good men is interrupted, their principles remain unaltered. The stalk of the lotus may be broken, and the fibres remain connected."

Ignorance and bungling with love are better than wisdom and skill without. There may be courtesy, there may be even temper, and wit, and talent, and sparkling conversation, there may be good-will even, — and yet the humanest and divinest faculties pine for exercise. Our life without love is like coke and ashes. Men may be pure as alabaster and Parian marble, elegant as a Tuscan villa, sublime as Niagara, and yet if there is no

milk mingled with the wine at their entertainments, better is the hospitality of Goths and Vandals.

My Friend is not of some other race or family of men, but flesh of my flesh, bone of my bone. He is my real brother. I see his nature groping yonder so like mine. We do not live far apart. Have not the fates associated us in many ways? It says, in the Vishnu Purana, "Seven paces together is sufficient for the friendship of the virtuous, but thou and I have dwelt together." Is it of no significance that we have so long partaken of the same loaf, drank at the same fountain, breathed the same air summer and winter, felt the same heat and cold; that the same fruits have been pleased to refresh us both, and we have never had a thought of different fibre the one from the other?

Nature doth have her dawn each day,
But mine are far between;
Content, I cry, for, sooth to say,
Mine brightest are, I ween.

For when my sun doth deign to rise,
Though it be her noontide,
Her fairest field in shadow lies
Nor can my light abide.

Sometimes I bask me in her day,
Conversing with my mate,
But if we interchange one ray,
Forthwith her heats abate.

Through his discourse I climb and see,
As from some eastern hill,
A brighter morrow rise to me
Than lieth in her skill.

As't were two summer days in one,
Two Sundays come together,
Our rays united make one sun,
With fairest summer weather.

As surely as the sunset in my latest November shall translate me to the ethereal world, and remind me of the ruddy morning of youth; as surely as the last strain of music which falls on my decaying ear shall make age to be forgotten, or, in short, the manifold influences of nature survive during the term of our natural life, so surely my Friend shall forever be my Friend, and reflect a ray of God to me, and time shall foster and adorn and consecrate our Friendship, no less than the ruins of temples. As I love nature, as I love singing birds, and gleaming stubble, and flowing rivers, and morning and evening, and summer and winter, I love thee, my Friend.

But all that can be said of Friendship is like botany to flowers. How can the understanding take account of its friendliness?

Even the death of Friends will inspire us as much as their lives. They will leave consolation to the mourners, as the rich leave money to defray the expenses of their funerals, and their memories will be incrustated over with sublime and pleasing thoughts, as monuments of other men are overgrown with moss; for our Friends have no place in the graveyard.

This to our cis-Alpine and cis-Atlantic Friends.

Also this other word of entreaty and advice to the large and respectable nation of Acquaintances, beyond the mountains; — Greeting.

My most serene and irresponsible neighbors, let us see that we have the whole advantage of each other; we will be useful, at least, if not admirable, to one another. I know that the mountains which separate us are high, and covered with perpetual snow, but despair not. Improve the serene winter weather to scale them. If need be, soften the rocks with vinegar. For here lie the verdant plains of Italy ready to receive you. Nor shall I be slow on my side to penetrate to your Provence. Strike then boldly at head or heart or any vital part. Depend upon it, the timber is well seasoned and tough, and will bear rough usage; and if it should crack, there is plenty more where it came from. I am no piece of crockery that cannot be jostled against my neighbor without danger of being broken by the collision, and must needs ring false and jarringly to the end of my days, when once I am cracked; but rather one of the old-fashioned wooden trenchers, which one while stands at the head of the table, and at another is a milking-stool, and at another a seat for children, and finally goes down to its grave not unadorned with honorable scars, and does not die till it is worn out. Nothing can shock a brave man but dullness. Think how many rebuffs every man has experienced in his day; perhaps has fallen into a horse-pond, eaten fresh-water clams, or worn one shirt for a week without washing. Indeed, you cannot receive a shock unless you have an electric affinity for that which shocks you. Use me, then, for I am useful in my way, and stand as one of many petitioners, from toadstool and henbane up to dahlia and violet, supplicating to be put to my use, if by any means ye may find me serviceable:

whether for a medicated drink or bath, as balm and lavender; or for fragrance, as verbenas and geraniums; or for sight, as cactus; or for thoughts, as pansy. These humbler, at least, if not those higher uses.

Ah, my dear Strangers and Enemies, I would not forget you. I can well afford to welcome you. Let me subscribe myself Yours ever and truly, — your much obliged servant. We have nothing to fear from our foes; God keeps a standing army for that service; but we have no ally against our Friends, those ruthless Vandals.

Once more to one and all, —

“Friends, Romans, Countrymen, and Lovers.”

Let such pure hate still underprop
Our love, that we may be
Each other's conscience,
And have our sympathy
Mainly from thence.

We'll one another treat like gods,
And all the faith we have
In virtue and in truth, bestow
On either, and suspicion leave
To gods below.

Two solitary stars, —
Unmeasured systems far
Between us roll,
But by our conscious light we are
Determined to one pole.

What need confound the sphere? —
Love can afford to wait,
For it no hour's too late
That witnesseth one duty's end,
Or to another doth beginning lend.

It will subserve no use,
More than the tints of flowers,
Only the independent guest
Frequents its bowers,
Inherits its bequest.

No speech though kind has it,
But kinder silence doles
Unto its mates,
By night consoles,
By day congratulates.

What saith the tongue to tongue?
What heareth ear of ear?
By the decrees of fate
From year to year,
Does it communicate.

Pathless the gulf of feeling yawns, —
No trivial bridge of words,
Or arch of boldest span,
Can leap the moat that girds
The sincere man.

No show of bolts and bars
Can keep the foeman out,
Or 'scape his secret mine
Who entered with the doubt
That drew the line.

No warder at the gate
Can let the friendly in,
But, like the sun, o'er all
He will the castle win,
And shine along the wall.

There's nothing in the world I know
That can escape from love,
For every depth it goes below,
And every height above.

It waits as waits the sky,
Until the clouds go by,
Yet shines serenely on
With an eternal day,
Alike when they are gone,
And when they stay.

Implacable is Love, —
Foes may be bought or teased
From their hostile intent,
But he goes unappeased
Who is on kindness bent.

Having rowed five or six miles above Amoskeag before sunset, and reached a pleasant part of the river, one of us landed to look for a farmhouse, where we might replenish our stores, while the other remained cruising about the stream, and exploring the opposite shores to find a suitable harbor for the night. In the mean while the canal-boats began to come round a point in our rear, poling their way along close to the shore, the breeze having quite died away. This time there was no offer of assistance, but one of the boatmen only called out to say as the truest revenge for having been the losers in the race, that he had seen a wood duck, which we had scared up, sitting on a tall, white pine, half a mile down-stream; and he repeated the assertion several times, and seemed really chagrined at the apparent suspicion with which this information was received. But there sat the summer duck still, undisturbed by us.

By and by the other voyageur returned from his inland expedition, bringing one of the natives with him, a little flaxen-headed boy, with some tradition, or small edition, of Robinson Crusoe in his head, who had been

charmed by the account of our adventures, and asked his father's leave to join us. He examined, at first from the top of the bank, our boat and furniture, with sparkling eyes, and wished himself already his own man. He was a lively and interesting boy, and we should have been glad to ship him; but Nathan was still his father's boy, and had not come to years of discretion.

We had got a loaf of home-made bread, and musk and water melons for dessert. For this farmer, a clever and well-disposed man, cultivated a large patch of melons for the Hooksett and Concord markets. He hospitably entertained us the next day, exhibiting his hop-fields and kiln and melon-patch, warning us to step over the tight rope which surrounded the latter at a foot from the ground, while he pointed to a little bower at one corner, where it connected with the lock of a gun ranging with the line, and where, as he informed us, he sometimes sat in pleasant nights to defend his premises against thieves. We stepped high over the line, and sympathized with our host's on the whole quite human, if not humane, interest in the success of his experiment. That night especially thieves were to be expected, from rumors in the atmosphere, and the priming was not wet. He was a Methodist man, who had his dwelling between the river and Uncannunuc Mountain; who there belonged, and stayed at home there, and by the encouragement of distant political organizations, and by his own tenacity, held a property in his melons, and continued to plant. We suggested melon seeds of new varieties and fruit of foreign flavor to be added to his stock. We had come away up here among the hills to learn the impartial and

unbribable beneficence of Nature. Strawberries and melons grow as well in one man's garden as another's, and the sun lodges as kindly under his hillside, — when we had imagined that she inclined rather to some few earnest and faithful souls whom we know.

We found a convenient harbor for our boat on the opposite or east shore, still in Hooksett, at the mouth of a small brook which emptied into the Merrimack, where it would be out of the way of any passing boat in the night, — for they commonly hug the shore if bound upstream, either to avoid the current or touch the bottom with their poles, — and where it would be accessible without stepping on the clayey shore. We set one of our largest melons to cool in the still water among the alders at the mouth of this creek, but when our tent was pitched and ready, and we went to get it, it had floated out into the stream, and was nowhere to be seen. So taking the boat in the twilight, we went in pursuit of this property, and at length, after long straining of the eyes, its green disk was discovered far down the river, gently floating seaward with many twigs and leaves from the mountains that evening, and so perfectly balanced that it had not keeled at all, and no water had run in at the tap which had been taken out to hasten its cooling.

As we sat on the bank eating our supper, the clear light of the western sky fell on the eastern trees, and was reflected in the water, and we enjoyed so serene an evening as left nothing to describe. For the most part we think that there are few degrees of sublimity, and that the highest is but little higher than that which we now behold; but we are always deceived. Sublimier

visions appear, and the former pale and fade away. We are grateful when we are reminded by interior evidence of the permanence of universal laws; for our faith is but faintly remembered, indeed, is not a remembered assurance, but a use and enjoyment of knowledge. It is when we do not have to believe, but come into actual contact with Truth, and are related to her in the most direct and intimate way. Waves of serener life pass over us from time to time, like flakes of sunlight over the fields in cloudy weather. In some happier moment, when more sap flows in the withered stalk of our life, Syria and India stretch away from our present as they do in history. All the events which make the annals of the nations are but the shadows of our private experiences. Suddenly and silently the eras which we call history awake and glimmer in us, and *there* is room for Alexander and Hannibal to march and conquer. In short, the history which we read is only a fainter memory of events which have happened in our own experience. Tradition is a more interrupted and feebler memory.

This world is but canvas to our imaginations. I see men with infinite pains endeavoring to realize to their bodies, what I, with at least equal pains, would realize to my imagination, — its capacities; for certainly there is a life of the mind above the wants of the body, and independent of it. Often the body is warmed, but the imagination is torpid; the body is fat, but the imagination is lean and shrunk. But what avails all other wealth if this is wanting? "Imagination is the air of mind," in which it lives and breathes. All things are as I am. Where is the House of Change? The past is only so

heroic as we see it. It is the canvas on which our idea of heroism is painted, and so, in one sense, the dim prospectus of our future field. Our circumstances answer to our expectations and the demand of our natures. I have noticed that if a man thinks that he needs a thousand dollars, and cannot be convinced that he does not, he will commonly be found to have them; if he lives and thinks, a thousand dollars will be forthcoming, though it be to buy shoe-strings with. A thousand mills will be just as slow to come to one who finds it equally hard to convince himself that he needs *them*.

Men are by birth equal in this, that given
Themselves and their condition, they are even.

I am astonished at the singular pertinacity and endurance of our lives. The miracle is, that what is *is*, when it is so difficult, if not impossible, for anything else to be; that we walk on in our particular paths so far, before we fall on death and fate, merely because we must walk in some path; that every man can get a living, and so few can do anything more. So much only can I accomplish ere health and strength are gone, and yet this suffices. The bird now sits just out of gunshot. I am never rich in money, and I am never meanly poor. If debts are incurred, why, debts are in the course of events canceled, as it were, by the same law by which they were incurred. I heard that an engagement was entered into between a certain youth and a maiden, and then I heard that it was broken off, but I did not know the reason in either case. We are hedged about, we think, by accident and circumstance; now we creep as in a dream, and now again we run, as if there were a fate

in it, and all things thwarted or assisted. I cannot change my clothes but when I do, and yet I do change them, and soil the new ones. It is wonderful that this gets done, when some admirable deeds which I could mention do not get done. Our particular lives seem of such fortune and confident strength and durability as piers of solid rock thrown forward into the tide of circumstance. When every other path would fail, with singular and unerring confidence we advance on our particular course. What risks we run! famine and fire and pestilence, and the thousand forms of a cruel fate, —and yet every man lives till he—dies. How did he manage that? Is there no immediate danger? We wonder superfluously when we hear of a somnambulist walking a plank securely, — we have walked a plank all our lives up to this particular string-piece where we are. My life will wait for nobody, but is being matured still without delay, while I go about the streets, and chaffer with this man and that to secure it a living. It is as indifferent and easy meanwhile as a poor man's dog, and making acquaintance with its kind. It will cut its own channel like a mountain stream, and by the longest ridge is not kept from the sea at last. I have found all things thus far, persons and inanimate matter, elements and seasons, strangely adapted to my resources. No matter what imprudent haste in my career; I am permitted to be rash. Gulfs are bridged in a twinkling, as if some unseen baggage train carried pontoons for my convenience, and while from the heights I scan the tempting but unexplored Pacific Ocean of Futurity, the ship is being carried over the mountains piecemeal on

the backs of mules and llamas, whose keel shall plow its waves, and bear me to the Indies. Day would not dawn if it were not for

THE INWARD MORNING

Packed in my mind lie all the clothes
Which outward nature wears,
And in its fashion's hourly change
It all things else repairs.

In vain I look for change abroad,
And can no difference find,
Till some new ray of peace uncalled
Illumes my inmost mind.

What is it gilds the trees and clouds,
And paints the heavens so gay,
But yonder fast-abiding light
With its unchanging ray?

Lo, when the sun streams through the wood,
Upon a winter's morn,
Where'er his silent beams intrude
The murky night is gone.

How could the patient pine have known
The morning breeze would come,
Or humble flowers anticipate
The insect's noonday hum, —

Till the new light with morning cheer
From far streamed through the aisles,
And nimbly told the forest trees
For many stretching miles?

I've heard within my inmost soul
Such cheerful morning news,
In the horizon of my mind
Have seen such orient hues,

As in the twilight of the dawn,
When the first birds awake,
Are heard within some silent wood,
Where they the small twigs break,

Or in the eastern skies are seen,
Before the sun appears,
The harbingers of summer heats
Which from afar he bears.

Whole weeks and months of my summer life slide away in thin volumes like mist and smoke, till at length, some warm morning, perchance, I see a sheet of mist blown down the brook to the swamp, and I float as high above the fields with it. I can recall to mind the stillest summer hours, in which the grasshopper sings over the mulleins, and there is a valor in that time the bare memory of which is armor that can laugh at any blow of fortune. For our lifetime the strains of a harp are heard to swell and die alternately, and death is but "the pause when the blast is recollecting itself."

We lay awake a long while listening to the murmurs of the brook, in the angle formed by whose bank with the river our tent was pitched, and there was a sort of man interest in its story, which ceases not in freshet or in drought the livelong summer, and the profounder lapse of the river was quite drowned by its din. But the rill, whose

"Silver sands and pebbles sing
Eternal ditties with the spring,"

is silenced by the first frosts of winter, while mightier streams, on whose bottom the sun never shines, clogged

with sunken rocks and the ruins of forests, from whose surface comes up no murmur, are strangers to the icy fetters which bind fast a thousand contributory rills.

I dreamed this night of an event which had occurred long before. It was a difference with a Friend, which had not ceased to give me pain, though I had no cause to blame myself. But in my dream ideal justice was at length done me for his suspicions, and I received that compensation which I had never obtained in my waking hours. I was unspeakably soothed and rejoiced, even after I awoke, because in dreams we never deceive ourselves, nor are deceived, and this seemed to have the authority of a final judgment.

We bless and curse ourselves. Some dreams are divine, as well as some waking thoughts. Donne sings of one

“Who dreamt devoutlier than most use to pray.”

Dreams are the touchstones of our characters. We are scarcely less afflicted when we remember some unworthiness in our conduct in a dream, than if it had been actual, and the intensity of our grief, which is our atonement, measures the degree by which this is separated from an actual unworthiness. For in dreams we but act a part which must have been learned and rehearsed in our waking hours, and no doubt could discover some waking consent thereto. If this meanness had not its foundation in us, why are we grieved at it? In dreams we see ourselves naked and acting out our real characters, even more clearly than we see others awake. But an unwavering and commanding virtue would compel

even its most fantastic and faintest dreams to respect its ever-wakeful authority; as we are accustomed to say carelessly, we should never have *dreamed* of such a thing. Our truest life is when we are in dreams awake.

“And, more to lulle him in his slumber soft,
A trickling streame from high rock tumbling downe,
And ever-drizzling raine upon the loft,
Mixt with a murmuring winde, much like the sowne
Of swarming bees, did cast him in a swowne,
No other noyse, nor people's troublous cryes,
As still are wont t' annoy the walled towne,
Might there be heard; but careless Quiet lyes
Wrapt in eternall silence farre from enemyes.”

THURSDAY

He trode the unplanted forest floor, whereon
The all-seeing sun for ages hath not shone;
Where feeds the moose, and walks the surly bear,
And up the tall mast runs the woodpecker.

.
Where darkness found him he lay glad at night;
There the red morning touched him with its light.

.
Go where he will, the wise man is at home,
His hearth the earth, — his hall the azure dome;
Where his clear spirit leads him, there 's his road,
By God's own light illumined and foreshowed.

EMERSON.

WHEN we awoke this morning, we heard the faint, deliberate, and ominous sound of raindrops on our cotton roof. The rain had pattered all night, and now the whole country wept, the drops falling in the river, and on the alders, and in the pastures, and instead of any bow in the heavens, there was the trill of the hair-bird all the morning. The cheery faith of this little bird atoned for the silence of the whole woodland choir beside. When we first stepped abroad, a flock of sheep, led by their rams, came rushing down a ravine in our rear, with heedless haste and unreserved frisking, as if unobserved by man, from some higher pasture where they had spent the night, to taste the herbage by the riverside ; but when their leaders caught sight

of our white tent through the mist, struck with sudden astonishment, with their fore feet braced, they sustained the rushing torrent in their rear, and the whole flock stood stock-still, endeavoring to solve the mystery in their sheepish brains. At length, concluding that it boded no mischief to them, they spread themselves out quietly over the field. We learned afterward that we had pitched our tent on the very spot which a few summers before had been occupied by a party of Penobscots. We could see rising before us through the mist a dark conical eminence called Hooksett Pinnacle, a landmark to boatmen, and also Uncannunuc Mountain, broad off on the west side of the river.

This was the limit of our voyage, for a few hours more in the rain would have taken us to the last of the locks, and our boat was too heavy to be dragged around the long and numerous rapids which would occur. On foot, however, we continued up along the bank, feeling our way with a stick through the showery and foggy day, and climbing over the slippery logs in our path with as much pleasure and buoyancy as in brightest sunshine ; scenting the fragrance of the pines and the wet clay under our feet, and cheered by the tones of invisible waterfalls ; with visions of toadstools, and wandering frogs, and festoons of moss hanging from the spruce trees, and thrushes flitting silent under the leaves ; our road still holding together through that wettest of weather, like faith, while we confidently followed its lead. We managed to keep our thoughts dry, however, and only our clothes were wet. It was altogether a cloudy and drizzling day, with occasional

brightenings in the mist, when the trill of the tree sparrow seemed to be ushering in sunny hours.

“Nothing that naturally happens to man can *hurt* him, earthquakes and thunder-storms not excepted,” said a man of genius, who at this time lived a few miles farther on our road. When compelled by a shower to take shelter under a tree, we may improve that opportunity for a more minute inspection of some of Nature’s works. I have stood under a tree in the woods half a day at a time, during a heavy rain in the summer, and yet employed myself happily and profitably there prying with microscopic eye into the crevices of the bark or the leaves of the fungi at my feet. “Riches are the attendants of the miser; and the heavens rain plenteously upon the mountains.” I can fancy that it would be a luxury to stand up to one’s chin in some retired swamp a whole summer day, scenting the wild honeysuckle and bilberry blows, and lulled by the minstrelsy of gnats and mosquitoes ! A day passed in the society of those Greek sages, such as described in the Banquet of Xenophon, would not be comparable with the dry wit of decayed cranberry vines, and the fresh Attic salt of the moss-beds. Say twelve hours of genial and familiar converse with the leopard frog ; the sun to rise behind alder and dogwood, and climb buoyantly to his meridian of two hands’ breadth, and finally sink to rest behind some bold western hummock. To hear the evening chant of the mosquito from a thousand green chapels, and the bittern begin to boom from some concealed fort like a sunset gun ! Surely one may as profitably be soaked in

the juices of a swamp for one day as pick his way dry-shod over sand. Cold and damp, — are they not as rich experience as warmth and dryness?

At present, the drops come trickling down the stubble while we lie drenched on a bed of withered wild oats, by the side of a bushy hill; and the gathering in of the clouds, with the last rush and dying breath of the wind, and then the regular dripping of twigs and leaves the country over, enhance the sense of inward comfort and sociableness. The birds draw closer and are more familiar under the thick foliage, seemingly composing new strains upon their roots against the sunshine. What were the amusements of the drawing-room and the library in comparison, if we had them here? We should still sing as of old, —

My books I'd fain cast off, I cannot read;
'Twixt every page my thoughts go stray at large
Down in the meadow, where is richer feed,
And will not mind to hit their proper targe.

Plutarch was good, and so was Homer too,
Our Shakespeare's life were rich to live again;
What Plutarch read, that was not good nor true,
Nor Shakespeare's books, unless his books were men.

Here while I lie beneath this walnut bough,
What care I for the Greeks or for Troy town,
If juster battles are enacted now
Between the ants upon this hummock's crown?

Bid Homer wait till I the issue learn,
If red or black the gods will favor most,
Or yonder Ajax will the phalanx turn,
Struggling to heave some rock against the host.

Tell Shakespeare to attend some leisure hour,
For now I've business with this drop of dew,
And see you not, the clouds prepare a shower, —
I'll meet him shortly when the sky is blue.

This bed of herd's-grass and wild oats was spread
Last year with nicer skill than monarchs use,
A clover tuft is pillow for my head,
And violets quite overtop my shoes.

And now the cordial clouds have shut all in,
And gently swells the wind to say all's well,
The scattered drops are falling fast and thin,
Some in the pool, some in the flower-bell.

I am well drenched upon my bed of oats;
But see that globe come rolling down its stem;
Now like a lonely planet there it floats,
And now it sinks into my garment's hem.

Drip, drip the trees for all the country round,
And richness rare distills from every bough,
The wind alone it is makes every sound,
Shaking down crystals on the leaves below.

For shame the sun will never show himself,
Who could not with his beams e'er melt me so,
My dripping locks, — they would become an elf,
Who in a beaded coat does gayly go.

The Pinnacle is a small wooded hill which rises very abruptly to the height of about two hundred feet, near the shore at Hooksett Falls. As Uncannunuc Mountain is perhaps the best point from which to view the valley of the Merrimack, so this hill affords the best view of the river itself. I have sat upon its summit, a precipitous rock only a few rods long, in fairer

weather, when the sun was setting and filling the river valley with a flood of light. You can see up and down the Merrimack several miles each way. The broad and straight river, full of light and life, with its sparkling and foaming falls, the islet which divides the stream, the village of Hooksett on the shore almost directly under your feet, so near that you can converse with its inhabitants or throw a stone into its yards, the woodland lake at its western base, and the mountains in the north and northeast, make a scene of rare beauty and completeness, which the traveler should take pains to behold.

We were hospitably entertained in Concord, New Hampshire, which we persisted in calling *New Concord*, as we had been wont, to distinguish it from our native town, from which we had been told that it was named and in part originally settled. This would have been the proper place to conclude our voyage, uniting Concord with Concord by these meandering rivers, but our boat was moored some miles below its port.

The richness of the intervals at Penacook, now Concord, New Hampshire, had been observed by explorers, and, according to the historian of Haverhill, in the "year 1726, considerable progress was made in the settlement, and a road was cut through the wilderness from Haverhill to Penacook. In the fall of 1727, the first family, that of Captain Ebenezer Eastman, moved into the place. His team was driven by Jacob Shute, who was by birth a Frenchman, and he is said to have been the first person who drove a team through the wilderness. Soon after,

says tradition, one Ayer, a lad of eighteen, drove a team consisting of ten yoke of oxen to Penacook, swam the river, and ploughed a portion of the interval. He is supposed to have been the first person who ploughed land in that place. After he had completed his work, he started on his return at sunrise, drowned a yoke of oxen while recrossing the river, and arrived at Haverhill about midnight. The crank of the first saw-mill was manufactured in Haverhill, and carried to Penacook on a horse."

But we found that the frontiers were not this way any longer. This generation has come into the world fatally late for some enterprises. Go where we will on the *surface* of things, men have been there before us. We cannot now have the pleasure of erecting the *last* house; that was long ago set up in the suburbs of Astoria City, and our boundaries have literally been run to the South Sea, according to the old patents. But the lives of men, though more extended laterally in their range, are still as shallow as ever. Undoubtedly, as a Western orator said, "Men generally live over about the same surface; some live long and narrow, and others live broad and short;" but it is all superficial living. A worm is as good a traveler as a grasshopper or a cricket, and a much wiser settler. With all their activity these do not hop away from drought nor forward to summer. We do not avoid evil by fleeing before it, but by rising above or diving below its plane; as the worm escapes drought and frost by boring a few inches deeper. The frontiers are not east or west, north or south; but wherever a man *fronts* a fact, though that

fact be his neighbor, there is an unsettled wilderness between him and Canada, between him and the setting sun, or, farther still, between him and *it*. Let him build himself a log house with the bark on where he is, *fronting* IT, and wage there an Old French war for seven or seventy years, with Indians and Rangers, or whatever else may come between him and the reality, and save his scalp if he can.

We now no longer sailed or floated on the river, but trod the unyielding land like pilgrims. Sadi tells who may travel; among others, "A common mechanic, who can earn a subsistence by the industry of his hand, and shall not have to stake his reputation for every morsel of bread, as philosophers have said." He may travel who can subsist on the wild fruits and game of the most cultivated country. A man may travel fast enough and earn his living on the road. I have at times been applied to, to do work when on a journey; to do tinkering and repair clocks, when I had a knapsack on my back. A man once applied to me to go into a factory, stating conditions and wages, observing that I succeeded in shutting the window of a railroad car in which we were traveling, when the other passengers had failed. "Hast thou not heard of a Sufi, who was hammering some nails into the sole of his sandal; an officer of cavalry took him by the sleeve, saying, Come along and shoe my horse." Farmers have asked me to assist them in haying when I was passing their fields. A man once applied to me to mend his umbrella, taking me for an umbrella-

mender, because, being on a journey, I carried an umbrella in my hand while the sun shone. Another wished to buy a tin cup of me, observing that I had one strapped to my belt, and a sauce-pan on my back. The cheapest way to travel, and the way to travel the farthest in the shortest distance, is to go afoot, carrying a dipper, a spoon, and a fish line, some Indian meal, some salt, and some sugar. When you come to a brook or a pond, you can catch fish and cook them; or you can boil a hasty-pudding; or you can buy a loaf of bread at a farmer's house for fourpence, moisten it in the next brook that crosses the road, and dip it into your sugar,—this alone will last you a whole day;—or, if you are accustomed to heartier living, you can buy a quart of milk for two cents, crumb your bread or cold pudding into it, and eat it with your own spoon out of your own dish. Any one of these things I mean, not all together. I have traveled thus some hundreds of miles without taking any meal in a house, sleeping on the ground when convenient, and found it cheaper, and in many respects more profitable, than staying at home. So that some have inquired why it would not be best to travel always. But I never thought of traveling simply as a means of getting a livelihood. A simple woman down in Tyngsborough, at whose house I once stopped to get a draught of water, when I said, recognizing the bucket, that I had stopped there nine years before for the same purpose, asked if I was not a traveler, supposing I had been traveling ever since, and had now come round again; that traveling was one of the professions,

more or less productive, which her husband did not follow. But continued traveling is far from productive. It begins with wearing away the soles of the shoes, and making the feet sore, and ere long it will wear a man clean up, after making his heart sore into the bargain. I have observed that the after life of those who have traveled much is very pathetic. True and sincere traveling is no pastime, but it is as serious as the grave, or any part of the human journey, and it requires a long probation to be broken into it. I do not speak of those that travel sitting, the sedentary travelers whose legs hang dangling the while, mere idle symbols of the fact, any more than when we speak of sitting hens we mean those that sit standing, but I mean those to whom traveling is life for the legs, and death too, at last. The traveler must be born again on the road, and earn a passport from the elements, the principal powers that be for him. He shall experience at last that old threat of his mother fulfilled, that he shall be skinned alive. His sores shall gradually deepen themselves that they may heal inwardly, while he gives no rest to the sole of his foot, and at night weariness must be his pillow, that so he may acquire experience against his rainy days. So was it with us.

Sometimes we lodged at an inn in the woods, where trout-fishers from distant cities had arrived before us, and where, to our astonishment, the settlers dropped in at nightfall to have a chat and hear the news, though there was but one road, and no other house was visible, — as if they had come out of the earth. There we sometimes read old newspapers, who never before read

new ones, and in the rustle of their leaves heard the dashing of the surf along the Atlantic shore, instead of the sough of the wind among the pines. But then walking had given us an appetite even for the least palatable and nutritious food.

Some hard and dry book in a dead language, which you have found it impossible to read at home, but for which you have still a lingering regard, is the best to carry with you on a journey. At a country inn, in the barren society of ostlers and travelers, I could undertake the writers of the silver or the brazen age with confidence. Almost the last regular service which I performed in the cause of literature was to read the works of

AULUS PERSIUS FLACCUS.

If you have imagined what a divine work is spread out for the poet, and approach this author too, in the hope of finding the field at length fairly entered on, you will hardly dissent from the words of the prologue, —

“Ipse semipaganus
Ad sacra Vatum carmen affero nostrum.”

I half pagan
Bring my verses to the shrine of the poets.

Here is none of the interior dignity of Virgil, nor the elegance and vivacity of Horace, nor will any sibyl be needed to remind you that from those older Greek poets there is a sad descent to Persius. You can scarcely distinguish one harmonious sound amid this unmusical bickering with the follies of men.

One sees that music has its place in thought, but

hardly as yet in language. When the Muse arrives, we wait for her to remould language, and impart to it her own rhythm. Hitherto the verse groans and labors with its load, and goes not forward blithely, singing by the way. The best ode may be parodied, indeed is itself a parody, and has a poor and trivial sound, like a man stepping on the rounds of a ladder. Homer and Shakespeare and Milton and Marvell and Wordsworth are but the rustling of leaves and crackling of twigs in the forest, and there is not yet the sound of any bird. The Muse has never lifted up her voice to sing. Most of all, satire will not be sung. A Juvenal or Persius do not marry music to their verse, but are measured fault-finders at best ; stand but just outside the faults they condemn, and so are concerned rather about the monster which they have escaped than the fair prospect before them. Let them live on an age, and they will have traveled out of his shadow and reach, and found other objects to ponder.

As long as there is satire, the poet is, as it were, *particeps criminis*. One sees not but he had best let bad take care of itself, and have to do only with what is beyond suspicion. If you light on the least vestige of truth, and it is the weight of the whole body still which stamps the faintest trace, an eternity will not suffice to extol it, while no evil is so huge, but you grudge to bestow on it a moment of hate. Truth never turns to rebuke falsehood ; her own straightforwardness is the severest correction. Horace would not have written satire so well if he had not been inspired by it, as by a passion, and fondly cherished his vein. In his odes, the love always

exceeds the hate, so that the severest satire still sings itself, and the poet is satisfied, though the folly be not corrected.

A sort of necessary order in the development of Genius is, first, Complaint; second, Plaint; third, Love. Complaint, which is the condition of Persius, lies not in the province of poetry. Ere long the enjoyment of a superior good would have changed his disgust into regret. We can never have much sympathy with the complainer; for after searching nature through, we conclude that he must be both plaintiff and defendant too, and so had best come to a settlement without a hearing. He who receives an injury is to some extent an accomplice of the wrong-doer.

Perhaps it would be truer to say, that the highest strain of the muse is essentially plaintive. The saint's are still *tears* of joy. Who has ever heard the *Innocent* sing?

But the divinest poem, or the life of a great man, is the severest satire; as impersonal as Nature herself, and like the sighs of her winds in the woods, which convey ever a slight reproof to the hearer. The greater the genius, the keener the edge of the satire.

Hence we have to do only with the rare and fragmentary traits, which least belong to Persius, or shall we say, are the properest utterances of his muse; since that which he says best at any time is what he can best say at all times. The Spectators and Ramblers have not failed to cull some quotable sentences from this garden too, so pleasant is it to meet even the most familiar truth in a new dress, when, if our neigh-

bor had said it, we should have passed it by as hackneyed. Out of these six satires, you may perhaps select some twenty lines, which fit so well as many thoughts, that they will recur to the scholar almost as readily as a natural image; though when translated into familiar language, they lose that insular emphasis which fitted them for quotation. Such lines as the following, translation cannot render commonplace. Contrasting the man of true religion with those who, with jealous privacy, would fain carry on a secret commerce with the gods, he says: —

“Haud cuivis promptum est, murmurque humilesque susurros
Tollere de templis; et aperto vivere voto.”

It is not easy for every one to take murmurs and low
Whispers out of the temples, and live with open vow.

To the virtuous man, the universe is the only *sanc-tum sanctorum*, and the penetralia of the temple are the broad noon of his existence. Why should he betake himself to a subterranean crypt, as if it were the only holy ground in all the world which he had left unprofaned? The obedient soul would only the more discover and familiarize things, and escape more and more into light and air, as having henceforth done with secrecy, so that the universe shall not seem open enough for it. At length, it is neglectful even of that silence which is consistent with true modesty, but by its independence of all confidence in its disclosures makes that which it imparts so private to the hearer, that it becomes the care of the whole world that modesty be not infringed.

To the man who cherishes a secret in his breast, there is a still greater secret unexplored. Our most indifferent acts may be matter for secrecy, but whatever we do with the utmost truthfulness and integrity, by virtue of its pureness, must be transparent as light.

In the third satire, he asks: —

“Est aliquid quo tendis, et in quod dirigis arcum?
An passim sequeris corvos, testave, lutove,
Securus quo pes ferat, atque ex tempore vivis?”

Is there anything to which thou tendest, and against which thou directest thy bow?

Or dost thou pursue crows, at random, with pottery or clay,
Careless whither thy feet bear thee, and live *ex tempore*?

The bad sense is always a secondary one. Language does not appear to have justice done it, but is obviously cramped and narrowed in its significance, when any meanness is described. The truest construction is not put upon it. What may readily be fashioned into a rule of wisdom is here thrown in the teeth of the sluggard, and constitutes the front of his offense. Universally, the innocent man will come forth from the sharpest inquisition and lecturing, the combined din of reproof and commendation, with a faint sound of eulogy in his ears. Our vices always lie in the direction of our virtues, and in their best estate are but plausible imitations of the latter. Falsehood never attains to the dignity of entire falseness, but is only an inferior sort of truth; if it were more thoroughly false, it would incur danger of becoming true.

“Securus quo pes ferat, atque ex tempore vivit”

is then the motto of a wise man. For first, as the subtle discernment of the language would have taught us, with all his negligence he is still secure; but the slug-gard, notwithstanding his heedlessness, is insecure.

The life of a wise man is most of all extemporaneous, for he lives out of an eternity which includes all time. The cunning mind travels further back than Zoroaster each instant, and comes quite down to the present with its revelation. The utmost thrift and industry of thinking give no man any stock in life; his credit with the inner world is no better, his capital no larger. He must try his fortune again to-day as yesterday. All questions rely on the present for their solution. Time measures nothing but itself. The word that is written may be postponed, but not that on the lip. If this is what the occasion says, let the occasion say it. All the world is forward to prompt him who gets up to live without his creed in his pocket.

In the fifth satire, which is the best, I find, —

*“Stat contra ratio, et secretam garrit in aurem,
Ne liccat facere id, quod quis vitiabit agendo.”*

Reason opposes, and whispers in the secret ear,
That it is not lawful to do that which one will spoil by doing.

Only they who do not see how anything might be better done are forward to try their hand on it. Even the master workman must be encouraged by the reflection that his awkwardness will be incompetent to do that thing harm, to which his skill may fail to do justice. Here is no apology for neglecting to do many things from a sense of our incapacity, — for what deed does

not fall maimed and imperfect from our hands? — but only a warning to bungle less.

The satires of Persius are the furthest possible from inspired, — evidently a chosen, not imposed subject. Perhaps I have given him credit for more earnestness than is apparent; but it is certain that that which alone we can call Persius, which is forever independent and consistent, *was* in earnest, and so sanctions the sober consideration of all. The artist and his work are not to be separated. The most willfully foolish man cannot stand aloof from his folly, but the deed and the doer together make ever one sober fact. There is but one stage for the peasant and the actor. The buffoon cannot bribe you to laugh always at his grimaces; they shall sculpture themselves in Egyptian granite, to stand heavy as the pyramids on the ground of his character.

Suns rose and set and found us still on the dank forest path which meanders up the Pemigewasset, now more like an otter's or a marten's trail, or where a beaver had dragged his trap, than where the wheels of travel raise a dust; where towns begin to serve as gores, only to hold the earth together. The wild pigeon sat secure above our heads, high on the dead limbs of naval pines, reduced to a robin's size. The very yards of our hostelries inclined upon the skirts of mountains, and, as we passed, we looked up at a steep angle at the stems of maples waving in the clouds.

Far up in the country, — for we would be faithful to our experience, — in Thornton, perhaps, we met a sol-

dier lad in the woods, going to muster in full regimentals, and holding the middle of the road ; deep in the forest, with shouldered musket and military step, and thoughts of war and glory all to himself. It was a sore trial to the youth, tougher than many a battle, to get by us creditably and with soldier-like bearing. Poor man! He actually shivered like a reed in his thin military pants, and by the time we had got up with him, all the sternness that becomes the soldier had forsaken his face, and he skulked past as if he were driving his father's sheep under a sword-proof helmet. It was too much for him to carry any extra armor then, who could not easily dispose of his natural arms. And for his legs, they were like heavy artillery in boggy places; better to cut the traces and forsake them. His greaves chafed and wrestled one with another for want of other foes. But he did get by and get off with all his munitions, and lived to fight another day ; and I do not record this as casting any suspicion on his honor and real bravery in the field.

Wandering on through notches which the streams had made, by the side and over the brows of hoar hills and mountains, across the stumpy, rocky, forested, and bepastured country, we at length crossed on prostrate trees over the Amonoosuck, and breathed the free air of Unappropriated Land. Thus, in fair days as well as foul, we had traced up the river to which our native stream is a tributary, until from Merrimack it became the Pemigewasset that leaped by our side, and when we had passed its fountain-head, the Wild Amonoo-suck, whose puny channel was crossed at a stride,

guiding us toward its distant source among the mountains, at length, without its guidance, we were enabled to reach the summit AGIOCOCHOOK.

“Sweet day, so cool, so calm, so bright,
The bridal of the earth and sky,
The dew shall weep thy fall to-night,
For thou must die.” — HERBERT.

When we returned to Hooksett, a week afterward, the melon man, in whose corn-barn we had hung our tent and buffaloes and other things to dry, was already picking his hops, with many women and children to help him. We bought one watermelon, the largest in his patch, to carry with us for ballast. It was Nathan's, which he might sell if he wished, having been conveyed to him in the green state, and owned daily by his eyes. After due consultation with “Father,” the bargain was concluded, — we to buy it at a venture on the vine, green or ripe, our risk, and pay “what the gentleman pleased.” It proved to be ripe; for we had had honest experience in selecting this fruit.

Finding our boat safe in its harbor, under Uncannuc Mountain, with a fair wind and the current in our favor, we commenced our return voyage at noon, sitting at our ease and conversing, or in silence watching for the last trace of each reach in the river as a bend concealed it from our view. As the season was further advanced, the wind now blew steadily from the north, and with our sail set we could occasionally lie

on our oars without loss of time. The lumbermen throwing down wood from the top of the high bank, thirty or forty feet above the water, that it might be sent downstream, paused in their work to watch our retreating sail. By this time, indeed, we were well known to the boatmen, and were hailed as the Revenue Cutter of the stream. As we sailed rapidly down the river, shut in between two mounds of earth, the sounds of this timber rolled down the bank enhanced the silence and vastness of the noon, and we fancied that only the primeval echoes were awakened. The vision of a distant scow just heaving in sight round a headland also increased by contrast the solitude.

Through the din and desultoriness of noon, even in the most Oriental city, is seen the fresh and primitive and savage nature, in which Scythians and Ethiopians and Indians dwell. What is echo, what are light and shade, day and night, ocean and stars, earthquake and eclipse, there? The works of man are everywhere swallowed up in the immensity of nature. The Ægean Sea is but Lake Huron still to the Indian. Also there is all the refinement of civilized life in the woods under a sylvan garb. The wildest scenes have an air of domesticity and homeliness even to the citizen, and when the flicker's cackle is heard in the clearing, he is reminded that civilization has wrought but little change there. Science is welcome to the deepest recesses of the forest, for there too nature obeys the same old civil laws. The little red bug on the stump of a pine, — for it the wind shifts and the sun breaks through the clouds. In the wildest nature, there is not only the

material of the most cultivated life, and a sort of anticipation of the last result, but a greater refinement already than is ever attained by man. There is papyrus by the riverside, and rushes for light, and the goose only flies overhead, ages before the studios are born or letters invented, and that literature which the former suggest, and even from the first have rudely served, it may be man does not yet use them to express. Nature is prepared to welcome into her scenery the finest work of human art, for she is herself an art so cunning that the artist never appears in his work.

Art is not tame, and Nature is not wild, in the ordinary sense. A perfect work of man's art would also be wild or natural in a good sense. Man tames Nature only that he may at last make her more free even than he found her, though he may never yet have succeeded.

With this propitious breeze, and the help of our oars, we soon reached the Falls of Amoskeag, and the mouth of the Piscataquoag, and recognized, as we swept rapidly by, many a fair bank and islet on which our eyes had rested in the upward passage. Our boat was like that which Chaucer describes in his *Dream*, in which the knight took his departure from the island, —

“To journey for his marriage,
And returne with such an host,
That wedded might be least and most. . . .
Which barge was as a man's thought,
After his pleasure to him brought,
The queene herselfe accustomed aye

In the same barge to play,
 It needeth neither mast ne rother,
 I have not heard of such another,
 No maister for the governaunce,
 Hie sayled by thought and pleasaunce,
 Without labour, east and west,
 Alle was one, calme or tempest."

So we sailed this afternoon, thinking of the saying of Pythagoras, though we had no peculiar right to remember it, "It is beautiful when prosperity is present with intellect, and when sailing as it were with a prosperous wind, actions are performed looking to virtue; just as a pilot looks to the motions of the stars." All the world reposes in beauty to him who preserves equipoise in his life, and moves serenely on his path without secret violence; as he who sails down a stream, he has only to steer, keeping his bark in the middle, and carry it round the falls. The ripples curled away in our wake, like ringlets from the head of a child, while we steadily held on our course, and under the bows we watched

"The swaying soft,
 Made by the delicate wave parted in front,
 As through the gentle element we move
 Like shadows gliding through untroubled realms."

The forms of beauty fall naturally around the path of him who is in the performance of his proper work; as the curled shavings drop from the plane, and borings cluster around the auger. Undulation is the gentlest and most ideal of motions, produced by one fluid falling on another. Rippling is a more graceful flight.

From a hill-top you may detect in it the wings of birds endlessly repeated. The two waving lines which represent the flight of birds appear to have been copied from the ripple.

The trees made an admirable fence to the landscape, skirting the horizon on every side. The single trees and the groves left standing on the interval appeared naturally disposed, though the farmer had consulted only his convenience, for he too falls into the scheme of Nature. Art can never match the luxury and superfluity of Nature. In the former all is seen; it cannot afford concealed wealth, and is niggardly in comparison; but Nature, even when she is scant and thin outwardly, satisfies us still by the assurance of a certain generosity at the roots. In swamps, where there is only here and there an evergreen tree amid the quaking moss and cranberry beds, the bareness does not suggest poverty. The single spruce, which I had hardly noticed in gardens, attracts me in such places, and now first I understand why men try to make them grow about their houses. But though there may be very perfect specimens in front-yard plots, their beauty is for the most part ineffectual there, for there is no such assurance of kindred wealth beneath and around them, to make them show to advantage. As we have said, Nature is a greater and more perfect art, the art of God; though, referred to herself, she is genius; and there is a similarity between her operations and man's art even in the details and trifles. When the overhanging pine drops into the water, by the sun and water, and the wind rubbing it against the shore, its boughs are worn into fan-

tastic shapes, and white and smooth, as if turned in a lathe. Man's art has wisely imitated those forms into which all matter is most inclined to run, as foliage and fruit. A hammock swung in a grove assumes the exact form of a canoe, broader or narrower, and higher or lower at the ends, as more or fewer persons are in it, and it rolls in the air with the motion of the body, like a canoe in the water. Our art leaves its shavings and its dust about; her art exhibits itself even in the shavings and the dust which we make. She has perfected herself by an eternity of practice. The world is well kept; no rubbish accumulates; the morning air is clear even at this day, and no dust has settled on the grass. Behold how the evening now steals over the fields, the shadows of the trees creeping farther and farther into the meadow, and ere long the stars will come to bathe in these retired waters. Her undertakings are secure and never fail. If I were awakened from a deep sleep, I should know which side of the meridian the sun might be by the aspect of nature, and by the chirp of the crickets, and yet no painter can paint this difference. The landscape contains a thousand dials which indicate the natural divisions of time, the shadows of a thousand styles point to the hour.

“Not only o'er the dial's face
This silent phantom day by day,
With slow, unseen, unceasing pace
Steals moments, months, and years away;
From hoary rock and aged tree,
From proud Palmyra's mouldering walls,
From Teneriffe, towering o'er the sea,
From every blade of grass it falls.”

It is almost the only game which the trees play at, this tit-for-tat, now this side in the sun, now that, the drama of the day. In deep ravines under the eastern sides of cliffs, Night forwardly plants her foot even at noonday, and as Day retreats she steps into his trenches, skulking from tree to tree, from fence to fence, until at last she sits in her citadel and draws out her forces into the plain. It may be that the forenoon is brighter than the afternoon, not only because of the greater transparency of its atmosphere, but because we naturally look most into the west, as forward into the day, and so in the forenoon see the sunny side of things, but in the afternoon the shadow of every tree.

The afternoon is now far advanced, and a fresh and leisurely wind is blowing over the river, making long reaches of bright ripples. The river has done its stint, and appears not to flow, but lie at its length reflecting the light, and the haze over the woods is like the inaudible panting, or rather the gentle perspiration of resting nature, rising from a myriad of pores into the attenuated atmosphere.

On the thirty-first day of March, one hundred and forty-two years before this, probably about this time in the afternoon, there were hurriedly paddling down this part of the river, between the pine woods which then fringed these banks, two white women and a boy, who had left an island at the mouth of the Contoocook before daybreak. They were slightly clad for the season, in the English fashion, and handled their paddles unskillfully, but with nervous energy and determination,

and at the bottom of their canoe lay the still bleeding scalps of ten of the aborigines. They were Hannah Dustan, and her nurse, Mary Neff, both of Haverhill, eighteen miles from the mouth of this river, and an English boy, named Samuel Lennardson, escaping from captivity among the Indians. On the 15th of March previous, Hannah Dustan had been compelled to rise from childbed, and half dressed, with one foot bare, accompanied by her nurse, commence an uncertain march, in still inclement weather, through the snow and the wilderness. She had seen her seven elder children flee with their father, but knew not of their fate. She had seen her infant's brains dashed out against an apple tree, and had left her own and her neighbors' dwellings in ashes. When she reached the wigwam of her captor, situated on an island in the Merrimack, more than twenty miles above where we now are, she had been told that she and her nurse were soon to be taken to a distant Indian settlement, and there made to run the gauntlet naked. The family of this Indian consisted of two men, three women, and seven children, besides an English boy, whom she found a prisoner among them. Having determined to attempt her escape, she instructed the boy to inquire of one of the men, how he should dispatch an enemy in the quickest manner, and take his scalp. "Strike 'em there," said he, placing his finger on his temple, and he also showed him how to take off the scalp. On the morning of the 31st she arose before daybreak, and awoke her nurse and the boy, and taking the Indians' tomahawks, they killed them all in their sleep, excepting one favorite boy, and one squaw who

fled wounded with him to the woods. The English boy struck the Indian who had given him the information, on the temple, as he had been directed. They then collected all the provision they could find, and took their master's tomahawk and gun, and scuttling all the canoes but one, commenced their flight to Haverhill, distant about sixty miles by the river. But after having proceeded a short distance, fearing that her story would not be believed if she should escape to tell it, they returned to the silent wigwam, and taking off the scalps of the dead, put them into a bag as proofs of what they had done, and then, retracing their steps to the shore in the twilight, recommenced their voyage.

Early this morning this deed was performed, and now, perchance, these tired women and this boy, their clothes stained with blood, and their minds racked with alternate resolution and fear, are making a hasty meal of parched corn and moose-meat, while their canoe glides under these pine roots whose stumps are still standing on the bank. They are thinking of the dead whom they have left behind on that solitary isle far up the stream, and of the relentless living warriors who are in pursuit. Every withered leaf which the winter has left seems to know their story, and in its rustling to repeat it and betray them. An Indian lurks behind every rock and pine, and their nerves cannot bear the tapping of a woodpecker. Or they forget their own dangers and their deeds in conjecturing the fate of their kindred, and whether, if they escape the Indians, they shall find the former still alive. They do not stop to cook their meals upon the bank, nor land, except to

carry their canoe about the falls. The stolen birch forgets its master and does them good service, and the swollen current bears them swiftly along with little need of the paddle, except to steer and keep them warm by exercise. For ice is floating in the river; the spring is opening; the muskrat and the beaver are driven out of their holes by the flood; deer gaze at them from the bank; a few faint-singing forest birds, perchance, fly across the river to the northernmost shore; the fishhawk sails and screams overhead, and geese fly over with a startling clangor; but they do not observe these things, or they speedily forget them. They do not smile or chat all day. Sometimes they pass an Indian grave surrounded by its paling on the bank, or the frame of a wigwam, with a few coals left behind, or the withered stalks still rustling in the Indian's solitary corn-field on the interval. The birch stripped of its bark, or the charred stump where a tree has been burned down to be made into a canoe, — these are the only traces of man, a fabulous wild man to us. On either side, the primeval forest stretches away uninterrupted to Canada, or to the "South Sea;" to the white man a drear and howling wilderness, but to the Indian a home, adapted to his nature, and cheerful as the smile of the Great Spirit.

While we loiter here this autumn evening, looking for a spot retired enough, where we shall quietly rest to-night, they thus, in that chilly March evening, one hundred and forty-two years before us, with wind and current favoring, have already glided out of sight, not to camp, as we shall, at night, but while two sleep,

one will manage the canoe, and the swift stream bear them onward to the settlements, it may be, even to old John Lovewell's house on Salmon Brook to-night.

According to the historian, they escaped as by a miracle all roving bands of Indians, and reached their homes in safety, with their trophies, for which the General Court paid them fifty pounds. The family of Hannah Dustan all assembled alive once more, except the infant whose brains were dashed out against the apple tree, and there have been many who in later time have lived to say that they have eaten of the fruit of that apple tree.

This seems a long while ago, and yet it happened since Milton wrote his *Paradise Lost*. But its antiquity is not the less great for that, for we do not regulate our historical time by the English standard, nor did the English by the Roman, nor the Roman by the Greek. "We must look a long way back," says Raleigh, "to find the Romans giving laws to nations, and their consuls bringing kings and princes bound in chains to Rome in triumph ; to see men go to Greece for wisdom, or Ophir for gold ; when now nothing remains but a poor paper remembrance of their former condition." And yet, in one sense, not so far back as to find the Penacooks and Pawtuckets using bows and arrows and hatchets of stone, on the banks of the Merrimack. From this September afternoon, and from between these now cultivated shores, those times seemed more remote than the dark ages. On beholding an old picture of Concord, as it appeared but seventy-five

years ago, with a fair open prospect and a light on trees and river, as if it were broad noon, I find that I had not thought the sun shone in those days, or that men lived in broad daylight then. Still less do we imagine the sun shining on hill and valley during Philip's war, on the war-path of Church or Philip, or later of Lovewell or Paugus, with serene summer weather, but they must have lived and fought in a dim twilight or night.

The age of the world is great enough for our imaginations, even according to the Mosaic account, without borrowing any years from the geologist. From Adam and Eve at one leap sheer down to the deluge, and then through the ancient monarchies, through Babylon and Thebes, Brahma and Abraham, to Greece and the Argonauts ; whence we might start again with Orpheus, and the Trojan war, the Pyramids and the Olympic games, and Homer and Athens, for our stages ; and after a breathing space at the building of Rome, continue our journey down through Odin and Christ to — America. It is a wearisome while. And yet the lives of but sixty old women, such as live under the hill, say of a century each, strung together, are sufficient to reach over the whole ground. Taking hold of hands they would span the interval from Eve to my own mother. A respectable tea-party merely, — whose gossip would be Universal History. The fourth old woman from myself suckled Columbus, — the ninth was nurse to the Norman Conqueror, — the nineteenth was the Virgin Mary, — the twenty-fourth the Cumæan Sibyl, — the thirtieth was at the Trojan war and Helen her name, — the

thirty-eighth was Queen Semiramis, — the sixtieth was Eve, the mother of mankind. So much for the

“Old woman that lives under the hill,
And if she’s not gone she lives there still.”

It will not take a very great-granddaughter of hers to be in at the death of Time.

We can never safely exceed the actual facts in our narratives. Of pure invention, such as some suppose, there is no instance. To write a true work of fiction even is only to take leisure and liberty to describe some things more exactly as they are. A true account of the actual is the rarest poetry, for common sense always takes a hasty and superficial view. Though I am not much acquainted with the works of Goethe, I should say that it was one of his chief excellences as a writer, that he was satisfied with giving an exact description of things as they appeared to him, and their effect upon him. Most travelers have not self-respect enough to do this simply, and make objects and events stand around them as the centre, but still imagine more favorable positions and relations than the actual ones, and so we get no valuable report from them at all. In his “Italian Travels” Goethe jogs along at a snail’s pace, but always mindful that the earth is beneath and the heavens are above him. His Italy is not merely the fatherland of lazzaroni and virtuosi, and scene of splendid ruins, but a solid turf-clad soil, daily shined on by the sun, and nightly by the moon. Even the few showers are faithfully recorded. He speaks as an unconcerned spectator, whose object is faithfully to

describe what he sees, and that, for the most part, in the order in which he sees it. Even his reflections do not interfere with his descriptions. In one place he speaks of himself as giving so glowing and truthful a description of an old tower to the peasants who had gathered around him, that they who had been born and brought up in the neighborhood must needs look over their shoulders, "that," to use his own words, "they might behold with their eyes, what I had praised to their ears," — "and I had added nothing, not even the ivy which for centuries had decorated the walls." It would thus be possible for inferior minds to produce invaluable books, if this very moderation were not the evidence of superiority; for the wise are not so much wiser than others as respecters of their own wisdom. Some, poor in spirit, record plaintively only what has happened to them; but others how they have happened to the universe, and the judgment which they have awarded to circumstances. Above all, he possessed a hearty good-will to all men, and never wrote a cross or even careless word. On one occasion the post-boy sniveling, "Signor, perdonate, questa è la mia patria," he confesses that "to me poor northerner came something tear-like into the eyes."

Goethe's whole education and life were those of the artist. He lacks the unconsciousness of the poet. In his autobiography he describes accurately the life of the author of *Wilhelm Meister*. For as there is in that book, mingled with a rare and serene wisdom, a certain pettiness or exaggeration of trifles, wisdom applied to produce a constrained and partial and merely well-bred

man,—a magnifying of the theatre till life itself is turned into a stage, for which it is our duty to study our parts well, and conduct with propriety and precision,—so in the autobiography, the fault of his education is, so to speak, its merely artistic completeness. Nature is hindered, though she prevails at last in making an unusually catholic impression on the boy. It is the life of a city boy, whose toys are pictures and works of art, whose wonders are the theatre and kingly processions and crownings. As the youth studied minutely the order and the degrees in the imperial procession, and suffered none of its effect to be lost on him, so the man aimed to secure a rank in society which would satisfy his notion of fitness and respectability. He was defrauded of much which the savage boy enjoys. Indeed, he himself has occasion to say in this very autobiography, when at last he escapes into the woods without the gates: “Thus much is certain, that only the undefinable, wide-expanding feelings of youth and of uncultivated nations are adapted to the sublime, which, whenever it may be excited in us through external objects, since it is either formless, or else moulded into forms which are incomprehensible, must surround us with a grandeur which we find above our reach.” He further says of himself: “I had lived among painters from my childhood, and had accustomed myself to look at objects, as they did, with reference to art.” And this was his practice to the last. He was even too *well-bred* to be thoroughly bred. He says that he had had no intercourse with the lowest class of his townsb-boys. The child should have the advantage of igno-

rance as well as of knowledge, and is fortunate if he gets his share of neglect and exposure.

“The laws of Nature break the rules of Art.”

The Man of Genius may at the same time be, indeed is commonly, an Artist, but the two are not to be confounded. The Man of Genius, referred to mankind, is an originator, an inspired or demonic man, who produces a perfect work in obedience to laws yet unexplored. The artist is he who detects and applies the law from observation of the works of Genius, whether of man or nature. The Artisan is he who merely applies the rules which others have detected. There has been no man of pure Genius, as there has been none wholly destitute of Genius.

Poetry is the mysticism of mankind.

The expressions of the poet cannot be analyzed; his sentence is one word, whose syllables are words. There are indeed no *words* quite worthy to be set to his music. But what matter if we do not hear the words always, if we hear the music?

Much verse fails of being poetry because it was not written exactly at the right crisis, though it may have been inconceivably near to it. It is only by a miracle that poetry is written at all. It is not recoverable thought, but a hue caught from a vaster receding thought.

A poem is one undivided, unimpeded expression fallen ripe into literature, and it is undividedly and unimpededly received by those for whom it was matured.

If you can speak what you will never hear, if you can write what you will never read, you have done rare things.

The work we choose should be our own
God lets alone.

The unconsciousness of man is the consciousness of God.

Deep are the foundations of sincerity. Even stone walls have their foundation below the frost.

What is produced by a free stroke charms us, like the forms of lichens and leaves. There is a certain perfection in accident which we never consciously attain. Draw a blunt quill filled with ink over a sheet of paper, and fold the paper before the ink is dry, transversely to this line, and a delicately shaded and regular figure will be produced, in some respects more pleasing than an elaborate drawing.

The talent of composition is very dangerous, — the striking out the heart of life at a blow, as the Indian takes off a scalp. I feel as if my life had grown more outward when I can express it.

On his journey from Brenner to Verona, Goethe writes: "The Tees flows now more gently, and makes in many places broad sands. On the land, near to the water, upon the hillsides, everything is so closely planted one to another, that you think they must choke one another, — vineyards, maize, mulberry-trees, apples, pears, quinces, and nuts. The dwarf elder throws itself vigorously over the walls. Ivy grows with strong stems up the rocks, and spreads itself wide over them,

the lizard glides through the intervals, and everything that wanders to and fro reminds one of the loveliest pictures of art. The women's tufts of hair bound up, the men's bare breasts and light jackets, the excellent oxen which they drive home from market, the little asses with their loads, — everything forms a living animated Heinrich Roos. And now that it is evening, in the mild air a few clouds rest upon the mountains, in the heavens more stand still than move, and immediately after sunset the chirping of crickets begins to grow more loud; then one feels for once at home in the world, and not as concealed or in exile. I am contented as though I had been born and brought up here, and were now returning from a Greenland or whaling voyage. Even the dust of my Fatherland, which is often whirled about the wagon, and which for so long a time I had not seen, is greeted. The clock-and-bell jingling of the crickets is altogether lovely, penetrating, and agreeable. It sounds bravely when roguish boys whistle in emulation of a field of such songstresses. One fancies that they really enhance one another. Also the evening is perfectly mild as the day.

“If one who dwelt in the south, and came hither from the south, should hear of my rapture hereupon, he would deem me very childish. Alas! what I here express I have long known while I suffered under an unpropitious heaven, and now may I joyful feel this joy as an exception, which we should enjoy everforth as an eternal necessity of our nature.”

Thus we “sailed by thought and pleasure,” as

Chaucer says, and all things seemed with us to flow ; the shore itself and the distant cliffs were dissolved by the undiluted air. The hardest material seemed to obey the same law with the most fluid, and so indeed in the long run it does. Trees were but rivers of sap and woody fibre, flowing from the atmosphere, and emptying into the earth by their trunks, as their roots flowed upward to the surface. And in the heavens there were rivers of stars, and milky ways, already beginning to gleam and ripple over our heads. There were rivers of rock on the surface of the earth, and rivers of ore in its bowels, and our thoughts flowed and circulated, and this portion of time was but the current hour. Let us wander where we will, the universe is built round about us, and we are central still. If we look into the heavens they are concave, and if we were to look into a gulf as bottomless, it would be concave also. The sky is curved downward to the earth in the horizon, because we stand on the plain. I draw down its skirts. The stars so low there seem loath to depart, but by a circuitous path to be remembering me, and returning on their steps.

We had already passed by broad daylight the scene of our encampment at Coos Falls, and at length we pitched our camp on the west bank, in the northern part of Merrimack, nearly opposite to the large island on which we had spent the noon in our way up the river.

There we went to bed that summer evening, on a sloping shelf in the bank, a couple of rods from our boat, which was drawn up on the sand, and just behind a thin fringe of oaks which bordered the river ; with-

out having disturbed any inhabitants but the spiders in the grass, which came out by the light of our lamp, and crawled over our buffaloes. When we looked out from under the tent, the trees were seen dimly through the mist, and a cool dew hung upon the grass, which seemed to rejoice in the night, and with the damp air we inhaled a solid fragrance. Having eaten our supper of hot cocoa and bread and watermelon, we soon grew weary of conversing, and writing in our journals, and putting out the lantern which hung from the tentpole, fell asleep.

Unfortunately, many things have been omitted which should have been recorded in our journal ; for though we made it a rule to set down all our experiences therein, yet such a resolution is very hard to keep, for the important experience rarely allows us to remember such obligations, and so indifferent things get recorded, while that is frequently neglected. It is not easy to write in a journal what interests us at any time, because to write it is not what interests us.

Whenever we awoke in the night, still eking out our dreams with half-awakened thoughts, it was not till after an interval, when the wind breathed harder than usual, flapping the curtains of the tent, and causing its cords to vibrate, that we remembered that we lay on the bank of the Merrimack, and not in our chamber at home. With our heads so low in the grass, we heard the river whirling and sucking, and lapsing downward, kissing the shore as it went, sometimes rippling louder than usual, and again its mighty current making only a slight limpid, trickling sound, as if our water-pail had sprung a leak, and the water were flowing into the

grass by our side. The wind, rustling the oaks and hazels, impressed us like a wakeful and inconsiderate person up at midnight, moving about, and putting things to rights, occasionally stirring up whole drawers full of leaves at a puff. There seemed to be a great haste and preparation throughout Nature, as for a distinguished visitor ; all her aisles had to be swept in the night by a thousand handmaidens, and a thousand pots to be boiled for the next day's feasting, — such a whispering bustle, as if ten thousand fairies made their fingers fly, silently sewing at the new carpet with which the earth was to be clothed, and the new drapery which was to adorn the trees. And then the wind would lull and die away, and we like it fell asleep again.

FRIDAY

The Boteman strayt

Held on his course with stayed stedfastnesse,
Ne ever shroncke, ne ever sought to bayt
His tryed armes for toylesome wearinesse;
But with his oares did sweepe the watry wildernessse.

SPENSER.

Summer's robe grows

Dusky, and like an oft-dyed garment shows. — DONNE.

As we lay awake long before daybreak, listening to the rippling of the river and the rustling of the leaves, in suspense whether the wind blew up or down the stream, was favorable or unfavorable to our voyage, we already suspected that there was a change in the weather, from a freshness as of autumn in these sounds. The wind in the woods sounded like an incessant waterfall dashing and roaring amid rocks, and we even felt encouraged by the unusual activity of the element. He who hears the rippling of rivers in these degenerate days will not utterly despair. That night was the turning-point in the season. We had gone to bed in summer, and we awoke in autumn ; for summer passes into autumn in some unimaginable point of time, like the turning of a leaf.

We found our boat in the dawn just as we had left it, and as if waiting for us, there on the shore, in autumn, all cool and dripping with dew, and our tracks still fresh in the wet sand around it, the fairies all gone or concealed. Before five o'clock we pushed it into the

fog, and, leaping in, at one shove were out of sight of the shores, and began to sweep downward with the rushing river, keeping a sharp lookout for rocks. We could see only the yellow gurgling water, and a solid bank of fog on every side, forming a small yard around us. We soon passed the mouth of the Souhegan, and the village of Merrimack, and as the mist gradually rolled away, and we were relieved from the trouble of watching for rocks, we saw by the flitting clouds, by the first russet tinge on the hills, by the rushing river, the cottages on shore, and the shore itself, so coolly fresh and shining with dew, and later in the day, by the hue of the grape-vine, the goldfinch on the willow, the flickers flying in flocks, and when we passed near enough to the shore, as we fancied, by the faces of men, that the fall had commenced. The cottages looked more snug and comfortable, and their inhabitants were seen only for a moment, and then went quietly in and shut the door, retreating inward to the haunts of summer.

“And now the cold autumnal dews are seen
To cobweb ev’ry green;
And by the low-shorn rowens doth appear
The fast-declining year.”

We heard the sigh of the first autumnal wind, and even the water had acquired a grayer hue. The sumach, grape, and maple were already changed, and the milkweed had turned to a deep, rich yellow. In all woods the leaves were fast ripening for their fall ; for their full veins and lively gloss mark the ripe leaf and not the sered one of the poets; and we knew that the

maples, stripped of their leaves among the earliest, would soon stand like a wreath of smoke along the edge of the meadow. Already the cattle were heard to low wildly in the pastures and along the highways, restlessly running to and fro, as if in apprehension of the withering of the grass and of the approach of winter. Our thoughts, too, began to rustle.

As I pass along the streets of our village of Concord on the day of our annual Cattle-Show, when it usually happens that the leaves of the elms and buttonwoods begin first to strew the ground under the breath of the October wind, the lively spirits in their sap seem to mount as high as any plow-boy's let loose that day; and they lead my thoughts away to the rustling woods, where the trees are preparing for their winter campaign. This autumnal festival, when men are gathered in crowds in the streets as regularly and by as natural a law as the leaves cluster and rustle by the wayside, is naturally associated in my mind with the fall of the year. The low of cattle in the streets sounds like a hoarse symphony or running bass to the rustling of the leaves. The wind goes hurrying down the country, gleaning every loose straw that is left in the fields, while every farmer lad too appears to scud before it,—having donned his best pea-jacket and pepper-and-salt waistcoat, his unbent trousers, outstanding rigging of duck or kerseymere or corduroy, and his furry hat withal,—to country fairs and cattle-shows, to that Rome among the villages where the treasures of the year are gathered. All the land over they go leaping the fences with their tough, idle palms, which have

never learned to hang by their sides, amid the low of calves and the bleating of sheep, — Amos, Abner, El-nathan, Elbridge, —

“From steep pine-bearing mountains to the plain.”

I love these sons of earth, every mother's son of them, with their great hearty hearts rushing tumultuously in herds from spectacle to spectacle, as if fearful lest there should not be time between sun and sun to see them all, and the sun does not wait more than in haying-time.

“Wise Nature's darlings, they live in the world
Perplexing not themselves how it is hurled.”

Running hither and thither with appetite for the coarse pastimes of the day, now with boisterous speed at the heels of the inspired negro from whose larynx the melodies of all Congo and Guinea Coast have broke loose into our streets ; now to see the procession of a hundred yoke of oxen, all as august and grave as Osiris, or the droves of neat cattle and milch cows as unspotted as Isis or Io. Such as had no love for Nature

“at all,

Came lovers home from this great festival.”

They may bring their fattest cattle and richest fruits to the fair, but they are all eclipsed by the show of men. These are stirring autumn days, when men sweep by in crowds, amid the rustle of leaves like migrating finches; this is the true harvest of the year, when the air is but the breath of men, and the rustling of leaves is as the trampling of the crowd. We read nowadays of the ancient festivals, games, and processions of the Greeks

and Etruscans with a little incredulity, or at least with little sympathy; but how natural and irrepressible in every people is some hearty and palpable greeting of Nature! The Corybantes, the Bacchantes, the rude primitive tragedians with their procession and goat-song, and the whole paraphernalia of the Panathenæa, which appear so antiquated and peculiar, have their parallel now. The husbandman is always a better Greek than the scholar is prepared to appreciate, and the old custom still survives, while antiquarians and scholars grow gray in commemorating it. The farmers crowd to the fair to-day in obedience to the same ancient law, which Solon or Lycurgus did not enact, as naturally as bees swarm and follow their queen.

It is worth the while to see the country's people, how they pour into the town, the sober farmer folk, now all agog, their very shirt and coat collars pointing forward, — collars so broad as if they had put their shirts on wrong end upward, for the fashions always tend to superfluity, — and with an unusual springiness in their gait, jabbering earnestly to one another. The more supple vagabond, too, is sure to appear on the least rumor of such a gathering, and the next day to disappear, and go into his hole like the seventeen-year locust, in an ever-shabby coat, though finer than the farmer's best, yet never dressed; come to see the sport, and have a hand in what is going, — to know "what's the row," if there is any; to be where some men are drunk, some horses race, some cockerels fight; anxious to be shaking props under a table and above all to see the "striped pig." He especially is the creature of the oc-

casian. He empties both his pockets and his character into the stream, and swims in such a day. He dearly loves the social slush. There is no reserve of soberness in him.

I love to see the herd of men feeding heartily on coarse and succulent pleasures, as cattle on the husks and stalks of vegetables. Though there are many crooked and crabbed specimens of humanity among them, run all to thorn and rind, and crowded out of shape by adverse circumstances, like the third chestnut in the bur, so that you wonder to see some heads wear a whole hat, yet fear not that the race will fail or waver in them; like the crabs which grow in hedges, they furnish the stocks of sweet and thrifty fruits still. Thus is nature recruited from age to age, while the fair and palatable varieties die out, and have their period. This is that mankind. How cheap must be the material of which so many men are made!

The wind blew steadily down the stream, so that we kept our sails set, and lost not a moment of the forenoon by delays, but from early morning until noon were continually dropping downward. With our hands on the steering-paddle, which was thrust deep into the river, or bending to the oar, which indeed we rarely relinquished, we felt each palpitation in the veins of our steed, and each impulse of the wings which drew us above. The current of our thoughts made as sudden bends as the river, which was continually opening new prospects to the east or south, but we are aware that rivers flow most rapidly and shallowest at these points.

The steadfast shores never once turned aside for us, but still trended as they were made; why then should we always turn aside for them?

A man cannot wheedle nor overawe his Genius. It requires to be conciliated by nobler conduct than the world demands or can appreciate. These winged thoughts are like birds, and will not be handled; even hens will not let you touch them like quadrupeds. Nothing was ever so unfamiliar and startling to a man as his own thoughts.

To the rarest genius it is the most expensive to succumb and conform to the ways of the world. Genius is the worst of lumber, if the poet would float upon the breeze of popularity. The bird of paradise is obliged constantly to fly against the wind, lest its gay trappings, pressing close to its body, impede its free movements.

He is the best sailor who can steer within the fewest points of the wind, and extract a motive power out of the greatest obstacles. Most begin to veer and tack as soon as the wind changes from aft, and as within the tropics it does not blow from all points of the compass, there are some harbors which they can never reach.

The poet is no tender slip of fairy stock, who requires peculiar institutions and edicts for his defense, but the toughest son of earth and of Heaven, and by his greater strength and endurance his fainting companions will recognize the God in him. It is the worshipers of beauty, after all, who have done the real pioneer work of the world.

The poet will prevail to be popular in spite of his faults, and in spite of his beauties too. He will hit the

nail on the head, and we shall not know the shape of his hammer. He makes us free of his hearth and heart, which is greater than to offer one the freedom of a city.

Great men, unknown to their generation, have their fame among the great who have preceded them, and all true worldly fame subsides from their high estimate beyond the stars.

Orpheus does not hear the strains which issue from his lyre, but only those which are breathed into it; for the original strain precedes the sound, by as much as the echo follows after. The rest is the perquisite of the rocks and trees and beasts.

When I stand in a library where is all the recorded wit of the world, but none of the recording, a mere accumulated, and not truly cumulative treasure; where immortal works stand side by side with anthologies which did not survive their month, and cobweb and mildew have already spread from these to the binding of those; and happily I am reminded of what poetry is, — I perceive that Shakespeare and Milton did not foresee into what company they were to fall. Alas! that so soon the work of a true poet should be swept into such a dust-hole!

The poet will write for his peers alone. He will remember only that he saw truth and beauty from his position, and expect the time when a vision as broad shall overlook the same field as freely.

We are often prompted to speak our thoughts to our neighbors, or the single travelers whom we meet on the road, but poetry is a communication from our home and solitude addressed to all Intelligence. It never

whispers in a private ear. Knowing this we may understand those sonnets said to be addressed to particular persons, or "To a Mistress's Eyebrow." Let none feel flattered by them. For poetry write love, and it will be equally true.

No doubt it is an important difference between men of genius or poets, and men not of genius, that the latter are unable to grasp and confront the thought which visits them. But it is because it is too faint for expression, or even conscious impression. What merely quickens or retards the blood in their veins and fills their afternoons with pleasure, they know not whence, conveys a distinct assurance to the finer organization of the poet.

We talk of genius as if it were a mere knack, and the poet could only express what other men conceived. But in comparison with his task, the poet is the least talented of any; the writer of prose has more skill. See what talent the smith has. His material is pliant in his hands. When the poet is most inspired, is stimulated by an *aura* which never even colors the afternoons of common men, then his talent is all gone, and he is no longer a poet. The gods do not grant him any skill more than another. They never put their gifts into his hands, but they encompass and sustain him with their breath.

To say that God has given a man many and great talents frequently means that he has brought his heavens down within reach of his hands.

When the poetic frenzy seizes us, we run and scratch with our pen, intent only on worms, calling our mates

around us, like the cock, and delighting in the dust we make, but do not detect where the jewel lies, which, perhaps, we have in the mean time cast to a distance, or quite covered up again.

The poet's body even is not fed like other men's, but he sometimes tastes the genuine nectar and ambrosia of the gods, and lives a divine life. By the healthful and invigorating thrills of inspiration his life is preserved to a serene old age.

Some poems are for holidays only. They are polished and sweet, but it is the sweetness of sugar, and not such as toil gives to sour bread. The breath with which the poet utters his verse must be that by which he lives.

Great prose, of equal elevation, commands our respect more than great verse, since it implies a more permanent and level height, a life more pervaded with the grandeur of the thought. The poet often only makes an irruption, like a Parthian, and is off again, shooting while he retreats; but the prose writer has conquered like a Roman, and settled colonies.

The true poem is not that which the public read. There is always a poem not printed on paper, coincident with the production of this, stereotyped in the poet's life. It is *what he has become through his work*. Not how is the idea expressed in stone, or on canvas or paper, is the question, but how far it has obtained form and expression in the life of the artist. His true work will not stand in any prince's gallery.

My life has been the poem I would have writ,
But I could not both live and utter it.

THE POET'S DELAY

In vain I see the morning rise,
In vain observe the western blaze,
Who idly look to other skies,
Expecting life by other ways.

Amidst such boundless wealth without,
I only still am poor within,
The birds have sung their summer out,
But still my spring does not begin.

Shall I then wait the autumn wind,
Compelled to seek a milder day,
And leave no curious nest behind,
No woods still echoing to my lay?

This raw and gusty day, and the creaking of the oaks and pines on shore, reminded us of more northern climes than Greece, and more wintry seas than the Ægean.

The genuine remains of Ossian, or those ancient poems which bear his name, though of less fame and extent, are, in many respects, of the same stamp with the Iliad itself. He asserts the dignity of the bard no less than Homer, and in his era, we hear of no other priest than he. It will not avail to call him a heathen, because he personifies the sun and addresses it; and what if his heroes did "worship the ghosts of their fathers," their thin, airy, and unsubstantial forms? we worship but the ghosts of our fathers in more substantial form. We cannot but respect the vigorous faith of those heathen, who sternly believed somewhat, and are inclined to say to the critics, who are offended by their superstitious rites, Don't interrupt these men's prayers.

As if we knew more about human life and a God, than the heathen and ancients! Does English theology contain the recent discoveries?

Ossian reminds us of the most refined and rudest eras, of Homer, Pindar, Isaiah, and the American Indian. In his poetry, as in Homer's, only the simplest and most enduring features of humanity are seen, such essential parts of a man as Stonehenge exhibits of a temple; we see the circles of stone, and the upright shaft alone. The phenomena of life acquire almost an unreal and gigantic size seen through his mists. Like all older and grander poetry, it is distinguished by the few elements in the lives of its heroes. They stand on the heath, between the stars and the earth, shrunk to the bones and sinews. The earth is a boundless plain for their deeds. They lead such a simple, dry, and everlasting life, as hardly needs depart with the flesh, but is transmitted entire from age to age. There are but few objects to distract their sight, and their life is as unincumbered as the course of the stars they gaze at.

“The wrathful kings, on cairns apart,
Look forward from behind their shields,
And mark the wandering stars,
That brilliant westward move.”

It does not cost much for these heroes to live; they do not want much furniture. They are such forms of men only as can be seen afar through the mist, and have no costume nor dialect, but for language there is the tongue itself, and for costume there are always the skins of beasts and the bark of trees to be had. They live out their years by the vigor of their constitutions. They

survive storms and the spears of their foes, and perform a few heroic deeds, and then

“Mounds will answer questions of them,
For many future years.”

Blind and infirm, they spend the remnant of their days listening to the lays of the bards, and feeling the weapons which laid their enemies low, and when at length they die, by a convulsion of nature, the bard allows us a short and misty glance into futurity, yet as clear perchance as their lives had been. When MacRoine was slain, —

“His soul departed to his warlike sires,
To follow misty forms of boars,
In tempestuous islands bleak.”

The hero's cairn is erected, and the bard sings a brief significant strain, which will suffice for epitaph and biography.

“The weak will find his bow in the dwelling,
The feeble will attempt to bend it.”

Compared with this simple, fibrous life, our civilized history appears the chronicle of debility, of fashion, and the arts of luxury. But the civilized man misses no real refinement in the poetry of the rudest era. It reminds him that civilization does but dress men. It makes shoes, but it does not toughen the soles of the feet. It makes cloth of finer texture, but it does not touch the skin. Inside the civilized man stands the savage still in the place of honor. We are those blue-eyed, yellow-haired Saxons, those slender, dark-haired Normans.

The profession of the bard attracted more respect in those days from the importance attached to fame. It was his province to record the deeds of heroes. When Ossian hears the traditions of inferior bards, he exclaims, —

“I straightway seize the unfruitful tales,
And send them down in faithful verse.”

His philosophy of life is expressed in the opening of the third Duan of Ca-Lodin.

“Whence have sprung the things that are?
And whither roll the passing years?
Where does Time conceal its two heads,
In dense impenetrable gloom,
Its surface marked with heroes’ deeds alone?
I view the generations gone;
The past appears but dim;
As objects by the moon’s faint beams,
Reflected from a distant lake.
I see, indeed, the thunderbolts of war,
But there the unmighty joyless dwell,
All those who send not down their deeds
To far, succeeding times.”

The ignoble warriors die and are forgotten:—

“Strangers come to build a tower,
And throw their ashes overhand;
Some rusted swords appear in dust,
One, bending forward, says,
‘The arms belonged to heroes gone;
We never heard their praise in song.’”

The grandeur of the similes is another feature which characterizes great poetry. Ossian seems to speak a gigantic and universal language. The images and pictures occupy even much space in the landscape, as if

they could be seen only from the sides of mountains, and plains with a wide horizon, or across arms of the sea. The machinery is so massive that it cannot be less than natural. Oivana says to the spirit of her father, "Gray-haired Torkil of Torne," seen in the skies, —

"Thou glidest away like receding ships."

So when the hosts of Fingal and Starne approach to battle, —

"With murmurs loud, like rivers far,
The race of Torne hither moved."

And when compelled to retire, —

"dragging his spear behind,
Cudulin sank in the distant wood,
Like a fire upblazing ere it dies."

Nor did Fingal want a proper audience when he spoke:

"A thousand orators inclined
To hear the lay of Fingal."

The threats too would have deterred a man. Vengeance and terror were real. Trenmore threatens the young warrior whom he meets on a foreign strand, —

"Thy mother shall find thee pale on the shore,
While lessening on the waves she spies
The sails of him who slew her son."

If Ossian's heroes weep, it is from excess of strength, and not from weakness, a sacrifice or libation of fertile natures, like the perspiration of stone in summer's heat. We hardly know that tears have been shed, and it seems as if weeping were proper only for babes and

heroes. Their joy and their sorrow are made of one stuff, like rain and snow, the rainbow and the mist. When Fillan was worsted in fight, and ashamed in the presence of Fingal, —

“He strode away forthwith,
And bent in grief above a stream,
His cheeks bedewed with tears,
From time to time the thistles gray
He lopped with his inverted lance.”

Crodar, blind and old, receives Ossian, son of Fingal, who comes to aid him in war: —

“‘My eyes have failed,’ says he, ‘Crodar is blind,
Is thy strength like that of thy fathers?
Stretch, Ossian, thine arm to the hoary-haired.’

I gave my arm to the king.
The aged hero seized my hand;
He heaved a heavy sigh;
Tears flowed incessant down his cheek.
‘Strong art thou, son of the mighty,
Though not so dreadful as Morven’s prince.

.
Let my feast be spread in the hall,
Let every sweet-voiced minstrel sing;
Great is he who is within my walls,
Sons of wave-echoing Croma.”

Even Ossian himself, the hero-bard, pays tribute to the superior strength of his father Fingal.

“How beauteous, mighty man, was thy mind,
Why succeeded Ossian without its strength?”

While we sailed fleetly before the wind, with the river gurgling under our stern, the thoughts of autumn

coursed as steadily through our minds, and we observed less what was passing on the shore than the dateless associations and impressions which the season awakened, anticipating in some measure the progress of the year.

I hearing get, who had but ears,
And sight, who had but eyes before,
I moments live, who lived but years,
And truth discern, who knew but learning's lore.

Sitting with our faces now up-stream, we studied the landscape by degrees, as one unrolls a map,—rock, tree, house, hill, and meadow assuming new and varying positions as wind and water shifted the scene, and there was variety enough for our entertainment in the metamorphoses of the simplest objects. Viewed from this side the scenery appeared new to us.

The most familiar sheet of water, viewed from a new hilltop, yields a novel and unexpected pleasure. When we have traveled a few miles, we do not recognize the profiles even of the hills which overlook our native village, and perhaps no man is quite familiar with the horizon as seen from the hill nearest to his house, and can recall its outline distinctly when in the valley. We do not commonly know, beyond a short distance, which way the hills range which take in our houses and farms in their sweep. As if our birth had at first sundered things, and we had been thrust up through into nature like a wedge, and not till the wound heals and the scar disappears do we begin to discover where we are, and that nature is one and continuous everywhere. It is an important epoch when a

man who has always lived on the east side of a mountain, and seen it in the west, travels round and sees it in the east. Yet the universe is a sphere whose centre is wherever there is intelligence. The sun is not so central as a man. Upon an isolated hilltop, in an open country, we seem to ourselves to be standing on the boss of an immense shield, the immediate landscape being apparently depressed below the more remote, and rising gradually to the horizon, which is the rim of the shield, — villas, steeples, forests, mountains, one above another, till they are swallowed up in the heavens. The most distant mountains in the horizon appear to rise directly from the shore of that lake in the woods by which we chance to be standing, while from the mountain-top, not only this, but a thousand nearer and larger lakes are equally unobserved.

Seen through this clear atmosphere, the works of the farmer, his plowing and reaping, had a beauty to our eyes which he never saw. How fortunate were we who did not own an acre of these shores, who had not renounced our title to the whole! One who knew how to appropriate the true value of this world would be the poorest man in it. The poor rich man! all he has is what he has bought. What I see is mine. I am a large owner in the Merrimack intervals.

Men dig and dive but cannot my wealth spend,
Who yet no partial store appropriate,
Who no armed ship into the Indies send,
To rob me of my orient estate.

He is the rich man, and enjoys the fruits of riches,
who summer and winter forever can find delight in his

own thoughts. Buy a farm! What have I to pay for a farm which a farmer will take?

When I visit again some haunt of my youth, I am glad to find that nature wears so well. The landscape is indeed something real, and solid, and sincere, and I have not put my foot through it yet. There is a pleasant tract on the bank of the Concord, called Conantum, which I have in my mind, — the old deserted farmhouse, the desolate pasture with its bleak cliff, the open wood, the river-reach, the green meadow in the midst, and the moss-grown wild-apple orchard, — places where one may have many thoughts and not decide anything. It is a scene which I can not only remember, as I might a vision, but when I will can bodily revisit, and find it even so, unaccountable, yet unpretending in its pleasant dreariness. When my thoughts are sensible of change, I love to see and sit on rocks which I *have* known, and pry into their moss, and see unchangeableness so established. I not yet gray on rocks forever gray, I no longer green under the evergreens. There is something even in the lapse of time by which time recovers itself.

As we have said, it proved a cool as well as breezy day, and by the time we reached Penichook Brook we were obliged to sit muffled in our cloaks, while the wind and current carried us along. We bounded swiftly over the rippling surface, far by many cultivated lands and the ends of fences which divided innumerable farms, with hardly a thought for the various lives which they separated; now by long rows of alders or groves of pines or oaks, and now by some homestead where the women and children stood outside to gaze at us,

till we had swept out of their sight, and beyond the limit of their longest Saturday ramble. We glided past the mouth of the Nashua, and not long after, of Salmon Brook, without more pause than the wind.

Salmon Brook,
Penichook,
Ye sweet waters of my brain,
When shall I look,
Or cast the hook,
In your waves again?

Silver eels,
Wooden creels,
These the baits that still allure,
And dragon-fly
That floated by,
May they still endure?

The shadows chased one another swiftly over wood and meadow, and their alternation harmonized with our mood. We could distinguish the clouds which cast each one, though never so high in the heavens. When a shadow flits across the landscape of the soul where is the substance? Probably, if we were wise enough, we should see to what virtue we are indebted for any happier moment we enjoy. No doubt we have earned it at some time, for the gifts of Heaven are never quite gratuitous. The constant abrasion and decay of our lives makes the soil of our future growth. The wood which we now mature, when it becomes virgin mould, determines the character of our second growth, whether that be oaks or pines. Every man casts a shadow; not his body only, but his imperfectly mingled spirit. This is

his grief. Let him turn which way he will, it falls opposite to the sun; short at noon, long at eve. Did you never see it? But, referred to the sun, it is widest at its base, which is no greater than his own capacity. The divine light is diffused almost entirely around us, and by means of the refraction of light, or else by a certain self-luminousness, or, as some will have it, transparency, if we preserve ourselves untarnished, we are able to enlighten our shaded side. At any rate, our darkest grief has that bronze color of the moon eclipsed. There is no ill which may not be dissipated, like the dark, if you let in a stronger light upon it. Shadows, referred to the source of light, are pyramids whose bases are never greater than those of the substances which cast them, but light is a spherical congeries of pyramids, whose very apexes are the sun itself, and hence the system shines with uninterrupted light. But if the light we use is but a paltry and narrow taper, most objects will cast a shadow wider than themselves.

The places where we had stopped or spent the night in our way up the river had already acquired a slight historical interest for us; for many upward days' voyaging were unraveled in this rapid downward passage. When one landed to stretch his limbs by walking, he soon found himself falling behind his companion, and was obliged to take advantage of the curves, and ford the brooks and ravines in haste, to recover his ground. Already the banks and the distant meadows wore a sober and deepened tinge, for the September air had shorn them of their summer's pride.

"And what's a life? The flourishing array
Of the proud summer meadow, which to-day
Wears her green plush, and is to-morrow hay."

The air was really the "fine element" which the poets describe. It had a finer and sharper grain, seen against the russet pastures and meadows, than before, as if cleansed of the summer's impurities.

Having passed the New Hampshire line and reached the Horseshoe Interval in Tyngsborough, where there is a high and regular second bank, we climbed up this in haste to get a nearer sight of the autumnal flowers, asters, goldenrod, and yarrow, and blue-curly (*Trichostema dichotomum*), humble roadside blossoms, and, lingering still, the harebell and the *Rhexia Virginica*. The last, growing in patches of lively pink flowers on the edge of the meadows, had almost too gay an appearance for the rest of the landscape, like a pink ribbon on the bonnet of a Puritan woman. Asters and goldenrods were the livery which nature wore at present. The latter alone expressed all the ripeness of the season, and shed their mellow lustre over the fields, as if the now declining summer's sun had bequeathed its hues to them. It is the floral solstice a little after midsummer, when the particles of golden light, the sundust, have, as it were, fallen like seeds on the earth, and produced these blossoms. On every hillside, and in every valley, stood countless asters, coreopses, tansies, goldenrods, and the whole race of yellow flowers, like Brahminical devotees, turning steadily with their luminary from morning till night.

"I see the goldenrod shine bright,
 As sun-showers at the birth of day,
 A golden plume of yellow light,
 That robs the Day-god's splendid ray.

"The aster's violet rays divide
 The bank with many stars for me,
 And yarrow in blanch tints is dyed,
 As moonlight floats across the sea.

"I see the emerald woods prepare
 To shed their vestiture once more,
 And distant elm-trees spot the air
 With yellow pictures softly o'er.

.

"No more the water-lily's pride
 In milk-white circles swims content,
 No more the blue-weed's clusters ride
 And mock the heavens' element.

.

"Autumn, thy wreath and mine are blent
 With the same colors, for to me
 A richer sky than all is lent,
 While fades my dream-like company.

"Our skies glow purple, but the wind
 Sobs chill through green trees and bright grass,
 To-day shines fair, and lurk behind
 The times that into winter pass.

"So fair we seem, so cold we are,
 So fast we hasten to decay,
 Yet through our night glows many a star,
 That still shall claim its sunny day."

So sang a Concord poet once.

There is a peculiar interest belonging to the still
 later flowers, which abide with us the approach of

winter. There is something witchlike in the appearance of the witch-hazel, which blossoms late in October and in November, with its irregular and angular spray and petals like furies' hair, or small ribbon streamers. Its blossoming, too, at this irregular period, when other shrubs have lost their leaves, as well as blossoms, looks like witches' craft. Certainly it blooms in no garden of man's. There is a whole fairy-land on the hillside where it grows.

Some have thought that the gales do not at present waft to the voyager the natural and original fragrance of the land, such as the early navigators described, and that the loss of many odoriferous native plants, sweet-scented grasses and medicinal herbs, which formerly sweetened the atmosphere, and rendered it salubrious, — by the grazing of cattle and the rooting of swine, — is the source of many diseases which now prevail; the earth, say they, having been long subjected to extremely artificial and luxurious modes of cultivation, to gratify the appetite, converted into a sty and hotbed, where men for profit increase the ordinary decay of nature.

According to the record of an old inhabitant of Tyngsborough, now dead, whose farm we were now gliding past, one of the greatest freshets on this river took place in October, 1785, and its height was marked by a nail driven into an apple tree behind his house. One of his descendants has shown this to me, and I judged it to be at least seventeen or eighteen feet above the level of the river at the time. According to Barber,

the river rose twenty-one feet above the common high-water mark at Bradford in the year 1818. Before the Lowell and Nashua railroad was built, the engineer made inquiries of the inhabitants along the banks as to how high they had known the river to rise. When he came to this house he was conducted to the apple tree, and as the nail was not then visible, the lady of the house placed her hand on the trunk where she said that she remembered the nail to have been from her childhood. In the meanwhile the old man put his arm inside the tree, which was hollow, and felt the point of the nail sticking through, and it was exactly opposite to her hand. The spot is now plainly marked by a notch in the bark. But as no one else remembered the river to have risen so high as this, the engineer disregarded this statement, and I learn that there has since been a freshet which rose within nine inches of the rails at Biscuit Brook, and such a freshet as that of 1785 would have covered the railroad two feet deep.

The revolutions of nature tell as fine tales, and make as interesting revelations, on this river's banks, as on the Euphrates or the Nile. This apple tree, which stands within a few rods of the river, is called "Elisha's apple tree," from a friendly Indian who was anciently in the service of Jonathan Tyng, and, with one other man, was killed here by his own race in one of the Indian wars, — the particulars of which affair were told us on the spot. He was buried close by, no one knew exactly where, but in the flood of 1785, so great a weight of water standing over the grave caused the earth to settle where it had once been disturbed, and when the

flood went down, a sunken spot, exactly of the form and size of the grave, revealed its locality ; but this was now lost again, and no future flood can detect it ; yet, no doubt, nature will know how to point it out in due time, if it be necessary, by methods yet more searching and unexpected. Thus there is not only the crisis when the spirit ceases to inspire and expand the body, marked by a fresh mound in the churchyard, but there is also a crisis when the body ceases to take up room as such in nature, marked by a fainter depression in the earth.

We sat awhile to rest us here upon the brink of the western bank, surrounded by the glossy leaves of the red variety of the mountain laurel, just above the head of Wicasuck Island, where we could observe some scows which were loading with clay from the opposite shore, and also overlook the grounds of the farmer, of whom I have spoken, who once hospitably entertained us for a night. He had on his pleasant farm, besides an abundance of the beach plum, or *Prunus littoralis*, which grew wild, the Canada plum under cultivation, fine Porter apples, some peaches and large patches of musk and water melons, which he cultivated for the Lowell market. Elisha's apple tree, too, bore a native fruit, which was prized by the family ; he raised the blood peach, which, as he showed us with satisfaction, was more like the oak in the color of its bark and in the setting of its branches, and was less liable to break down under the weight of the fruit, or the snow, than other varieties. It was of slower growth, and its branches strong and tough. There, also, was his nurs-

ery of native apple trees, thickly set upon the bank, which cost but little care, and which he sold to the neighboring farmers when they were five or six years old. To see a single peach upon its stem makes an impression of paradisaical fertility and luxury. This reminded us even of an old Roman farm, as described by Varro : " Cæsar Vopiscus Ædilicius, when he pleaded before the Censors, said that the grounds of Rosea were the garden (*sumen*, the tidbit) of Italy, in which a pole being left would not be visible the day after, on account of the growth of the herbage." This soil may not have been remarkably fertile, yet at this distance we thought that this anecdote might be told of the Tyngsborough farm.

When we passed Wicasuck Island, there was a pleasure boat containing a youth and a maiden on the island brook, which we were pleased to see, since it proved that there were some hereabouts to whom our excursion would not be wholly strange. Before this, a canal-boatman, of whom we made some inquiries respecting Wicasuck Island, and who told us that it was disputed property, suspected that we had a claim upon it, and though we assured him that all this was news to us, and explained, as well as we could, why we had come to see it, he believed not a word of it, and seriously offered us one hundred dollars for our title. The only other small boats which we met with were used to pick up driftwood. Some of the poorer class along the stream collect, in this way, all the fuel which they require. While one of us landed not far from this island to forage for provisions among the farmhouses whose

roofs we saw, — for our supply was now exhausted, — the other, sitting in the boat, which was moored to the shore, was left alone to his reflections.

If there is nothing new on the earth, still the traveler always has a resource in the skies. They are constantly turning a new page to view. The wind sets the types on this blue ground, and the inquiring may always read a new truth there. There are things there written with such fine and subtle tinctures, paler than the juice of limes, that to the diurnal eye they leave no trace, and only the chemistry of night reveals them. Every man's daylight firmament answers in his mind to the brightness of the vision in his starriest hour.

These continents and hemispheres are soon run over, but an always unexplored and infinite region makes off on every side from the mind, further than to sunset, and we can make no highway or beaten track into it, but the grass immediately springs up in the path, for we travel there chiefly with our wings.

Sometimes we see objects as through a thin haze, in their eternal relations, and they stand like Palenque and the Pyramids, and we wonder who set them up, and for what purpose. If we see the reality in things, of what moment is the superficial and apparent longer? What are the earth and all its interests beside the deep surmise which pierces and scatters them? While I sit here listening to the waves which ripple and break on this shore, I am absolved from all obligation to the past, and the council of nations may reconsider its votes. The grating of a pebble annuls them. Still occasionally in my dreams I remember that rippling water.

Oft as I turn me on my pillow o'er
I hear the lapse of waves upon the shore,
Distinct as if it were at broad noonday,
And I were drifting down from Nashua.

With a bending sail we glided rapidly by Tyngsborough and Chelmsford, each holding in one hand half of a tart country apple pie which we had purchased to celebrate our return, and in the other a fragment of the newspaper in which it was wrapped, devouring these with divided relish, and learning the news which had transpired since we sailed. The river here opened into a broad and straight reach of great length, which we bounded merrily over before a smacking breeze, with a devil-may-care look in our faces, and our boat a white bone in its mouth, and a speed which greatly astonished some scow boatmen whom we met. The wind in the horizon rolled like a flood over valley and plain, and every tree bent to the blast, and the mountains like school-boys turned their cheeks to it. They were great and current motions, the flowing sail, the running stream, the waving tree, the roving wind. The north wind stepped readily into the harness which we had provided, and pulled us along with good will. Sometimes we sailed as gently and steadily as the clouds overhead, watching the receding shores and the motions of our sail; the play of its pulse so like our own lives, so thin and yet so full of life, so noiseless when it labored hardest, so noisy and impatient when least effective; now bending to some generous impulse of the breeze, and then fluttering and flapping with a kind of human suspense. It was the

scale on which the varying temperature of distant atmospheres was graduated, and it was some attraction for us that the breeze it played with had been out of doors so long. Thus we sailed, not being able to fly, but as next best, making a long furrow in the fields of the Merrimack toward our home, with our wings spread, but never lifting our heel from the watery trench ; gracefully plowing homeward with our brisk and willing team, wind and stream, pulling together, the former yet a wild steer, yoked to his more sedate fellow. It was very near flying, as when the duck rushes through the water with an impulse of her wings, throwing the spray about her before she can rise. How we had stuck fast if drawn up but a few feet on the shore!

When we reached the great bend just above Middlesex, where the river runs east thirty-five miles to the sea, we at length lost the aid of this propitious wind, though we contrived to make one long and judicious tack carry us nearly to the locks of the canal. We were here locked through at noon by our old friend, the lover of the higher mathematics, who seemed glad to see us safe back again through so many locks; but we did not stop to consider any of his problems, though we could cheerfully have spent a whole autumn in this way another time, and never have asked what his religion was. It is so rare to meet with a man outdoors who cherishes a worthy thought in his mind, which is independent of the labor of his hands. Behind every man's busy-ness there should be a level of undisturbed serenity and industry, as within the reef encircling a

coral isle there is always an expanse of still water, where the depositions are going on which will finally raise it above the surface.

The eye which can appreciate the naked and absolute beauty of a scientific truth is far more rare than that which is attracted by a moral one. Few detect the morality in the former, or the science in the latter. Aristotle defined art to be *Λόγος τοῦ ἔργου ἄνευ ὕλης*, *The principle of the work without the wood*; but most men prefer to have some of the wood along with the principle; they demand that the truth be clothed in flesh and blood and the warm colors of life. They prefer the partial statement because it fits and measures them and their commodities best. But science still exists everywhere as the sealer of weights and measures at least.

We have heard much about the poetry of mathematics, but very little of it has yet been sung. The ancients had a juster notion of their poetic value than we. The most distinct and beautiful statement of any truth must take at last the mathematical form. We might so simplify the rules of moral philosophy, as well as of arithmetic, that one formula would express them both. All the moral laws are readily translated into natural philosophy, for often we have only to restore the primitive meaning of the words by which they are expressed, or to attend to their literal instead of their metaphorical sense. They are already *supernatural* philosophy. The whole body of what is now called moral or ethical truth existed in the golden age as abstract science. Or,

if we prefer, we may say that the laws of Nature are the purest morality. The Tree of Knowledge is a Tree of Knowledge of good and evil. He is not a true man of science who does not bring some sympathy to his studies, and expect to learn something by behavior as well as by application. It is childish to rest in the discovery of mere coincidences, or of partial and extraneous laws. The study of geometry is a petty and idle exercise of the mind, if it is applied to no larger system than the starry one. Mathematics should be mixed not only with physics but with ethics, *that is mixed mathematics*. The fact which interests us most is the life of the naturalist. The purest science is still biographical. Nothing will dignify and elevate science while it is sundered so wholly from the moral life of its devotee, and he professes another religion than it teaches, and worships at a foreign shrine. Anciently the faith of a philosopher was identical with his system, or, in other words, his view of the universe.

My friends mistake when they communicate facts to me with so much pains. Their presence, even their exaggerations and loose statements, are equally good facts for me. I have no respect for facts even except when I would use them, and for the most part I am independent of those which I hear, and can afford to be inaccurate, or, in other words, to substitute more present and pressing facts in their place.

The poet uses the results of science and philosophy, and generalizes their widest deductions.

The process of discovery is very simple. An unwearied and systematic application of known laws to

nature causes the unknown to reveal themselves. Almost any *mode* of observation will be successful at last, for what is most wanted is method. Only let something be determined and fixed around which observation may rally. How many new relations a foot-rule alone will reveal, and to how many things still this has not been applied! What wonderful discoveries have been and may still be made with a plumb-line, a level, a surveyor's compass, a thermometer, or a barometer! Where there is an observatory and a telescope, we expect that any eyes will see new worlds at once. I should say that the most prominent scientific men of our country, and perhaps of this age, are either serving the arts and not pure science, or are performing faithful but quite subordinate labors in particular departments. They make no steady and systematic approaches to the central fact. A discovery is made, and at once the attention of all observers is distracted to that, and it draws many analogous discoveries in its train; as if their work were not already laid out for them, but they had been lying on their oars. There is wanting constant and accurate observation with enough of theory to direct and discipline it.

But, above all, there is wanting genius. Our books of science, as they improve in accuracy, are in danger of losing the freshness and vigor and readiness to appreciate the real laws of Nature, which is a marked merit in the oftentimes false theories of the ancients. I am attracted by the slight pride and satisfaction, the emphatic and even exaggerated style, in which some of the older naturalists speak of the operations of Na-

ture, though they are better qualified to appreciate than to discriminate the facts. Their assertions are not without value when disproved. If they are not facts, they are suggestions for nature herself to act upon. "The Greeks," says Gesner, "had a common proverb (*Λαγὸς καθέϋδον*), a sleeping hare, for a dissembler or counterfeit; because the hare sees when she sleeps; for this is an admirable and rare work of Nature, that all the residue of her bodily parts take their rest, but the eye standeth continually sentinel."

Observation is so wide awake, and facts are being so rapidly added to the sum of human experience, that it appears as if the theorizer would always be in arrears, and were doomed forever to arrive at imperfect conclusions; but the power to perceive a law is equally rare in all ages of the world, and depends but little on the number of facts observed. The senses of the savage will furnish him with facts enough to set him up as a philosopher. The ancients can still speak to us with authority, even on the themes of geology and chemistry, though these studies are thought to have had their birth in modern times. Much is said about the progress of science in these centuries. I should say that the useful results of science had accumulated, but that there had been no accumulation of knowledge, strictly speaking, for posterity; for knowledge is to be acquired only by a corresponding experience. How can we *know* what we are *told* merely? Each man can interpret another's experience only by his own. We read that Newton discovered the law of gravitation, but how many who have heard of his famous discovery have

recognized the same truth that he did? It may be not one. The revelation which was then made to him has not been superseded by the revelation made to any successor.

We see the *planet* fall,
And that is all.

In a review of Sir James Clark Ross's "Antarctic Voyage of Discovery," there is a passage which shows how far a body of men are commonly impressed by an object of sublimity, and which is also a good instance of the step from the sublime to the ridiculous. After describing the discovery of the Antarctic Continent, at first seen a hundred miles distant over fields of ice, — stupendous ranges of mountains from seven and eight to twelve and fourteen thousand feet high, covered with eternal snow and ice, in solitary and inaccessible grandeur, at one time the weather being beautifully clear, and the sun shining on the icy landscape; a continent whose islands only are accessible, and these exhibited "not the smallest trace of vegetation," only in a few places the rocks protruding through their icy covering, to convince the beholder that land formed the nucleus, and that it was not an iceberg, — the practical British reviewer proceeds thus, sticking to his last: "On the 22d of January, afternoon, the Expedition made the latitude of $74^{\circ} 20'$, and by 7^h P. M., having ground [ground! where did they get ground?] to believe that they were then in a higher southern latitude than had been attained by that enterprising seaman, the late Captain James Weddel, and therefore higher than all their predecessors, an extra allowance

of grog was issued to the crews as a reward for their perseverance."

Let not us sailors of late centuries take upon ourselves any airs on account of our Newtons and our Cuviers; we deserve an extra allowance of grog only.

We endeavored in vain to persuade the wind to blow through the long corridor of the canal, which is here cut straight through the woods, and were obliged to resort to our old expedient of drawing by a cord. When we reached the Concord, we were forced to row once more in good earnest, with neither wind nor current in our favor, but by this time the rawness of the day had disappeared, and we experienced the warmth of a summer afternoon. This change in the weather was favorable to our contemplative mood, and disposed us to dream yet deeper at our oars, while we floated in imagination farther down the stream of time, as we had floated down the stream of the Merrimack, to poets of a milder period than had engaged us in the morning. Chelmsford and Billerica appeared like old English towns, compared with Merrimack and Nashua, and many generations of civil poets might have lived and sung here.

What a contrast between the stern and desolate poetry of Ossian, and that of Chaucer, and even of Shakespeare and Milton, much more of Dryden, and Pope, and Gray! Our summer of English poetry, like the Greek and Latin before it, seems well advanced towards its fall, and laden with the fruit and foliage

of the season, with bright autumnal tints, but soon the winter will scatter its myriad clustering and shading leaves, and leave only a few desolate and fibrous boughs to sustain the snow and rime, and creak in the blasts of age. We cannot escape the impression that the Muse has stooped a little in her flight, when we come to the literature of civilized eras. Now first we hear of various ages and styles of poetry; it is pastoral, and lyric, and narrative, and didactic; but the poetry of runic monuments is of one style, and for every age. The bard has in a great measure lost the dignity and sacredness of his office. Formerly he was called a seer, but now it is thought that one man sees as much as another. He has no longer the bardic rage, and only conceives the deed, which he formerly stood ready to perform. Hosts of warriors earnest for battle could not mistake nor dispense with the ancient bard. His lays were heard in the pauses of the fight. There was no danger of his being overlooked by his contemporaries. But now the hero and the bard are of different professions. When we come to the pleasant English verse, the storms have all cleared away, and it will never thunder and lighten more. The poet has come within doors, and exchanged the forest and crag for the fireside, the hut of the Gael, and Stonehenge, with its circles of stones, for the house of the Englishman. No hero stands at the door prepared to break forth into song or heroic action, but a homely Englishman, who cultivates the art of poetry. We see the comfortable fireside, and hear the crackling fagots, in all the verse.

Notwithstanding the broad humanity of Chaucer,

and the many social and domestic comforts which we meet with in his verse, we have to narrow our vision somewhat to consider him, as if he occupied less space in the landscape, and did not stretch over hill and valley as Ossian does. Yet, seen from the side of posterity, as the father of English poetry, preceded by a long silence or confusion in history, unenlivened by any strain of pure melody, we easily come to reverence him. Passing over the earlier Continental poets, since we are bound to the pleasant archipelago of English poetry, Chaucer's is the first name after that misty weather in which Ossian lived, which can detain us long. Indeed, though he represents so different a culture and society, he may be regarded as in many respects the Homer of the English poets. Perhaps he is the youthfulest of them all. We return to him as to the purest well, the fountain farthest removed from the highway of desultory life. He is so natural and cheerful, compared with later poets, that we might almost regard him as a personification of spring. To the faithful reader his muse has even given an aspect to his times, and when he is fresh from perusing him, they seem related to the golden age. It is still the poetry of youth and life, rather than of thought; and though the moral vein is obvious and constant, it has not yet banished the sun and daylight from his verse. The loftiest strains of the Muse are, for the most part, sublimely plaintive, and not a carol as free as Nature's. The content which the sun shines to celebrate from morning to evening is unsung. The Muse solaces herself, and is not ravished but consoled. There is a ca-

tastrophe implied, and a tragic element in all our verse, and less of the lark and morning dews, than of the nightingale and evening shades. But in Homer and Chaucer there is more of the innocence and serenity of youth than in the more modern and moral poets. The Iliad is not Sabbath but morning reading, and men cling to this old song, because they still have moments of unbaptized and uncommitted life, which give them an appetite for more. To the innocent there are neither cherubim nor angels. At rare intervals we rise above the necessity of virtue into an unchangeable morning light, in which we have only to live right on and breathe the ambrosial air. The Iliad represents no creed nor opinion, and we read it with a rare sense of freedom and irresponsibility, as if we trod on native ground, and were autochthones of the soil.

Chaucer had eminently the habits of a literary man and a scholar. There were never any times so stirring that there were not to be found some sedentary still. He was surrounded by the din of arms. The battles of Hallidon Hill and Neville's Cross, and the still more memorable battles of Cressy and Poitiers, were fought in his youth; but these did not concern our poet much, Wickliffe and his reform much more. He regarded himself always as one privileged to sit and converse with books. He helped to establish the literary class. His character as one of the fathers of the English language would alone make his works important, even those which have little poetical merit. He was as simple as Wordsworth in preferring his homely but vigorous Saxon tongue, when it was neglected by the court, and

had not yet attained to the dignity of a literature, and rendered a similar service to his country to that which Dante rendered to Italy. If Greek sufficeth for Greek, and Arabic for Arabian, and Hebrew for Jew, and Latin for Latin, then English shall suffice for him, for any of these will serve to teach truth "right as divers pathes leaden divers folke the right waye to Rome." In the Testament of Love he writes, "Let then clerkes enditen in Latin, for they have the propertie of science, and the knowinge in that facultie, and lette Frenchmen in their Frenche also enditen their queinte termes, for it is kyndely to their mouthes, and let us shewe our fantasies in soche wordes as we lerneden of our dames tonge."

He will know how to appreciate Chaucer best who has come down to him the natural way, through the meagre pastures of Saxon and ante-Chaucerian poetry; and yet, so human and wise he appears after such diet, that we are liable to misjudge him still. In the Saxon poetry extant, in the earliest English, and the contemporary Scottish poetry, there is less to remind the reader of the rudeness and vigor of youth than of the feebleness of a declining age. It is for the most part translation of imitation merely, with only an occasional and slight tinge of poetry, oftentimes the falsehood and exaggeration of fable, without its imagination to redeem it, and we look in vain to find antiquity restored, humanized, and made blithe again by some natural sympathy between it and the present. But Chaucer is fresh and modern still, and no dust settles on his true passages. It lightens along the line, and we are reminded

that flowers have bloomed, and birds sung, and hearts beaten in England. Before the earnest gaze of the reader, the rust and moss of time gradually drop off, and the original green life is revealed. He was a homely and domestic man, and did breathe quite as modern men do.

There is no wisdom that can take place of humanity, and we find *that* in Chaucer. We can expand at last in his breadth, and we think that we could have been that man's acquaintance. He was worthy to be a citizen of England, while Petrarch and Boccaccio lived in Italy, and Tell and Tamerlane in Switzerland and in Asia, and Bruce in Scotland, and Wickliffe and Gower and Edward the Third and John of Gaunt and the Black Prince were his own countrymen as well as contemporaries; all stout and stirring names. The fame of Roger Bacon came down from the preceding century, and the name of Dante still possessed the influence of a living presence. On the whole, Chaucer impresses us as greater than his reputation, and not a little like Homer and Shakespeare, for he would have held up his head in their company. Among early English poets he is the landlord and host, and has the authority of such. The affectionate mention which succeeding early poets make of him, coupling him with Homer and Virgil, is to be taken into the account in estimating his character and influence. King James and Dunbar of Scotland speak of him with more love and reverence than any modern author of his predecessors of the last century. The same childlike relation is without a parallel now. For the most part we read him without criticism, for he

does not plead his own cause, but speaks for his readers, and has that greatness of trust and reliance which compels popularity. He confides in the reader, and speaks privily with him, keeping nothing back. And in return the reader has great confidence in him, that he tells no lies, and reads his story with indulgence, as if it were the circumlocution of a child, but often discovers afterwards that he has spoken with more directness and economy of words than a sage. He is never heartless,

"For first the thing is thought within the hart,
Er any word out from the mouth astart."

And so new was all his theme in those days, that he did not have to invent, but only to tell.

We admire Chaucer for his sturdy English wit. The easy height he speaks from in his Prologue to the *Canterbury Tales*, as if he were equal to any of the company there assembled, is as good as any particular excellence in it. But though it is full of good sense and humanity, it is not transcendent poetry. For picturesque description of persons it is, perhaps, without a parallel in English poetry; yet it is essentially humorous, as the loftiest genius never is. Humor, however broad and genial, takes a narrower view than enthusiasm. To his own finer vein he added all the common wit and wisdom of his time, and everywhere in his works his remarkable knowledge of the world and nice perception of character, his rare common sense and proverbial wisdom, are apparent. His genius does not soar like Milton's, but is genial and familiar. It shows great tenderness and delicacy, but not the heroic sentiment. It is only a greater portion of humanity with all

its weakness. He is not heroic, as Raleigh, nor pious, as Herbert, nor philosophical, as Shakespeare, but he is the child of the English muse, that child which is the father of the man. The charm of his poetry consists often only in an exceeding naturalness, perfect sincerity, with the behavior of a child rather than of a man.

Gentleness and delicacy of character are everywhere apparent in his verse. The simplest and humblest words come readily to his lips. No one can read the Prioress's tale, understanding the spirit in which it was written, and in which the child sings *O alma redemptoris mater*, or the account of the departure of Constance with her child upon the sea, in the Man of Lawe's tale, without feeling the native innocence and refinement of the author. Nor can we be mistaken respecting the essential purity of his character, disregarding the apology of the manners of the age. A simple pathos and feminine gentleness, which Wordsworth only occasionally approaches, but does not equal, are peculiar to him. We are tempted to say that his genius was feminine, not masculine. It was such a feminineness, however, as is rarest to find in woman, though not the appreciation of it ; perhaps it is not to be found at all in woman, but is only the feminine in man.

Such pure and genuine and childlike love of Nature is hardly to be found in any poet.

Chaucer's remarkably trustful and affectionate character appears in his familiar, yet innocent and reverent, manner of speaking of his God. He comes into his thought without any false reverence, and with no more parade than the zephyr to his ear. If Nature is our

mother, then God is our father. There is less love and simple, practical trust in Shakespeare and Milton. How rarely in our English tongue do we find expressed any affection for God! Certainly, there is no sentiment so rare as the love of God. Herbert almost alone expresses it, "Ah, my dear God!" Our poet uses similar words with propriety; and whenever he sees a beautiful person, or other object, prides himself on the "maistry" of his God. He even recommends Dido to be his bride, —

"If that God that heaven and yearth made,
Would have a love for beauty and goodnesse,
And womanhede, trouth, and semeliness."

But in justification of our praise, we must refer to his works themselves; to the prologue to the *Canterbury Tales*, the account of *Gentilesse*, the *Flower and the Leaf*, the stories of *Griselda*, *Virginia*, *Ariadne*, and *Blanche the Duchesse*, and much more of less distinguished merit. There are many poets of more taste, and better manners, who knew how to leave out their dullness; but such negative genius cannot detain us long; we shall return to Chaucer still with love. Some natures which are really rude and ill-developed, have yet a higher standard of perfection than others which are refined and well balanced. Even the clown has taste, whose dictates, though he disregards them, are higher and purer than those which the artist obeys. If we have to wander through many dull and prosaic passages in Chaucer, we have at least the satisfaction of knowing that it is not an artificial dullness, but too easily matched by many passages in life. We confess that we

feel a disposition commonly to concentrate sweets, and accumulate pleasures ; but the poet may be presumed always to speak as a traveler, who leads us through a varied scenery, from one eminence to another, and it is, perhaps, more pleasing, after all, to meet with a fine thought in its natural setting. Surely fate has enshrined it in these circumstances for some end. Nature strews her nuts and flowers broadcast, and never collects them into heaps. This was the soil it grew in, and this the hour it bloomed in ; if sun, wind, and rain came here to cherish and expand the flower, shall not we come here to pluck it ?

A true poem is distinguished not so much by a felicitous expression, or any thought it suggests, as by the atmosphere which surrounds it. Most have beauty of outline merely, and are striking as the form and bearing of a stranger ; but true verses come toward us indistinctly, as the very breath of all friendliness, and envelop us in their spirit and fragrance. Much of our poetry has the very best manners, but no character. It is only an unusual precision and elasticity of speech, as if its author had taken, not an intoxicating draught, but an electuary. It has the distinct outline of sculpture, and chronicles an early hour. Under the influence of passion all men speak thus distinctly, but wrath is not always divine.

There are two classes of men called poets. The one cultivates life, the other art, — one seeks food for nutriment, the other for flavor ; one satisfies hunger, the other gratifies the palate. There are two kinds of writ-

ing, both great and rare, — one that of genius, or the inspired, the other of intellect and taste, in the intervals of inspiration. The former is above criticism, always correct, giving the law to criticism. It vibrates and pulsates with life forever. It is sacred, and to be read with reverence, as the works of nature are studied. There are few instances of a sustained style of this kind ; perhaps every man has spoken words, but the speaker is then careless of the record. Such a style removes us out of personal relations with its author ; we do not take his words on our lips, but his sense into our hearts. It is the stream of inspiration, which bubbles out, now here, now there, now in this man, now in that. It matters not through what ice-crystals it is seen, now a fountain, now the ocean stream running underground. It is in Shakespeare, Alpheus, in Burns, Arcturæ ; but ever the same. The other is self-possessed and wise. It is reverent of genius, and greedy of inspiration. It is conscious in the highest and the least degree. It consists with the most perfect command of the faculties. It dwells in a repose as of the desert, and objects are as distinct in it as oases or palms in the horizon of sand. The train of thought moves with subdued and measured step, like a caravan. But the pen is only an instrument in its hand, and not instinct with life, like a longer arm. It leaves a thin varnish or glaze over all its work. The works of Goethe furnish remarkable instances of the latter.

There is no just and serene criticism as yet. Nothing is considered simply as it lies in the lap of eternal beauty, but our thoughts, as well as our bodies, must

be dressed after the latest fashions. Our taste is too delicate and particular. It says nay to the poet's work, but never yea to his hope. It invites him to adorn his deformities, and not to cast them off by expansion, as the tree its bark. We are a people who live in a bright light, in houses of pearl and porcelain, and drink only light wines, whose teeth are easily set on edge by the least natural sour. If we had been consulted, the backbone of the earth would have been made, not of granite, but of Bristol spar. A modern author would have died in infancy in a ruder age. But the poet is something more than a scald, "a smoother and polisher of language;" he is a Cincinnatus in literature, and occupies no west end of the world. Like the sun, he will indifferently select his rhymes, and with a liberal taste weave into his verse the planet and the stubble.

In these old books the stucco has long since crumbled away, and we read what was sculptured in the granite. They are rude and massive in their proportions, rather than smooth and delicate in their finish. The workers in stone polish only their chimney ornaments, but their pyramids are roughly done. There is a soberness in a rough aspect, as of unhewn granite, which addresses a depth in us, but a polished surface hits only the ball of the eye. The true finish is the work of time, and the use to which a thing is put. The elements are still polishing the pyramids. Art may varnish and gild, but it can do no more. A work of genius is rough-hewn from the first, because it anticipates the lapse of time, and has an ingrained polish, which still appears when fragments are broken off, an essential quality of its

substance. Its beauty is at the same time its strength, and it breaks with a lustre.

The great poem must have the stamp of greatness as well as its essence. The reader easily goes within the shallowest contemporary poetry, and informs it with all the life and promise of the day, as the pilgrim goes within the temple, and hears the faintest strains of the worshippers; but it will have to speak to posterity, traversing these deserts, through the ruins of its outmost walls, by the grandeur and beauty of its proportions.

But here on the stream of the Concord, where we have all the while been bodily, Nature, who is superior to all styles and ages, is now, with pensive face, composing her poem *Autumn*, with which no work of man will bear to be compared.

In summer we live out of doors, and have only impulses and feelings, which are all for action, and must wait commonly for the stillness and longer nights of autumn and winter before any thought will subside; we are sensible that behind the rustling leaves, and the stacks of grain, and the bare clusters of the grape, there is the field of a wholly new life, which no man has lived; that even this earth was made for more mysterious and nobler inhabitants than men and women. In the hues of October sunsets, we see the portals to other mansions than those which we occupy, not far off geographically, —

“There is a place beyond that flaming hill,
From whence the stars their thin appearance shed,
A place beyond all place, where never ill,
Nor impure thought was ever harbored.”

Sometimes a mortal feels in himself Nature, — not his Father but his Mother stirs within him, and he becomes immortal with her immortality. From time to time she claims kindredship with us, and some globule from her veins steals up into our own.

I am the autumnal sun,
 With autumn gales my race is run;
 When will the hazel put forth its flowers,
 Or the grape ripen under my bowers?
 When will the harvest or the hunter's moon
 Turn my midnight into mid-noon?
 I am all sere and yellow,
 And to my core mellow.
 The mast is dropping within my woods,
 The winter is lurking within my moods,
 And the rustling of the withered leaf
 Is the constant music of my grief.

To an unskillful rhymers the Muse thus spoke in prose: —

The moon no longer reflects the day, but rises to her absolute rule, and the husbandman and hunter acknowledge her for their mistress. Asters and golden-rods reign along the way, and the life-everlasting withers not. The fields are reaped and shorn of their pride, but an inward verdure still crowns them. The thistle scatters its down on the pool, and yellow leaves clothe the vine, and naught disturbs the serious life of men. But behind the sheaves, and under the sod, there lurks a ripe fruit, which the reapers have not gathered, the true harvest of the year, which it bears forever, annually watering and maturing it, and man never severs the stalk which bears this palatable fruit.

Men nowhere, east or west, live yet a *natural* life, round which the vine clings, and which the elm willingly shadows. Man would desecrate it by his touch, and so the beauty of the world remains veiled to him. He needs not only to be spiritualized, but *naturalized*, on the soil of earth. Who shall conceive what kind of roof the heavens might extend over him, what seasons minister to him, and what employment dignify his life! Only the convalescent raise the veil of nature. An immortality in his life would confer immortality on his abode. The winds should be his breath, the seasons his moods, and he should impart of his serenity to Nature herself. But such as we know him he is ephemeral like the scenery which surrounds him, and does not aspire to an enduring existence. When we come down into the distant village, visible from the mountain-top, the nobler inhabitants with whom we peopled it have departed, and left only vermin in its desolate streets. It is the imagination of poets which puts those brave speeches into the mouths of their heroes. They may feign that Cato's last words were

"The earth, the air and seas I know, and all
The joys and horrors of their peace and wars;
And now will view the Gods' state and the stars,"

but such are not the thoughts nor the destiny of common men. What is this heaven which they expect, if it is no better than they expect? Are they prepared for a better than they can now imagine? Where is the heaven of him who dies on a stage, in a theatre? Here or nowhere is our heaven.

“Although we see celestial bodies move
Above the earth, the earth we till and love.”

We can conceive of nothing more fair than something which we have experienced. “The remembrance of youth is a sigh.” We linger in manhood to tell the dreams of our childhood, and they are half forgotten ere we have learned the language. We have need to be earth-born as well as heaven-born, *γγγενεῖς*, as was said of the Titans of old, or in a better sense than they. There have been heroes for whom this world seemed expressly prepared, as if creation had at last succeeded; whose daily life was the stuff of which our dreams are made, and whose presence enhanced the beauty and ampleness of Nature herself. Where they walked, —

“Largior hic campos aether et lumine vestit
Purpureo: Solemque suum, sua sidera norunt.”

“Here a more copious air invests the fields, and clothes with purple light; and they know their own sun and their own stars.” We love to hear some men speak, though we hear not what they say; the very air they breathe is rich and perfumed, and the sound of their voices falls on the ear like the rustling of leaves or the crackling of the fire. They stand many deep. They have the heavens for their abettors, as those who have never stood from under them, and they look at the stars with an answering ray. Their eyes are like glow-worms, and their motions graceful and flowing, as if a place were already found for them, like rivers flowing through valleys. The distinctions of morality, of right and wrong, sense and nonsense, are petty, and have

lost their significance, beside these pure primeval natures. When I consider the clouds stretched in stupendous masses across the sky, frowning with darkness or glowing with downy light, or gilded with the rays of the setting sun, like the battlements of a city in the heavens, their grandeur appears thrown away on the meanness of my employment; the drapery is altogether too rich for such poor acting. I am hardly worthy to be a suburban dweller outside those walls.

“Unless above himself he can
Erect himself, how poor a thing is man!”

With our music we would fain challenge transiently another and finer sort of intercourse than our daily toil permits. The strains come back to us amended in the echo, as when a friend reads our verse. Why have they so painted the fruits, and freighted them with such fragrance as to satisfy a more than animal appetite?

“I asked the schoolman, his advice was free,
But scored me out too intricate a way.”

These things imply, perchance, that we live on the verge of another and purer realm, from which these odors and sounds are wafted over to us. The borders of our plot are set with flowers, whose seeds were blown from more Elysian fields adjacent. They are the pot-herbs of the gods. Some fairer fruits and sweeter fragrances wafted over to us betray another realm's vicinity. There, too, does Echo dwell, and there is the abutment of the rainbow's arch.

A finer race and finer fed
Feast and revel o'er our head,

And we titmen are only able
To catch the fragments from their table.
Theirs is the fragrance of the fruits,
While we consume the pulp and roots.
What are the moments that we stand
Astonished on the Olympian land!

We need pray for no higher heaven than the pure senses can furnish, a *purely* sensuous life. Our present senses are but the rudiments of what they are destined to become. We are comparatively deaf and dumb and blind, and without smell or taste or feeling. Every generation makes the discovery that its divine vigor has been dissipated, and each sense and faculty misapplied and debauched. The ears were made, not for such trivial uses as men are wont to suppose, but to hear celestial sounds. The eyes were not made for such groveling uses as they are now put to and worn out by, but to behold beauty now invisible. May we not *see* God? Are we to be put off and amused in this life, as it were with a mere allegory? Is not Nature, rightly read, that of which she is commonly taken to be the symbol merely? When the common man looks into the sky, which he has not so much profaned, he thinks it less gross than the earth, and with reverence speaks of "the Heavens," but the seer will in the same sense speak of "the Earths," and his Father who is in them. "Did not he that made that which is *within* make that which is *without* also?" What is it, then, to educate but to develop these divine germs called the senses? for individuals and states to deal magnanimously with the rising generation, leading it not into temptation,

—not teach the eye to squint, nor attune the ear to profanity. But where is the instructed teacher? Where are the *normal* schools?

A Hindoo sage said, "As a dancer, having exhibited herself to the spectator, desists from the dance, so does Nature desist, having manifested herself to soul. Nothing, in my opinion, is more gentle than Nature; once aware of having been seen, she does not again expose herself to the gaze of soul."

It is easier to discover another such a new world as Columbus did, than to go within one fold of this which we appear to know so well; the land is lost sight of, the compass varies, and mankind mutiny; and still history accumulates like rubbish before the portals of nature. But there is only necessary a moment's sanity and sound senses, to teach us that there is a nature behind the ordinary, in which we have only some vague preëmption right and western reserve as yet. We live on the outskirts of that region. Carved wood, and floating boughs, and sunset skies are all that we know of it. We are not to be imposed on by the longest spell of weather. Let us not, my friends, be wheedled and cheated into good behavior to earn the salt of our eternal porridge, whoever they are that attempt it. Let us wait a little, and not purchase any clearing here, trusting that richer bottoms will soon be put up. It is but thin soil where we stand; I have felt my roots in a richer ere this. I have seen a bunch of violets in a glass vase, tied loosely with a straw, which reminded me of myself.

A WEEK

I am a parcel of vain strivings tied
 By a chance bond together,
 Dangling this way and that, their links
 Were made so loose and wide,
 Methinks,
 For milder weather.

A bunch of violets without their roots,
 And sorrel intermixed,
 Encircled by a wisp of straw
 Once coiled about their shoots,
 The law
 By which I'm fixed.

A nosegay which Time clutched from out
 Those fair Elysian fields,
 With weeds and broken stems, in haste,
 Doth make the rabble rout
 That waste
 The day he yields.

And here I bloom for a short hour unseen,
 Drinking my juices up,
 With no root in the land
 To keep my branches green,
 But stand
 In a bare cup.

Some tender buds were left upon my stem
 In mimicry of life,
 But ah! the children will not know,
 Till time has withered them,
 The woe
 With which they're rife.

But now I see I was not plucked for naught,
 And after in life's vase
 Of glass set while I might survive,
 But by a kind hand brought
 Alive
 To a strange place.

That stock thus thinned will soon redeem its hours,

And by another year,

Such as God knows, with freer air,

More fruits and fairer flowers

Will bear,

While I droop here.

This world has many rings, like Saturn, and we live now on the outmost of them all. None can say deliberately that he inhabits the same sphere, or is contemporary, with the flower which his hands have plucked, and though his feet may seem to crush it, inconceivable spaces and ages separate them, and perchance there is no danger that he will hurt it. What do the botanists know? Our lives should go between the lichen and the bark. The eye may see for the hand, but not for the mind. We are still being born, and have as yet but a dim vision of sea and land, sun, moon, and stars, and shall not see clearly till after nine days at least. That is a pathetic inquiry among travelers and geographers after the site of ancient Troy. It is not near where they think it is. When a thing is decayed and gone, how indistinct must be the place it occupied!

The anecdotes of modern astronomy affect me in the same way as do those faint revelations of the Real which are vouchsafed to men from time to time, or rather from eternity to eternity. When I remember the history of that faint light in our firmament which we call Venus, which ancient men regarded, and which most modern men still regard, as a bright spark attached to a hollow sphere revolving about our earth, but which we have discovered to be *another world*, in itself, — how Coper-

nicus, reasoning long and patiently about the matter, predicted confidently concerning it, before yet the telescope had been invented, that if ever men came to see it more clearly than they did then, they would discover that it had phases like our moon, and that within a century after his death the telescope was invented, and that prediction verified, by Galileo, — I am not without hope that we may, even here and now, obtain some accurate information concerning that OTHER WORLD which the instinct of mankind has so long predicted. Indeed, all that we call science, as well as all that we call poetry, is a particle of such information, accurate as far as it goes, though it be but to the confines of the truth. If we can reason so accurately, and with such wonderful confirmation of our reasoning, respecting so-called material objects and events infinitely removed beyond the range of our natural vision, so that the mind hesitates to trust its calculations even when they are confirmed by observation, why may not our speculations penetrate as far into the immaterial starry system, of which the former is but the outward and visible type? Surely, we are provided with senses as well fitted to penetrate the spaces of the real, the substantial, the eternal, as these outward are to penetrate the material universe. Veias, Menu, Zoroaster, Socrates, Christ, Shakespeare, Swedenborg, — these are some of our astronomers.

There are perturbations in our orbits produced by the influences of outlying spheres, and no astronomer has ever yet calculated the elements of that undiscovered world which produces them. I perceive in the common train of my thoughts a natural and uninter-

rupted sequence, each implying the next, or, if interruption occurs, it is occasioned by a new object being presented to my *senses*. But a steep, and sudden, and by these means unaccountable transition is that from a comparatively narrow and partial, what is called common-sense view of things, to an infinitely expanded and liberating one, from seeing things as men describe them, to seeing them as men cannot describe them. This implies a sense which is not common, but rare in the wisest man's experience ; which is sensible or sentient of more than common.

In what inclosures does the astronomer loiter! His skies are shoal, and imagination, like a thirsty traveler, pants to be through their desert. The roving mind impatiently bursts the fetters of astronomical orbits, like cobwebs in a corner of its universe, and launches itself to where distance fails to follow, and law, such as science has discovered, grows weak and weary. The mind knows a distance and a space of which all those sums combined do not make a unit of measure, — the interval between that which *appears* and that which *is*. I know that there are many stars, I know that they are far enough off, bright enough, steady enough in their orbits, — but what are they all worth? They are more waste land in the West, — star territory, — to be made slave States, perchance, if we colonize them. I have interest but for six feet of star, and that interest is transient. Then farewell to all ye bodies, such as I have known ye.

Every man, if he is wise, will stand on such bottom

as will sustain him, and if one gravitates downward more strongly than another, he will not venture on those meads where the latter walks securely, but rather leave the cranberries which grow there unraked by himself. Perchance, some spring, a higher freshet will float them within his reach, though they may be watery and frost-bitten by that time. Such shriveled berries I have seen in many a poor man's garret, ay, in many a church-bin and state-coffer, and with a little water and heat they swell again to their original size and fairness, and added sugar enough, stead mankind for sauce to this world's dish.

What is called common sense is excellent in its department, and as invaluable as the virtue of conformity in the army and navy, — for there must be subordination, — but uncommon sense, that sense which is common only to the wisest, is as much more excellent as it is more rare. Some aspire to excellence in the subordinate department, and may God speed them. What Fuller says of masters of colleges is universally applicable, that “a little alloy of dullness in a master of a college makes him fitter to manage secular affairs.”

“He that wants faith, and apprehends a grief
Because he wants it, hath a true belief;
And he that grieves because his grief 's so small,
Has a true grief, and the best Faith of all.”

Or be encouraged by this other poet's strain:—

“By them went Fido, marshal of the field:
Weak was his mother when she gave him day;
And he at first a sick and weakly child,
As e'er with tears welcomed the sunny ray;

Yet when more years afford more growth and might,
A champion stout he was, and puissant knight,
As ever came in field, or shone in armor bright.

“Mountains he flings in seas with mighty hand;
Stops and turns back the sun’s impetuous course;
Nature breaks Nature’s laws at his command;
No force of Hell or Heaven withstands his force;
Events to come yet many ages hence,
He present makes, by wondrous prescience;
Proving the senses blind by being blind to sense.”

“Yesterday, at dawn,” says Hafiz, “God delivered me from all worldly affliction; and amidst the gloom of night presented me with the water of immortality.”

In the life of Sadi by Dowlat Shah occurs this sentence: “The eagle of the immaterial soul of Shaikh Sadi shook from his plumage the dust of his body.”

Thus thoughtfully we were rowing homeward to find some autumnal work to do, and help on the revolution of the seasons. Perhaps Nature would condescend to make use of us even without our knowledge, as when we help to scatter her seeds in our walks, and carry burs and cockles on our clothes from field to field.

All things are current found
On earthly ground,
Spirits and elements
Have their descents.

Night and day, year on year,
High and low, far and near,
These are our own aspects,
These are our own regrets.

Ye gods of the shore,
Who abide evermore,
I see your far headland,
Stretching on either hand;

I hear the sweet evening sounds
From your undecaying grounds;
Cheat me no more with time,
Take me to your clime.

As it grew later in the afternoon, and we rowed leisurely up the gentle stream, shut in between fragrant and blooming banks, where we had first pitched our tent, and drew nearer to the fields where our lives had passed, we seemed to detect the hues of our native sky in the southwest horizon. The sun was just setting behind the edge of a wooded hill, so rich a sunset as would never have ended but for some reason unknown to men, and to be marked with brighter colors than ordinary in the scroll of time. Though the shadows of the hills were beginning to steal over the stream, the whole river valley undulated with mild light, purer and more memorable than the noon. For so day bids farewell even to solitary vales uninhabited by man. Two herons (*Ardea herodias*), with their long and slender limbs relieved against the sky, were seen traveling high over our heads, — their lofty and silent flight, as they were wending their way at evening, surely not to alight in any marsh on the earth's surface, but, perchance, on the other side of our atmosphere, a symbol for the ages to study, whether impressed upon the sky or sculptured amid the hieroglyphics of Egypt. Bound to some northern meadow,

they held on their stately, stationary flight, like the storks in the picture, and disappeared at length behind the clouds. Dense flocks of blackbirds were winging their way along the river's course, as if on a short evening pilgrimage to some shrine of theirs, or to celebrate so fair a sunset.

"Therefore, as doth the pilgrim, whom the night
Hastes darkly to imprison on his way,
Think on thy home, my soul, and think aright
Of what's yet left thee of life's wasting day:
Thy sun posts westward, passed is thy morn,
And twice it is not given thee to be born."

The sun-setting presumed all men at leisure, and in a contemplative mood; but the farmer's boy only whistled the more thoughtfully as he drove his cows home from pasture, and the teamster refrained from cracking his whip, and guided his team with a subdued voice. The last vestiges of daylight at length disappeared, and as we rowed silently along with our backs toward home through the darkness, only a few stars being visible, we had little to say, but sat absorbed in thought, or in silence listened to the monotonous sound of our oars, a sort of rudimental music, suitable for the ear of Night and the acoustics of her dimly lighted halls;

"Pulsae referunt ad sidera valles,"

and the valleys echoed the sound to the stars.

As we looked up in silence to those distant lights, we were reminded that it was a rare imagination which first taught that the stars are worlds, and had conferred a great benefit on mankind. It is recorded in the

Chronicle of Bernaldez that in Columbus's first voyage the natives "pointed towards the heavens, making signs that they believed that there was all power and holiness." We have reason to be grateful for celestial phenomena, for they chiefly answer to the ideal in man. The stars are distant and unobtrusive, but bright and enduring as our fairest and most memorable experiences. "Let the immortal depth of your soul lead you, but earnestly extend your eyes upwards."

As the truest society approaches always nearer to solitude, so the most excellent speech finally falls into Silence. Silence is audible to all men, at all times, and in all places. She is when we hear inwardly, sound when we hear outwardly. Creation has not displaced her, but is her visible framework and foil. All sounds are her servants, and purveyors, proclaiming not only that their mistress is, but is a rare mistress, and earnestly to be sought after. They are so far akin to Silence that they are but bubbles on her surface, which straightway burst, an evidence of the strength and prolificness of the under-current; a faint utterance of Silence, and then only agreeable to our auditory nerves when they contrast themselves with and relieve the former. In proportion as they do this, and are heighteners and intensifiers of the Silence, they are harmony and purest melody.

Silence is the universal refuge, the sequel to all dull discourses and all foolish acts, a balm to our every chagrin, as welcome after satiety as after disappointment; that background which the painter may not

daub, be he master or bungler, and which, however awkward a figure we may have made in the foreground, remains ever our inviolable asylum, where no indignity can assail, no personality disturb us.

The orator puts off his individuality, and is then most eloquent when most silent. He listens while he speaks, and is a hearer along with his audience. Who has not hearkened to her infinite din? She is Truth's speaking-trumpet, the sole oracle, the true Delphi and Dodona, which kings and courtiers would do well to consult, nor will they be balked by an ambiguous answer. For through her all revelations have been made, and just in proportion as men have consulted her oracle within, they have obtained a clear insight, and their age has been marked as an enlightened one. But as often as they have gone gadding abroad to a strange Delphi and her mad priestess, their age has been dark and leaden. Such were garrulous and noisy eras, which no longer yield any sound, but the Grecian or silent and melodious era is ever sounding and resounding in the ears of men.

A good book is the plectrum with which our else silent lyres are struck. We not unfrequently refer the interest which belongs to our own unwritten sequel to the written and comparatively lifeless body of the work. Of all books this sequel is the most indispensable part. It should be the author's aim to say once and emphatically, "He said," ἔφη. This is the most the bookmaker can attain to. If he make his volume a mole whereon the waves of Silence may break, it is well.

It were vain for me to endeavor to interpret the Silence. She cannot be done into English. For six thousand years men have translated her with what fidelity belonged to each, and still she is little better than a sealed book. A man may run on confidently for a time, thinking he has her under his thumb, and shall one day exhaust her, but he too must at last be silent, and men remark only how brave a beginning he made; for when he at length dives into her, so vast is the disproportion of the told to the untold that the former will seem but the bubble on the surface where he disappeared. Nevertheless, we will go on, like those Chinese cliff swallows, feathering our nests with the froth which may one day be bread of life to such as dwell by the seashore.

We had made about fifty miles this day with sail and oar, and now, far in the evening, our boat was grating against the bulrushes of its native port, and its keel recognized the Concord mud, where some semblance of its outline was still preserved in the flattened flags which had scarce yet erected themselves since our departure; and we leaped gladly on shore, drawing it up and fastening it to the wild apple tree, whose stem still bore the mark which its chain had worn in the chafing of the spring freshets.

WALDEN

ECONOMY

WHEN I wrote the following pages, or rather the bulk of them, I lived alone, in the woods, a mile from any neighbor, in a house which I had built myself, on the shore of Walden Pond, in Concord, Massachusetts, and earned my living by the labor of my hands only. I lived there two years and two months. At present I am a sojourner in civilized life again.

I should not obtrude my affairs so much on the notice of my readers if very particular inquiries had not been made by my townsmen concerning my mode of life, which some would call impertinent, though they do not appear to me at all impertinent, but, considering the circumstances, very natural and pertinent. Some have asked what I got to eat; if I did not feel lonesome; if I was not afraid; and the like. Others have been curious to learn what portion of my income I devoted to charitable purposes; and some, who have large families, how many poor children I maintained. I will therefore ask those of my readers who feel no particular interest in me to pardon me if I undertake to answer some of these questions in this book. In most books, the *I*, or first person, is omitted; in this it will be retained; that, in respect to egotism, is the main difference. We commonly do not remember that it is, after all, always the first per-

son that is speaking. I should not talk so much about myself if there were anybody else whom I knew as well. Unfortunately, I am confined to this theme by the narrowness of my experience. Moreover, I, on my side, require of every writer, first or last, a simple and sincere account of his own life, and not merely what he has heard of other men's lives; some such account as he would send to his kindred from a distant land; for if he has lived sincerely, it must have been in a distant land to me. Perhaps these pages are more particularly addressed to poor students. As for the rest of my readers, they will accept such portions as apply to them. I trust that none will stretch the seams in putting on the coat, for it may do good service to him whom it fits.

I would fain say something, not so much concerning the Chinese and Sandwich Islanders as you who read these pages, who are said to live in New England; something about your condition, especially your outward condition or circumstances in this world, in this town, what it is, whether it is necessary that it be as bad as it is, whether it cannot be improved as well as not. I have travelled a good deal in Concord; and everywhere, in shops, and offices, and fields, the inhabitants have appeared to me to be doing penance in a thousand remarkable ways. What I have heard of Bramins sitting exposed to four fires and looking in the face of the sun; or hanging suspended, with their heads downward, over flames; or looking at the heavens over their shoulders "until it becomes impossible for them to resume their natural position, while from the twist of the neck nothing but liquids can pass into the stomach;" or dwelling,

chained for life, at the foot of a tree; or measuring with their bodies, like caterpillars, the breadth of vast empires; or standing on one leg on the tops of pillars, — even these forms of conscious penance are hardly more incredible and astonishing than the scenes which I daily witness. The twelve labors of Hercules were trifling in comparison with those which my neighbors have undertaken; for they were only twelve, and had an end; but I could never see that these men slew or captured any monster or finished any labor. They have no friend Iolaus to burn with a hot iron the root of the hydra's head, but as soon as one head is crushed, two spring up.

I see young men, my townsmen, whose misfortune it is to have inherited farms, houses, barns, cattle, and farming tools; for these are more easily acquired than got rid of. Better if they had been born in the open pasture and suckled by a wolf, that they might have seen with clearer eyes what field they were called to labor in. Who made them serfs of the soil? Why should they eat their sixty acres, when man is condemned to eat only his peck of dirt? Why should they begin digging their graves as soon as they are born? They have got to live a man's life, pushing all these things before them, and get on as well as they can. How many a poor immortal soul have I met well-nigh crushed and smothered under its load, creeping down the road of life, pushing before it a barn seventy-five feet by forty, its Augean stables never cleansed, and one hundred acres of land, tillage, mowing, pasture, and wood-lot! The portionless, who struggle with no such unnecessary inherited encumbrances,

find it labor enough to subdue and cultivate a few cubic feet of flesh.

But men labor under a mistake. The better part of the man is soon plowed into the soil for compost. By a seeming fate, commonly called necessity, they are employed, as it says in an old book, laying up treasures which moth and rust will corrupt and thieves break through and steal. It is a fool's life, as they will find when they get to the end of it, if not before. It is said that Deucalion and Pyrrha created men by throwing stones over their heads behind them: —

*Inde genus durum sumus, experiensque laborum,
Et documenta damus quâ simus origine nati.*

Or, as Raleigh rhymes it in his sonorous way, —

*“From thence our kind hard-hearted is, enduring pain and care,
Approving that our bodies of a stony nature are.”*

So much for a blind obedience to a blundering oracle, throwing the stones over their heads behind them, and not seeing where they fell.

Most men, even in this comparatively free country, through mere ignorance and mistake, are so occupied with the factitious cares and superfluously coarse labors of life that its finer fruits cannot be plucked by them. Their fingers, from excessive toil, are too clumsy and tremble too much for that. Actually, the laboring man has not leisure for a true integrity day by day; he cannot afford to sustain the manliest relations to men; his labor would be depreciated in the market. He has no time to be anything but a machine. How can he remember well his ignorance — which his growth requires —

who has so often to use his knowledge? We should feed and clothe him gratuitously sometimes, and recruit him with our cordials, before we judge of him. The finest qualities of our nature, like the bloom on fruits, can be preserved only by the most delicate handling. Yet we do not treat ourselves nor one another thus tenderly.

Some of you, we all know, are poor, find it hard to live, are sometimes, as it were, gasping for breath. I have no doubt that some of you who read this book are unable to pay for all the dinners which you have actually eaten, or for the coats and shoes which are fast wearing or are already worn out, and have come to this page to spend borrowed or stolen time, robbing your creditors of an hour. It is very evident what mean and sneaking lives many of you live, for my sight has been whetted by experience; always on the limits, trying to get into business and trying to get out of debt, a very ancient slough, called by the Latins *aes alienum*, another's brass, for some of their coins were made of brass; still living, and dying, and buried by this other's brass; always promising to pay, promising to pay, to-morrow, and dying to-day, insolvent; seeking to curry favor, to get custom, by how many modes, only not state-prison offences; lying, flattering, voting, contracting yourselves into a nutshell of civility, or dilating into an atmosphere of thin and vaporous generosity, that you may persuade your neighbor to let you make his shoes, or his hat, or his coat, or his carriage, or import his groceries for him; making yourselves sick, that you may lay up something against a sick day, something to be tucked away in an old chest, or in a stocking behind the plas-

tering, or, more safely, in the brick bank; no matter where, no matter how much or how little.

I sometimes wonder that we can be so frivolous, I may almost say, as to attend to the gross but somewhat foreign form of servitude called Negro Slavery, there are so many keen and subtle masters that enslave both North and South. It is hard to have a Southern overseer; it is worse to have a Northern one; but worst of all when you are the slave-driver of yourself. Talk of a divinity in man! Look at the teamster on the highway, wending to market by day or night; does any divinity stir within him? His highest duty to fodder and water his horses! What is his destiny to him compared with the shipping interests? Does not he drive for Squire Make-a-stir? How godlike, how immortal, is he? See how he cowers and sneaks, how vaguely all the day he fears, not being immortal nor divine, but the slave and prisoner of his own opinion of himself, a fame won by his own deeds. Public opinion is a weak tyrant compared with our own private opinion. What a man thinks of himself, that it is which determines, or rather indicates, his fate. Self-emancipation even in the West Indian provinces of the fancy and imagination, — what Wilberforce is there to bring that about? Think, also, of the ladies of the land weaving toilet cushions against the last day, not to betray too green an interest in their fates! As if you could kill time without injuring eternity.

The mass of men lead lives of quiet desperation. What is called resignation is confirmed desperation. From the desperate city you go into the desperate country, and have to console yourself with the bravery of minks and

muskrats. A stereotyped but unconscious despair is concealed even under what are called the games and amusements of mankind. There is no play in them, for this comes after work. But it is a characteristic of wisdom not to do desperate things.

When we consider what, to use the words of the catechism, is the chief end of man, and what are the true necessities and means of life, it appears as if men had deliberately chosen the common mode of living because they preferred it to any other. Yet they honestly think there is no choice left. But alert and healthy natures remember that the sun rose clear. It is never too late to give up our prejudices. No way of thinking or doing, however ancient, can be trusted without proof. What everybody echoes or in silence passes by as true to-day may turn out to be falsehood to-morrow, mere smoke of opinion, which some had trusted for a cloud that would sprinkle fertilizing rain on their fields. What old people say you cannot do, you try and find that you can. Old deeds for old people, and new deeds for new. Old people did not know enough once, perchance, to fetch fresh fuel to keep the fire a-going; new people put a little dry wood under a pot, and are whirled round the globe with the speed of birds, in a way to kill old people, as the phrase is. Age is no better, hardly so well, qualified for an instructor as youth, for it has not profited so much as it has lost. One may almost doubt if the wisest man has learned anything of absolute value by living. Practically, the old have no very important advice to give the young, their own experience has been so partial, and their lives have been such miserable failures, for private reasons,

as they must believe; and it may be that they have some faith left which belies that experience, and they are only less young than they were. I have lived some thirty years on this planet, and I have yet to hear the first syllable of valuable or even earnest advice from my seniors. They have told me nothing, and probably cannot tell me anything to the purpose. Here is life, an experiment to a great extent untried by me; but it does not avail me that they have tried it. If I have any experience which I think valuable, I am sure to reflect that this my Mentors said nothing about.

One farmer says to me, "You cannot live on vegetable food solely, for it furnishes nothing to make bones with;" and so he religiously devotes a part of his day to supplying his system with the raw material of bones; walking all the while he talks behind his oxen, which, with vegetable-made bones, jerk him and his lumbering plow along in spite of every obstacle. Some things are really necessities of life in some circles, the most helpless and diseased, which in others are luxuries merely, and in others still are entirely unknown.

The whole ground of human life seems to some to have been gone over by their predecessors, both the heights and the valleys, and all things to have been cared for. According to Evelyn, "the wise Solomon prescribed ordinances for the very distances of trees; and the Roman prætors have decided how often you may go into your neighbor's land to gather the acorns which fall on it without trespass, and what share belongs to that neighbor." Hippocrates has even left directions how we should cut our nails; that is, even with the ends of the fingers,

neither shorter nor longer. Undoubtedly the very tedium and ennui which presume to have exhausted the variety and the joys of life are as old as Adam. But man's capacities have never been measured; nor are we to judge of what he can do by any precedents, so little has been tried. Whatever have been thy failures hitherto, "be not afflicted, my child, for who shall assign to thee what thou hast left undone?"

We might try our lives by a thousand simple tests; as, for instance, that the same sun which ripens my beans illumines at once a system of earths like ours. If I had remembered this it would have prevented some mistakes. This was not the light in which I hoed them. The stars are the apexes of what wonderful triangles! What distant and different beings in the various mansions of the universe are contemplating the same one at the same moment! Nature and human life are as various as our several constitutions. Who shall say what prospect life offers to another? Could a greater miracle take place than for us to look through each other's eyes for an instant? We should live in all the ages of the world in an hour; ay, in all the worlds of the ages. History, Poetry, Mythology! — I know of no reading of another's experience so startling and informing as this would be.

The greater part of what my neighbors call good I believe in my soul to be bad, and if I repent of anything, it is very likely to be my good behavior. What demon possessed me that I behaved so well? You may say the wisest thing you can, old man, — you who have lived seventy years, not without honor of a kind, — I hear an irresistible voice which invites me away from all that.

One generation abandons the enterprises of another like stranded vessels.

I think that we may safely trust a good deal more than we do. We may waive just so much care of ourselves as we honestly bestow elsewhere. Nature is as well adapted to our weakness as to our strength. The incessant anxiety and strain of some is a well-nigh incurable form of disease. We are made to exaggerate the importance of what work we do; and yet how much is not done by us! or, what if we had been taken sick? How vigilant we are! determined not to live by faith if we can avoid it; all the day long on the alert, at night we unwillingly say our prayers and commit ourselves to uncertainties. So thoroughly and sincerely are we compelled to live, reverencing our life, and denying the possibility of change. This is the only way, we say; but there are as many ways as there can be drawn radii from one centre. All change is a miracle to contemplate; but it is a miracle which is taking place every instant. Confucius said, "To know that we know what we know, and that we do not know what we do not know, that is true knowledge." When one man has reduced a fact of the imagination to be a fact to his understanding, I foresee that all men will at length establish their lives on that basis.

Let us consider for a moment what most of the trouble and anxiety which I have referred to is about, and how much it is necessary that we be troubled, or at least careful. It would be some advantage to live a primitive and frontier life, though in the midst of an outward civilization, if only to learn what are the gross necessities of life and what methods have been taken to obtain them;

or even to look over the old day-books of the merchants, to see what it was that men most commonly bought at the stores, what they stored, that is, what are the grossest groceries. For the improvements of ages have had but little influence on the essential laws of man's existence: as our skeletons, probably, are not to be distinguished from those of our ancestors.

By the words, *necessary of life*, I mean whatever, of all that man obtains by his own exertions, has been from the first, or from long use has become, so important to human life that few, if any, whether from savageness, or poverty, or philosophy, ever attempt to do without it. To many creatures there is in this sense but one necessary of life, Food. To the bison of the prairie it is a few inches of palatable grass, with water to drink; unless he seeks the Shelter of the forest or the mountain's shadow. None of the brute creation requires more than Food and Shelter. The necessities of life for man in this climate may, accurately enough, be distributed under the several heads of Food, Shelter, Clothing, and Fuel; for not till we have secured these are we prepared to entertain the true problems of life with freedom and a prospect of success. Man has invented, not only houses, but clothes and cooked food; and possibly from the accidental discovery of the warmth of fire, and the consequent use of it, at first a luxury, arose the present necessity to sit by it. We observe cats and dogs acquiring the same second nature. By proper Shelter and Clothing we legitimately retain our own internal heat; but with an excess of these, or of Fuel, that is, with an external heat greater than our own internal, may not cookery

properly be said to begin? Darwin, the naturalist, says of the inhabitants of Tierra del Fuego, that while his own party, who were well clothed and sitting close to a fire, were far from too warm, these naked savages, who were farther off, were observed, to his great surprise, "to be streaming with perspiration at undergoing such a roasting." So, we are told, the New Hollander goes naked with impunity, while the European shivers in his clothes. Is it impossible to combine the hardiness of these savages with the intellectualness of the civilized man? According to Liebig, man's body is a stove, and food the fuel which keeps up the internal combustion in the lungs. In cold weather we eat more, in warm less. The animal heat is the result of a slow combustion, and disease and death take place when this is too rapid; or for want of fuel, or from some defect in the draught, the fire goes out. Of course the vital heat is not to be confounded with fire; but so much for analogy. It appears, therefore, from the above list, that the expression, *animal life*, is nearly synonymous with the expression, *animal heat*; for while Food may be regarded as the Fuel which keeps up the fire within us, — and Fuel serves only to prepare that Food or to increase the warmth of our bodies by addition from without, — Shelter and Clothing also serve only to retain the *heat* thus generated and absorbed.

The grand necessity, then, for our bodies, is to keep warm, to keep the vital heat in us. What pains we accordingly take, not only with our Food, and Clothing, and Shelter, but with our beds, which are our night-clothes, robbing the nests and breasts of birds to pre-

pare this shelter within a shelter, as the mole has its bed of grass and leaves at the end of its burrow! The poor man is wont to complain that this is a cold world; and to cold, no less physical than social, we refer directly a great part of our ills. The summer, in some climates, makes possible to man a sort of Elysian life. Fuel, except to cook his Food, is then unnecessary; the sun is his fire, and many of the fruits are sufficiently cooked by its rays; while Food generally is more various, and more easily obtained, and Clothing and Shelter are wholly or half unnecessary. At the present day, and in this country, as I find by my own experience, a few implements, a knife, an axe, a spade, a wheelbarrow, etc., and for the studious, lamplight, stationery, and access to a few books, rank next to necessities, and can all be obtained at a trifling cost. Yet some, not wise, go to the other side of the globe, to barbarous and unhealthy regions, and devote themselves to trade for ten or twenty years, in order that they may live, — that is, keep comfortably warm, — and die in New England at last. The luxuriously rich are not simply kept comfortably warm, but unnaturally hot; as I implied before, they are cooked, of course *à la mode*.

Most of the luxuries, and many of the so-called comforts of life, are not only not indispensable, but positive hindrances to the elevation of mankind. With respect to luxuries and comforts, the wisest have ever lived a more simple and meagre life than the poor. The ancient philosophers, Chinese, Hindoo, Persian, and Greek, were a class than which none has been poorer in outward riches, none so rich in inward. We know not much

about them. It is remarkable that *we* know so much of them as we do. The same is true of the more modern reformers and benefactors of their race. None can be an impartial or wise observer of human life but from the vantage ground of what *we* should call voluntary poverty. Of a life of luxury the fruit is luxury, whether in agriculture, or commerce, or literature, or art. There are nowadays professors of philosophy, but not philosophers. Yet it is admirable to profess because it was once admirable to live. To be a philosopher is not merely to have subtle thoughts, nor even to found a school, but so to love wisdom as to live according to its dictates, a life of simplicity, independence, magnanimity, and trust. It is to solve some of the problems of life, not only theoretically, but practically. The success of great scholars and thinkers is commonly a courtier-like success, not kingly, not manly. They make shift to live merely by conformity, practically as their fathers did, and are in no sense the progenitors of a nobler race of men. But why do men degenerate ever? What makes families run out? What is the nature of the luxury which enervates and destroys nations? Are we sure that there is none of it in our own lives? The philosopher is in advance of his age even in the outward form of his life. He is not fed, sheltered, clothed, warmed, like his contemporaries. How can a man be a philosopher and not maintain his vital heat by better methods than other men?

When a man is warmed by the several modes which I have described, what does he want next? Surely not more warmth of the same kind, as more and richer food, larger and more splendid houses, finer and more abur-

dant clothing, more numerous, incessant, and hotter fires, and the like. When he has obtained those things which are necessary to life, there is another alternative than to obtain the superfluities; and that is, to adventure on life now, his vacation from humbler toil having commenced. The soil, it appears, is suited to the seed, for it has sent its radicle downward, and it may now send its shoot upward also with confidence. Why has man rooted himself thus firmly in the earth, but that he may rise in the same proportion into the heavens above? — for the nobler plants are valued for the fruit they bear at last in the air and light, far from the ground, and are not treated like the humbler esculents, which, though they may be biennials, are cultivated only till they have perfected their root, and often cut down at top for this purpose, so that most would not know them in their flowering season.

I do not mean to prescribe rules to strong and valiant natures, who will mind their own affairs whether in heaven or hell, and perchance build more magnificently and spend more lavishly than the richest, without ever impoverishing themselves, not knowing how they live, — if, indeed, there are any such, as has been dreamed: nor to those who find their encouragement and inspiration in precisely the present condition of things, and cherish it with the fondness and enthusiasm of lovers, — and, to some extent, I reckon myself in this number; I do not speak to those who are well employed, in whatever circumstances, and they know whether they are well employed or not; — but mainly to the mass of men who are discontented, and idly complaining of the hard

ness of their lot or of the times, when they might improve them. There are some who complain most energetically and inconsolably of any, because they are, as they say, doing their duty. I also have in my mind that seemingly wealthy, but most terribly impoverished class of all, who have accumulated dross, but know not how to use it, or get rid of it, and thus have forged their own golden or silver fetters.

If I should attempt to tell how I have desired to spend my life in years past, it would probably surprise those of my readers who are somewhat acquainted with its actual history; it would certainly astonish those who know nothing about it. I will only hint at some of the enterprises which I have cherished.

In any weather, at any hour of the day or night, I have been anxious to improve the nick of time, and notch it on my stick too; to stand on the meeting of two eternities, the past and future, which is precisely the present moment; to toe that line. You will pardon some obscurities, for there are more secrets in my trade than in most men's, and yet not voluntarily kept, but inseparable from its very nature. I would gladly tell all that I know about it, and never paint "No Admittance" on my gate.

I long ago lost a hound, a bay horse, and a turtle-dove, and am still on their trail. Many are the travellers I have spoken concerning them, describing their tracks and what calls they answered to. I have met one or two who had heard the hound, and the tramp of the horse, and even seen the dove disappear behind a cloud, and

they seemed as anxious to recover them as if they had lost them themselves.

To anticipate, not the sunrise and the dawn merely, but, if possible, Nature herself! How many mornings, summer and winter, before yet any neighbor was stirring about his business, have I been about mine! No doubt, many of my townsmen have met me returning from this enterprise, farmers starting for Boston in the twilight, or woodchoppers going to their work. It is true, I never assisted the sun materially in his rising, but, doubt not, it was of the last importance only to be present at it.

So many autumn, ay, and winter days, spent outside the town, trying to hear what was in the wind, to hear and carry it express! I well-nigh sunk all my capital in it, and lost my own breath into the bargain, running in the face of it. If it had concerned either of the political parties, depend upon it, it would have appeared in the Gazette with the earliest intelligence. At other times watching from the observatory of some cliff or tree, to telegraph any new arrival; or waiting at evening on the hill-tops for the sky to fall, that I might catch something, though I never caught much, and that, manna-wise, would dissolve again in the sun.

For a long time I was reporter to a journal, of no very wide circulation, whose editor has never yet seen fit to print the bulk of my contributions, and, as is too common with writers, I got only my labor for my pains. However, in this case my pains were their own reward.

For many years I was self-appointed inspector of snow-storms and rain-storms, and did my duty faith-

fully; surveyor, if not of highways, then of forest paths and all across-lot routes, keeping them open, and ravines bridged and passable at all seasons, where the public heel had testified to their utility.

I have looked after the wild stock of the town, which give a faithful herdsman a good deal of trouble by leaping fences; and I have had an eye to the unfrequented nooks and corners of the farm; though I did not always know whether Jonas or Solomon worked in a particular field to-day; that was none of my business. I have watered the red huckleberry, the sand cherry and the nettle-tree, the red pine and the black ash, the white grape and the yellow violet, which might have withered else in dry seasons.

In short, I went on thus for a long time (I may say it without boasting), faithfully minding my business, till it became more and more evident that my townsmen would not after all admit me into the list of town officers, nor make my place a sinecure with a moderate allowance. My accounts, which I can swear to have kept faithfully, I have, indeed, never got audited, still less accepted, still less paid and settled. However, I have not set my heart on that.

Not long since, a strolling Indian went to sell baskets at the house of a well-known lawyer in my neighborhood. "Do you wish to buy any baskets?" he asked. "No, we do not want any," was the reply. "What!" exclaimed the Indian as he went out the gate, "do you mean to starve us?" Having seen his industrious white neighbors so well off, — that the lawyer had only to weave arguments, and, by some magic, wealth and stand-

ing followed, — he had said to himself: I will go into business; I will weave baskets; it is a thing which I can do. Thinking that when he had made the baskets he would have done his part, and then it would be the white man's to buy them. He had not discovered that it was necessary for him to make it worth the other's while to buy them, or at least make him think that it was so, or to make something else which it would be worth his while to buy. I too had woven a kind of basket of a delicate texture, but I had not made it worth any one's while to buy them. Yet not the less, in my case, did I think it worth my while to weave them, and instead of studying how to make it worth men's while to buy my baskets, I studied rather how to avoid the necessity of selling them. The life which men praise and regard as successful is but one kind. Why should we exaggerate any one kind at the expense of the others?

Finding that my fellow-citizens were not likely to offer me any room in the court house, or any curacy or living anywhere else, but I must shift for myself, I turned my face more exclusively than ever to the woods, where I was better known. I determined to go into business at once, and not wait to acquire the usual capital, using such slender means as I had already got. My purpose in going to Walden Pond was not to live cheaply nor to live dearly there, but to transact some private business with the fewest obstacles; to be hindered from accomplishing which for want of a little common sense, a little enterprise and business talent, appeared not so sad as foolish.

I have always endeavored to acquire strict business

habits; they are indispensable to every man. If your trade is with the Celestial Empire, then some small counting house on the coast, in some Salem harbor, will be fixture enough. You will export such articles as the country affords, purely native products, much ice and pine timber and a little granite, always in native bottoms. These will be good ventures. To oversee all the details yourself in person; to be at once pilot and captain, and owner and underwriter; to buy and sell and keep the accounts; to read every letter received, and write or read every letter sent; to superintend the discharge of imports night and day; to be upon many parts of the coast almost at the same time, — often the richest freight will be discharged upon a Jersey shore; — to be your own telegraph, unweariedly sweeping the horizon, speaking all passing vessels bound coastwise; to keep up a steady despatch of commodities, for the supply of such a distant and exorbitant market; to keep yourself informed of the state of the markets, prospects of war and peace everywhere, and anticipate the tendencies of trade and civilization, — taking advantage of the results of all exploring expeditions, using new passages and all improvements in navigation; — charts to be studied, the position of reefs and new lights and buoys to be ascertained, and ever, and ever, the logarithmic tables to be corrected, for by the error of some calculator the vessel often splits upon a rock that should have reached a friendly pier, — there is the untold fate of *La Pérouse*; — universal science to be kept pace with, studying the lives of all great discoverers and navigators, great adventurers and merchants, from

Hanno and the Phœnicians down to our day; in fine, account of stock to be taken from time to time, to know how you stand. It is a labor to task the faculties of a man, — such problems of profit and loss, of interest, of tare and tret, and gauging of all kinds in it, as demand a universal knowledge.

I have thought that Walden Pond would be a good place for business, not solely on account of the railroad and the ice trade; it offers advantages which it may not be good policy to divulge; it is a good port and a good foundation. No Neva marshes to be filled; though you must everywhere build on piles of your own driving. It is said that a flood-tide, with a westerly wind, and ice in the Neva, would sweep St. Petersburg from the face of the earth.

As this business was to be entered into without the usual capital, it may not be easy to conjecture where those means, that will still be indispensable to every such undertaking, were to be obtained. As for Clothing, to come at once to the practical part of the question, perhaps we are led oftener by the love of novelty and a regard for the opinions of men, in procuring it, than by a true utility. Let him who has work to do recollect that the object of clothing is, first, to retain the vital heat, and secondly, in this state of society, to cover nakedness, and he may judge how much of any necessary or important work may be accomplished without adding to his wardrobe. Kings and queens who wear a suit but once, though made by some tailor or dressmaker to their majesties, cannot know the comfort of wearing a suit that fits. They are no better than wooden horses to

hang the clean clothes on. Every day our garments become more assimilated to ourselves, receiving the impress of the wearer's character, until we hesitate to lay them aside without such delay and medical appliances and some such solemnity even as our bodies. No man ever stood the lower in my estimation for having a patch in his clothes; yet I am sure that there is greater anxiety, commonly, to have fashionable, or at least clean and unpatched clothes, than to have a sound conscience. But even if the rent is not mended, perhaps the worst vice betrayed is improvidence. I sometimes try my acquaintances by such tests as this, — Who could wear a patch, or two extra seams only, over the knee? Most behave as if they believed that their prospects for life would be ruined if they should do it. It would be easier for them to hobble to town with a broken leg than with a broken pantaloons. Often if an accident happens to a gentleman's legs, they can be mended; but if a similar accident happens to the legs of his pantaloons, there is no help for it; for he considers, not what is truly respectable, but what is respected. We know but few men, a great many coats and breeches. Dress a scarecrow in your last shift, you standing shiftless by, who would not soonest salute the scarecrow? Passing a cornfield the other day, close by a hat and coat on a stake, I recognized the owner of the farm. He was only a little more weather-beaten than when I saw him last. I have heard of a dog that barked at every stranger who approached his master's premises with clothes on, but was easily quieted by a naked thief. It is an interesting question how far men would retain their relative rank

if they were divested of their clothes. Could you, in such a case, tell surely of any company of civilized men which belonged to the most respected class? When Madam Pfeiffer, in her adventurous travels round the world, from east to west, had got so near home as Asiatic Russia, she says that she felt the necessity of wearing other than a travelling dress, when she went to meet the authorities, for she "was now in a civilized country, where . . . people are judged of by their clothes." Even in our democratic New England towns the accidental possession of wealth, and its manifestation in dress and equipage alone, obtain for the possessor almost universal respect. But they who yield such respect, numerous as they are, are so far heathen, and need to have a missionary sent to them. Beside, clothes introduced sewing, a kind of work which you may call endless; a woman's dress, at least, is never done.

A man who has at length found something to do will not need to get a new suit to do it in; for him the old will do, that has lain dusty in the garret for an indeterminate period. Old shoes will serve a hero longer than they have served his valet, — if a hero ever has a valet, — bare feet are older than shoes, and he can make them do. Only they who go to soirées and legislative halls must have new coats, coats to change as often as the man changes in them. But if my jacket and trousers, my hat and shoes, are fit to worship God in, they will do; will they not? Who ever saw his old clothes, — his old coat, actually worn out, resolved into its primitive elements, so that it was not a deed of charity to bestow it on some poor boy, by him perchance to be bestowed

on some poorer still, or shall we say richer, who could do with less? I say, beware of all enterprises that require new clothes, and not rather a new wearer of clothes. If there is not a new man, how can the new clothes be made to fit? If you have any enterprise before you, try it in your old clothes. All men want, not something to *do with*, but something to *do*, or rather something to *be*. Perhaps we should never procure a new suit, however ragged or dirty the old, until we have so conducted, so enterprised or sailed in some way, that we feel like new men in the old, and that to retain it would be like keeping new wine in old bottles. Our moulting season, like that of the fowls, must be a crisis in our lives. The loon retires to solitary ponds to spend it. Thus also the snake casts its slough, and the caterpillar its wormy coat, by an internal industry and expansion; for clothes are but our outmost cuticle and mortal coil. Otherwise we shall be found sailing under false colors, and be inevitably cashiered at last by our own opinion, as well as that of mankind.

We don garment after garment, as if we grew like exogenous plants by addition without. Our outside and often thin and fanciful clothes are our epidermis, or false skin, which partakes not of our life, and may be stripped off here and there without fatal injury; our thicker garments, constantly worn, are our cellular integument, or cortex; but our shirts are our liber, or true bark, which cannot be removed without girdling and so destroying the man. I believe that all races at some seasons wear something equivalent to the shirt. It is desirable that a man be clad so simply that he can lay

his hands on himself in the dark, and that he live in all respects so compactly and preparedly that, if an enemy take the town, he can, like the old philosopher, walk out the gate empty-handed without anxiety. While one thick garment is, for most purposes, as good as three thin ones, and cheap clothing can be obtained at prices really to suit customers; while a thick coat can be bought for five dollars, which will last as many years, thick pantaloons for two dollars, cowhide boots for a dollar and a half a pair, a summer hat for a quarter of a dollar, and a winter cap for sixty-two and a half cents, or a better be made at home at a nominal cost, where is he so poor that, clad in such a suit, *of his own earning*, there will not be found wise men to do him reverence?

When I ask for a garment of a particular form, my tailoress tells me gravely, "They do not make them so now," not emphasizing the "They" at all, as if she quoted an authority as impersonal as the Fates, and I find it difficult to get made what I want, simply because she cannot believe that I mean what I say, that I am so rash. When I hear this oracular sentence, I am for a moment absorbed in thought, emphasizing to myself each word separately that I may come at the meaning of it, that I may find out by what degree of consanguinity *They* are related to *me*, and what authority they may have in an affair which affects me so nearly; and, finally, I am inclined to answer her with equal mystery, and without any more emphasis of the "they," — "It is true, they did not make them so recently, but they do now." Of what use this measuring of me if she does not measure my character, but only the breadth of my

shoulders, as it were a peg to hang the coat on? We worship not the Graces, nor the Parcæ, but Fashion. She spins and weaves and cuts with full authority. The head monkey at Paris puts on a traveller's cap, and all the monkeys in America do the same. I sometimes despair of getting anything quite simple and honest done in this world by the help of men. They would have to be passed through a powerful press first, to squeeze their old notions out of them, so that they would not soon get upon their legs again; and then there would be some one in the company with a maggot in his head, hatched from an egg deposited there nobody knows when, for not even fire kills these things, and you would have lost your labor. Nevertheless, we will not forget that some Egyptian wheat was handed down to us by a mummy.

On the whole, I think that it cannot be maintained that dressing has in this or any country risen to the dignity of an art. At present men make shift to wear what they can get. Like shipwrecked sailors, they put on what they can find on the beach, and at a little distance, whether of space or time, laugh at each other's masquerade. Every generation laughs at the old fashions, but follows religiously the new. We are amused at beholding the costume of Henry VIII., or Queen Elizabeth, as much as if it was that of the King and Queen of the Cannibal Islands. All costume off a man is pitiful or grotesque. It is only the serious eye peering from and the sincere life passed within it which restrain laughter and consecrate the costume of any people. Let Harlequin be taken with a fit of the colic and his trappings will have to serve that mood too. When the

soldier is hit by a cannon-ball, rags are as becoming as purple.

The childish and savage taste of men and women for new patterns keeps how many shaking and squinting through kaleidoscopes that they may discover the particular figure which this generation requires to-day. The manufacturers have learned that this taste is merely whimsical. Of two patterns which differ only by a few threads more or less of a particular color, the one will be sold readily, the other lie on the shelf, though it frequently happens that after the lapse of a season the latter becomes the most fashionable. Comparatively, tattooing is not the hideous custom which it is called. It is not barbarous merely because the printing is skin-deep and unalterable.

I cannot believe that our factory system is the best mode by which men may get clothing. The condition of the operatives is becoming every day more like that of the English; and it cannot be wondered at, since, as far as I have heard or observed, the principal object is, not that mankind may be well and honestly clad, but, unquestionably, that the corporations may be enriched. In the long run men hit only what they aim at. Therefore, though they should fail immediately, they had better aim at something high.

As for a Shelter, I will not deny that this is now a necessary of life, though there are instances of men having done without it for long periods in colder countries than this. Samuel Laing says that "the Laplander in his skin dress, and in a skin bag which he puts over his head and shoulders, will sleep night after night on the

snow . . . in a degree of cold which would extinguish the life of one exposed to it in any woollen clothing." He had seen them asleep thus. Yet he adds, "They are not hardier than other people." But, probably, man did not live long on the earth without discovering the convenience which there is in a house, the domestic comforts, which phrase may have originally signified the satisfactions of the house more than of the family; though these must be extremely partial and occasional in those climates where the house is associated in our thoughts with winter or the rainy season chiefly, and two thirds of the year, except for a parasol, is unnecessary. In our climate, in the summer, it was formerly almost solely a covering at night. In the Indian gazettes a wigwam was the symbol of a day's march, and a row of them cut or painted on the bark of a tree signified that so many times they had camped. Man was not made so large limbed and robust but that he must seek to narrow his world, and wall in a space such as fitted him. He was at first bare and out of doors; but though this was pleasant enough in serene and warm weather, by daylight, the rainy season and the winter, to say nothing of the torrid sun, would perhaps have nipped his race in the bud if he had not made haste to clothe himself with the shelter of a house. Adam and Eve, according to the fable, wore the bower before other clothes. Man wanted a home, a place of warmth, or comfort, first of physical warmth, then the warmth of the affections.

We may imagine a time when, in the infancy of the human race, some enterprising mortal crept into a hollow in a rock for shelter. Every child begins the world

again, to some extent, and loves to stay outdoors, even in wet and cold. It plays house, as well as horse, having an instinct for it. Who does not remember the interest with which, when young, he looked at shelving rocks, or any approach to a cave? It was the natural yearning of that portion of our most primitive ancestor which still survived in us. From the cave we have advanced to roofs of palm leaves, of bark and boughs, of linen woven and stretched, of grass and straw, of boards and shingles, of stones and tiles. At last, we know not what it is to live in the open air, and our lives are domestic in more senses than we think. From the hearth the field is a great distance. It would be well, perhaps, if we were to spend more of our days and nights without any obstruction between us and the celestial bodies, if the poet did not speak so much from under a roof, or the saint dwell there so long. Birds do not sing in caves, nor do doves cherish their innocence in dovecots.

However, if one designs to construct a dwelling-house, it behooves him to exercise a little Yankee shrewdness, lest after all he find himself in a workhouse, a labyrinth without a clue, a museum, an almshouse, a prison, or a splendid mausoleum instead. Consider first how slight a shelter is absolutely necessary. I have seen Penobscot Indians, in this town, living in tents of thin cotton cloth, while the snow was nearly a foot deep around them, and I thought that they would be glad to have it deeper to keep out the wind. Formerly, when how to get my living honestly, with freedom left for my proper pursuits, was a question which vexed me even more than it does now, for unfortunately I am become somewhat callous,

I used to see a large box by the railroad, six feet long by three wide, in which the laborers locked up their tools at night; and it suggested to me that every man who was hard pushed might get such a one for a dollar, and, having bored a few auger holes in it, to admit the air at least, get into it when it rained and at night, and hook down the lid, and so have freedom in his love, and in his soul be free. This did not appear the worst, nor by any means a despicable alternative. You could sit up as late as you pleased, and, whenever you got up, go abroad without any landlord or house-lord dogging you for rent. Many a man is harassed to death to pay the rent of a larger and more luxurious box who would not have frozen to death in such a box as this. I am far from jesting. Economy is a subject which admits of being treated with levity, but it cannot so be disposed of. A comfortable house for a rude and hardy race, that lived mostly out of doors, was once made here almost entirely of such materials as Nature furnished ready to their hands. Gookin, who was superintendent of the Indians subject to the Massachusetts Colony, writing in 1674, says, "The best of their houses are covered very neatly, tight and warm, with barks of trees, slipped from their bodies at those seasons when the sap is up, and made into great flakes, with pressure of weighty timber, when they are green. . . . The meaner sort are covered with mats which they make of a kind of bulrush, and are also indifferently tight and warm, but not so good as the former. . . . Some I have seen, sixty or a hundred feet long and thirty feet broad. . . . I have often lodged in their wigwams, and found them

as warm as the best English houses." He adds that they were commonly carpeted and lined within with well-wrought embroidered mats, and were furnished with various utensils. The Indians had advanced so far as to regulate the effect of the wind by a mat suspended over the hole in the roof and moved by a string. Such a lodge was in the first instance constructed in a day or two at most, and taken down and put up in a few hours; and every family owned one, or its apartment in one.

In the savage state every family owns a shelter as good as the best, and sufficient for its coarser and simpler wants; but I think that I speak within bounds when I say that, though the birds of the air have their nests, and the foxes their holes, and the savages their wigwams, in modern civilized society not more than one half the families own a shelter. In the large towns and cities, where civilization especially prevails, the number of those who own a shelter is a very small fraction of the whole. The rest pay an annual tax for this outside garment of all, become indispensable summer and winter, which would buy a village of Indian wigwams, but now helps to keep them poor as long as they live. I do not mean to insist here on the disadvantage of hiring compared with owning, but it is evident that the savage owns his shelter because it costs so little, while the civilized man hires his commonly because he cannot afford to own it; nor can he, in the long run, any better afford to hire. But, answers one, by merely paying this tax the poor civilized man secures an abode which is a palace compared with the savage's. An annual rent of from twenty-five to a hundred dollars (these are the

country rates) entitles him to the benefit of the improvements of centuries, spacious apartments, clean paint and paper, Rumford fireplace, back plastering, Venetian blinds, copper pump, spring lock, a commodious cellar, and many other things. But how happens it that he who is said to enjoy these things is so commonly a *poor* civilized man, while the savage, who has them not, is rich as a savage? If it is asserted that civilization is a real advance in the condition of man, — and I think that it is, though only the wise improve their advantages, — it must be shown that it has produced better dwellings without making them more costly; and the cost of a thing is the amount of what I will call life which is required to be exchanged for it, immediately or in the long run. An average house in this neighborhood costs perhaps eight hundred dollars, and to lay up this sum will take from ten to fifteen years of the laborer's life, even if he is not encumbered with a family, — estimating the pecuniary value of every man's labor at one dollar a day, for if some receive more, others receive less; — so that he must have spent more than half his life commonly before *his* wigwam will be earned. If we suppose him to pay a rent instead, this is but a doubtful choice of evils. Would the savage have been wise to exchange his wigwam for a palace on these terms?

It may be guessed that I reduce almost the whole advantage of holding this superfluous property as a fund in store against the future, so far as the individual is concerned, mainly to the defraying of funeral expenses. But perhaps a man is not required to bury himself. Nevertheless this points to an important distinction be-

tween the civilized man and the savage; and, no doubt, they have designs on us for our benefit, in making the life of a civilized people an *institution*, in which the life of the individual is to a great extent absorbed, in order to preserve and perfect that of the race. But I wish to show at what a sacrifice this advantage is at present obtained, and to suggest that we may possibly so live as to secure all the advantage without suffering any of the disadvantage. What mean ye by saying that the poor ye have always with you, or that the fathers have eaten sour grapes, and the children's teeth are set on edge?

“As I live, saith the Lord God, ye shall not have occasion any more to use this proverb in Israel.

“Behold all souls are mine; as the soul of the father, so also the soul of the son is mine: the soul that sinneth, it shall die.”

When I consider my neighbors, the farmers of Concord, who are at least as well off as the other classes, I find that for the most part they have been toiling twenty, thirty, or forty years, that they may become the real owners of their farms, which commonly they have inherited with encumbrances, or else bought with hired money, — and we may regard one third of that toil as the cost of their houses, — but commonly they have not paid for them yet. It is true, the encumbrances sometimes outweigh the value of the farm, so that the farm itself becomes one great encumbrance, and still a man is found to inherit it, being well acquainted with it, as he says. On applying to the assessors, I am surprised to learn that they cannot at once name a dozen in

the town who own their farms free and clear. If you would know the history of these homesteads, inquire at the bank where they are mortgaged. The man who has actually paid for his farm with labor on it is so rare that every neighbor can point to him. I doubt if there are three such men in Concord. What has been said of the merchants, that a very large majority, even ninety-seven in a hundred, are sure to fail, is equally true of the farmers. With regard to the merchants, however, one of them says pertinently that a great part of their failures are not genuine pecuniary failures, but merely failures to fulfil their engagements, because it is inconvenient; that is, it is the moral character that breaks down. But this puts an infinitely worse face on the matter, and suggests, beside, that probably not even the other three succeed in saving their souls, but are perchance bankrupt in a worse sense than they who fail honestly. Bankruptcy and repudiation are the springboards from which much of our civilization vaults and turns its somersets, but the savage stands on the unelastic plank of famine. Yet the Middlesex Cattle Show goes off here with *éclat* annually, as if all the joints of the agricultural machine were suent.

The farmer is endeavoring to solve the problem of a livelihood by a formula more complicated than the problem itself. To get his shoestrings he speculates in herds of cattle. With consummate skill he has set his trap with a hair springe to catch comfort and independence, and then, as he turned away, got his own leg into it. This is the reason he is poor; and for a similar reason we are all poor in respect to a thousand savage

comforts, though surrounded by luxuries. As Chapman sings, —

“The false society of men —
— for earthly greatness
All heavenly comforts rarefies to air.”

And when the farmer has got his house, he may not be the richer but the poorer for it, and it be the house that has got him. As I understand it, that was a valid objection urged by Momus against the house which Minerva made, that she “had not made it movable, by which means a bad neighborhood might be avoided;” and it may still be urged, for our houses are such unwieldy property that we are often imprisoned rather than housed in them; and the bad neighborhood to be avoided is our own scurvy selves. I know one or two families, at least, in this town, who, for nearly a generation, have been wishing to sell their houses in the outskirts and move into the village, but have not been able to accomplish it, and only death will set them free.

Granted that the *majority* are able at last either to own or hire the modern house with all its improvements. While civilization has been improving our houses, it has not equally improved the men who are to inhabit them. It has created palaces, but it was not so easy to create noblemen and kings. And *if the civilized man's pursuits are no worthier than the savage's, if he is employed the greater part of his life in obtaining gross necessities and comforts merely, why should he have a better dwelling than the former?*

But how do the poor *minority* fare? Perhaps it will be found that just in proportion as some have been

placed in outward circumstances above the savage, others have been degraded below him. The luxury of one class is counterbalanced by the indigence of another. On the one side is the palace, on the other are the almshouse and "silent poor." The myriads who built the pyramids to be the tombs of the Pharaohs were fed on garlic, and it may be were not decently buried themselves. The mason who finishes the cornice of the palace returns at night perchance to a hut not so good as a wigwam. It is a mistake to suppose that, in a country where the usual evidences of civilization exist, the condition of a very large body of the inhabitants may not be as degraded as that of savages. I refer to the degraded poor, not now to the degraded rich. To know this I should not need to look farther than to the shanties which everywhere border our railroads, that last improvement in civilization; where I see in my daily walks human beings living in sties, and all winter with an open door, for the sake of light, without any visible, often imaginable, wood-pile, and the forms of both old and young are permanently contracted by the long habit of shrinking from cold and misery, and the development of all their limbs and faculties is checked. It certainly is fair to look at that class by whose labor the works which distinguish this generation are accomplished. Such too, to a greater or less extent, is the condition of the operatives of every denomination in England, which is the great workhouse of the world. Or I could refer you to Ireland, which is marked as one of the white or enlightened spots on the map. Contrast the physical condition of the Irish with that of the North

American Indian, or the South Sea Islander, or any other savage race before it was degraded by contact with the civilized man. Yet I have no doubt that that people's rulers are as wise as the average of civilized rulers. Their condition only proves what squalidness may consist with civilization. I hardly need refer now to the laborers in our Southern States who produce the staple exports of this country, and are themselves a staple production of the South. But to confine myself to those who are said to be in *moderate* circumstances.

Most men appear never to have considered what a house is, and are actually though needlessly poor all their lives because they think that they must have such a one as their neighbors have. As if one were to wear any sort of coat which the tailor might cut out for him, or, gradually leaving off palm-leaf hat or cap of wood-chuck skin, complain of hard times because he could not afford to buy him a crown! It is possible to invent a house still more convenient and luxurious than we have, which yet all would admit that man could not afford to pay for. Shall we always study to obtain more of these things, and not sometimes to be content with less? Shall the respectable citizen thus gravely teach, by precept and example, the necessity of the young man's providing a certain number of superfluous glow-shoes, and umbrellas, and empty guest chambers for empty guests, before he dies? Why should not our furniture be as simple as the Arab's or the Indian's? When I think of the benefactors of the race, whom we have apotheosized as messengers from heaven, bearers of divine gifts to man, I do not see in my mind any reti-

nue at their heels, any carload of fashionable furniture. Or what if I were to allow — would it not be a singular allowance? — that our furniture should be more complex than the Arab's, in proportion as we are morally and intellectually his superiors! At present our houses are cluttered and defiled with it, and a good housewife would sweep out the greater part into the dust hole, and not leave her morning's work undone. Morning work! By the blushes of Aurora and the music of Memnon, what should be man's *morning work* in this world? I had three pieces of limestone on my desk, but I was terrified to find that they required to be dusted daily, when the furniture of my mind was all undusted still, and I threw them out the window in disgust. How, then, could I have a furnished house? I would rather sit in the open air, for no dust gathers on the grass, unless where man has broken ground.

It is the luxurious and dissipated who set the fashions which the herd so diligently follow. The traveller who stops at the best houses, so called, soon discovers this, for the publicans presume him to be a Sardanapalus, and if he resigned himself to their tender mercies he would soon be completely emasculated. I think that in the railroad car we are inclined to spend more on luxury than on safety and convenience, and it threatens without attaining these to become no better than a modern drawing-room, with its divans, and ottomans, and sunshades, and a hundred other oriental things, which we are taking west with us, invented for the ladies of the harem and the effeminate natives of the Celestial Empire, which Jonathan should be ashamed to know the

names of. I would rather sit on a pumpkin and have it all to myself than be crowded on a velvet cushion. I would rather ride on earth in an ox cart, with a free circulation, than go to heaven in the fancy car of an excursion train and breathe a *malaria* all the way.

The very simplicity and nakedness of man's life in the primitive ages imply this advantage, at least, that they left him still but a sojourner in nature. When he was refreshed with food and sleep, he contemplated his journey again. He dwelt, as it were, in a tent in this world, and was either threading the valleys, or crossing the plains, or climbing the mountain-tops. But lo! men have become the tools of their tools. The man who independently plucked the fruits when he was hungry is become a farmer; and he who stood under a tree for shelter, a housekeeper. We now no longer camp as for a night, but have settled down on earth and forgotten heaven. We have adopted Christianity merely as an improved method of *agri-culture*. We have built for this world a family mansion, and for the next a family tomb. The best works of art are the expression of man's struggle to free himself from this condition, but the effect of our art is merely to make this low state comfortable and that higher state to be forgotten. There is actually no place in this village for a work of *fine* art, if any had come down to us, to stand, for our lives, our houses and streets, furnish no proper pedestal for it. There is not a nail to hang a picture on, nor a shelf to receive the bust of a hero or a saint. When I consider how our houses are built and paid for, or not paid for, and their internal economy managed and sustained, I

wonder that the floor does not give way under the visitor while he is admiring the gewgaws upon the mantel-piece, and let him through into the cellar, to some solid and honest though earthy foundation. I cannot but perceive that this so-called rich and refined life is a thing jumped at, and I do not get on in the enjoyment of the *fine* arts which adorn it, my attention being wholly occupied with the jump; for I remember that the greatest genuine leap, due to human muscles alone, on record, is that of certain wandering Arabs, who are said to have cleared twenty-five feet on level ground. Without factitious support, man is sure to come to earth again beyond that distance. The first question which I am tempted to put to the proprietor of such great impropriety is, Who bolsters you? Are you one of the ninety-seven who fail, or the three who succeed? Answer me these questions, and then perhaps I may look at your bawbles and find them ornamental. The cart before the horse is neither beautiful nor useful. Before we can adorn our houses with beautiful objects the walls must be stripped, and our lives must be stripped, and beautiful housekeeping and beautiful living be laid for a foundation: now, a taste for the beautiful is most cultivated out of doors, where there is no house and no housekeeper.

Old Johnson, in his "Wonder-Working Providence," speaking of the first settlers of this town, with whom he was contemporary, tells us that "they burrow themselves in the earth for their first shelter under some hill-side, and, casting the soil aloft upon timber, they make a smoky fire against the earth, at the highest side." They

did not "provide them houses," says he, "till the earth, by the Lord's blessing, brought forth bread to feed them," and the first year's crop was so light that "they were forced to cut their bread very thin for a long season." The secretary of the Province of New Netherland, writing in Dutch, in 1650, for the information of those who wished to take up land there, states more particularly that "those in New Netherland, and especially in New England, who have no means to build farm-houses at first according to their wishes, dig a square pit in the ground, cellar fashion, six or seven feet deep, as long and as broad as they think proper, case the earth inside with wood all round the wall, and line the wood with the bark of trees or something else to prevent the caving in of the earth; floor this cellar with plank, and wainscot it overhead for a ceiling, raise a roof of spars clear up, and cover the spars with bark or green sods, so that they can live dry and warm in these houses with their entire families for two, three, and four years, it being understood that partitions are run through those cellars which are adapted to the size of the family. The wealthy and principal men in New England, in the beginning of the colonies, commenced their first dwelling-houses in this fashion for two reasons: firstly, in order not to waste time in building, and not to want food the next season; secondly, in order not to discourage poor laboring people whom they brought over in numbers from Fatherland. In the course of three or four years, when the country became adapted to agriculture, they built themselves handsome houses, spending on them several thousands."

In this course which our ancestors took there was a show of prudence at least, as if their principle were to satisfy the more pressing wants first. But are the more pressing wants satisfied now? When I think of acquiring for myself one of our luxurious dwellings, I am deterred, for, so to speak, the country is not yet adapted to *human* culture, and we are still forced to cut our *spiritual* bread far thinner than our forefathers did their wheaten. Not that all architectural ornament is to be neglected even in the rudest periods; but let our houses first be lined with beauty, where they come in contact with our lives, like the tenement of the shellfish, and not overlaid with it. But, alas! I have been inside one or two of them, and know what they are lined with.

Though we are not so degenerate but that we might possibly live in a cave or a wigwam or wear skins to-day, it certainly is better to accept the advantages, though so dearly bought, which the invention and industry of mankind offer. In such a neighborhood as this, boards and shingles, lime and bricks, are cheaper and more easily obtained than suitable caves, or whole logs, or bark in sufficient quantities, or even well-tempered clay or flat stones. I speak understandingly on this subject, for I have made myself acquainted with it both theoretically and practically. With a little more wit we might use these materials so as to become richer than the richest now are, and make our civilization a blessing. The civilized man is a more experienced and wiser savage. But to make haste to my own experiment.

Near the end of March, 1845, I borrowed an axe and went down to the woods by Walden Pond, nearest to where I intended to build my house, and began to cut down some tall, arrowy white pines, still in their youth, for timber. It is difficult to begin without borrowing, but perhaps it is the most generous course thus to permit your fellow-men to have an interest in your enterprise. The owner of the axe, as he released his hold on it, said that it was the apple of his eye; but I returned it sharper than I received it. It was a pleasant hillside where I worked, covered with pine woods, through which I looked out on the pond, and a small open field in the woods where pines and hickories were springing up. The ice in the pond was not yet dissolved, though there were some open spaces, and it was all dark-colored and saturated with water. There were some slight flurries of snow during the days that I worked there; but for the most part when I came out on to the railroad, on my way home, its yellow sand-heap stretched away gleaming in the hazy atmosphere, and the rails shone in the spring sun, and I heard the lark and pewee and other birds already come to commence another year with us. They were pleasant spring days, in which the winter of man's discontent was thawing as well as the earth, and the life that had lain torpid began to stretch itself. One day, when my axe had come off and I had cut a green hickory for a wedge, driving it with a stone, and had placed the whole to soak in a pond-hole in order to swell the wood, I saw a striped snake run into the water, and he lay on the bottom, apparently without inconvenience, as long as I stayed there, or more than

a quarter of an hour; perhaps because he had not yet fairly come out of the torpid state. It appeared to me that for a like reason men remain in their present low and primitive condition; but if they should feel the influence of the spring of springs arousing them, they would of necessity rise to a higher and more ethereal life. I had previously seen the snakes in frosty mornings in my path with portions of their bodies still numb and inflexible, waiting for the sun to thaw them. On the 1st of April it rained and melted the ice, and in the early part of the day, which was very foggy, I heard a stray goose groping about over the pond and cackling as if lost, or like the spirit of the fog.

So I went on for some days cutting and hewing timber, and also studs and rafters, all with my narrow axe, not having many communicable or scholar-like thoughts singing to myself, —

Men say they know many things;
But lo! they have taken wings, —
The arts and sciences,
And a thousand appliances:
The wind that blows
Is all that anybody knows.

I hewed the main timbers six inches square, most of the studs on two sides only, and the rafters and floor timbers on one side, leaving the rest of the bark on, so that they were just as straight and much stronger than sawed ones. Each stick was carefully mortised or tenoned by its stump, for I had borrowed other tools by this time. My days in the woods were not very long ones; yet I usually carried my dinner of bread and butter, and read

the newspaper in which it was wrapped, at noon, sitting amid the green pine boughs which I had cut off, and to my bread was imparted some of their fragrance, for my hands were covered with a thick coat of pitch. Before I had done I was more the friend than the foe of the pine tree, though I had cut down some of them, having become better acquainted with it. Sometimes a rambler in the wood was attracted by the sound of my axe, and we chatted pleasantly over the chips which I had made.

By the middle of April, for I made no haste in my work, but rather made the most of it, my house was framed and ready for the raising. I had already bought the shanty of James Collins, an Irishman who worked on the Fitchburg Railroad, for boards. James Collins' shanty was considered an uncommonly fine one. When I called to see it he was not at home. I walked about the outside, at first unobserved from within, the window was so deep and high. It was of small dimensions, with a peaked cottage roof, and not much else to be seen, the dirt being raised five feet all around as if it were a compost heap. The roof was the soundest part, though a good deal warped and made brittle by the sun. Door-sill there was none, but a perennial passage for the hens under the door-board. Mrs. C. came to the door and asked me to view it from the inside. The hens were driven in by my approach. It was dark, and had a dirt floor for the most part, dank, clammy, and aguish, only here a board and there a board which would not bear removal. She lighted a lamp to show me the inside of the roof and the walls, and also that the board floor

extended under the bed, warning me not to step into the cellar, a sort of dust hole two feet deep. In her own words, they were "good boards overhead, good boards all around, and a good window," — of two whole squares originally, only the cat had passed out that way lately. There was a stove, a bed, and a place to sit, an infant in the house where it was born, a silk parasol, gilt-framed looking-glass, and a patent new coffee-mill nailed to an oak sapling, all told. The bargain was soon concluded, for James had in the meanwhile returned. I to pay four dollars and twenty-five cents to-night, he to vacate at five to-morrow morning, selling to nobody else meanwhile: I to take possession at six. It were well, he said, to be there early, and anticipate certain indistinct but wholly unjust claims on the score of ground rent and fuel. This he assured me was the only encumbrance. At six I passed him and his family on the road. One large bundle held their all, — bed, coffee-mill, looking-glass, hens, — all but the cat; she took to the woods and became a wild cat, and, as I learned afterward, trod in a trap set for woodchucks, and so became a dead cat at last.

I took down this dwelling the same morning, drawing the nails, and removed it to the pond-side by small cartloads, spreading the boards on the grass there to bleach and warp back again in the sun. One early thrush gave me a note or two as I drove along the woodland path. I was informed treacherously by a young Patrick that neighbor Seeley, an Irishman, in the intervals of the carting, transferred the still tolerable, straight, and drivable nails, staples, and spikes to his pocket, and

then stood when I came back to pass the time of day, and look freshly up, unconcerned, with spring thoughts, at the devastation; there being a dearth of work, as he said. He was there to represent spectatordom, and help make this seemingly insignificant event one with the removal of the gods of Troy.

I dug my cellar in the side of a hill sloping to the south, where a woodchuck had formerly dug his burrow, down through sumach and blackberry roots, and the lowest stain of vegetation, six feet square by seven deep, to a fine sand where potatoes would not freeze in any winter. The sides were left shelving, and not stoned; but the sun having never shone on them, the sand still keeps its place. It was but two hours' work. I took particular pleasure in this breaking of ground, for in almost all latitudes men dig into the earth for an equable temperature. Under the most splendid house in the city is still to be found the cellar where they store their roots as of old, and long after the superstructure has disappeared posterity remark its dent in the earth. The house is still but a sort of porch at the entrance of a burrow.

At length, in the beginning of May, with the help of some of my acquaintances, rather to improve so good an occasion for neighborliness than from any necessity, I set up the frame of my house. No man was ever more honored in the character of his raisers than I. They are destined, I trust, to assist at the raising of loftier structures one day. I began to occupy my house on the 4th of July, as soon as it was boarded and roofed, for the boards were carefully feather-edged and lapped, so

that it was perfectly impervious to rain, but before boarding I laid the foundation of a chimney at one end, bringing two cartloads of stones up the hill from the pond in my arms. I built the chimney after my hoeing in the fall, before a fire became necessary for warmth, doing my cooking in the meanwhile out of doors on the ground, early in the morning: which mode I still think is in some respects more convenient and agreeable than the usual one. When it stormed before my bread was baked, I fixed a few boards over the fire, and sat under them to watch my loaf, and passed some pleasant hours in that way. In those days, when my hands were much employed, I read but little, but the least scraps of paper which lay on the ground, my holder, or tablecloth, afforded me as much entertainment, in fact answered the same purpose as the *Iliad*.

It would be worth the while to build still more deliberately than I did, considering, for instance, what foundation a door, a window, a cellar, a garret, have in the nature of man, and perchance never raising any superstructure until we found a better reason for it than our temporal necessities even. There is some of the same fitness in a man's building his own house that there is in a bird's building its own nest. Who knows but if men constructed their dwellings with their own hands, and provided food for themselves and families simply and honestly enough, the poetic faculty would be universally developed, as birds universally sing when they are so engaged? But alas! we do like cowbirds and cuckoos, which lay their eggs in nests which other birds have

built, and cheer no traveller with their chattering and unmusical notes. Shall we forever resign the pleasure of construction to the carpenter? What does architecture amount to in the experience of the mass of men? I never in all my walks came across a man engaged in so simple and natural an occupation as building his house. We belong to the community. It is not the tailor alone who is the ninth part of a man; it is as much the preacher, and the merchant, and the farmer. Where is this division of labor to end? and what object does it finally serve? No doubt another *may* also think for me; but it is not therefore desirable that he should do so to the exclusion of my thinking for myself.

True, there are architects so called in this country, and I have heard of one at least possessed with the idea of making architectural ornaments have a core of truth, a necessity, and hence a beauty, as if it were a revelation to him. All very well perhaps from his point of view, but only a little better than the common dilettantism. A sentimental reformer in architecture, he began at the cornice, not at the foundation. It was only how to put a core of truth within the ornaments, that every sugar-plum, in fact, might have an almond or caraway seed in it, — though I hold that almonds are most wholesome without the sugar, — and not how the inhabitant, the indweller, might build truly within and without, and let the ornaments take care of themselves. What reasonable man ever supposed that ornaments were something outward and in the skin merely, — that the tortoise got his spotted shell, or the shell-fish its mother-o'-pearl tints, by such a contract as the inhabitants of Broad-

way their Trinity Church? But a man has no more to do with the style of architecture of his house than a tortoise with that of its shell: nor need the soldier be so idle as to try to paint the precise *color* of his virtue on his standard. The enemy will find it out. He may turn pale when the trial comes. This man seemed to me to lean over the cornice, and timidly whisper his half truth to the rude occupants who really knew it better than he. What of architectural beauty I now see, I know has gradually grown from within outward, out of the necessities and character of the indweller, who is the only builder, — out of some unconscious truthfulness, and nobleness, without ever a thought for the appearance, and whatever additional beauty of this kind is destined to be produced will be preceded by a like unconscious beauty of life. The most interesting dwellings in this country, as the painter knows, are the most unpretending, humble log huts and cottages of the poor commonly; it is the life of the inhabitants whose shells they are, and not any peculiarity in their surfaces merely, which makes them *picturesque*; and equally interesting will be the citizen's suburban box, when his life shall be as simple and as agreeable to the imagination, and there is as little straining after effect in the style of his dwelling. A great proportion of architectural ornaments are literally hollow, and a September gale would strip them off, like borrowed plumes, without injury to the substantial. They can do without *architecture* who have no olives nor wines in the cellar. What if an equal ado were made about the ornaments of style in literature, and the architects of our bibles spent as much time

about their cornices as the architects of our churches do? So are made the *belles-lettres* and the *beaux-arts* and their professors. Much it concerns a man, forsooth, how a few sticks are slanted over him or under him, and what colors are daubed upon his box. It would signify somewhat, if, in any earnest sense, *he* slanted them and daubed it; but the spirit having departed out of the tenant, it is of a piece with constructing his own coffin, — the architecture of the grave, — and “carpenter” is but another name for “coffin-maker.” One man says, in his despair or indifference to life, take up a handful of the earth at your feet, and paint your house that color. Is he thinking of his last and narrow house? Toss up a copper for it as well. What an abundance of leisure he must have! Why do you take up a handful of dirt? Better paint your house your own complexion; let it turn pale or blush for you. An enterprise to improve the style of cottage architecture! When you have got my ornaments ready, I will wear them.

Before winter I built a chimney, and shingled the sides of my house, which were already impervious to rain, with imperfect and sappy shingles made of the first slice of the log, whose edges I was obliged to straighten with a plane.

I have thus a tight shingled and plastered house, ten feet wide by fifteen long, and eight-feet posts, with a garret and a closet, a large window on each side, two trap-doors, one door at the end, and a brick fireplace opposite. The exact cost of my house, paying the usual price for such materials as I used, but not counting the work, all of which was done by myself, was as follows;

and I give the details because very few are able to tell exactly what their houses cost, and fewer still, if any, the separate cost of the various materials which compose them: —

Boards	\$8 03½,	mostly shanty boards.
Refuse shingles for roof and sides	4 00	
Laths	1 25	
Two second-hand windows with glass	2 43	
One thousand old brick .	4 00	
Two casks of lime	2 40	That was high.
Hair	0 31	More than I needed.
Mantle-tree iron	0 15	
Nails	3 90	
Hinges and screws	0 14	
Latch	0 10	
Chalk	0 01	
Transportation	1 40	{ I carried a good part on my back.
In all	\$28 12½	

These are all the materials, excepting the timber, stones, and sand, which I claimed by squatter's right. I have also a small woodshed adjoining, made chiefly of the stuff which was left after building the house.

I intend to build me a house which will surpass any on the main street in Concord in grandeur and luxury, as soon as it pleases me as much and will cost me no more than my present one.

I thus found that the student who wishes for a shelter can obtain one for a lifetime at an expense not greater

than the rent which he now pays annually. If I seem to boast more than is becoming, my excuse is that I brag for humanity rather than for myself; and my shortcomings and inconsistencies do not affect the truth of my statement. Notwithstanding much cant and hypocrisy, — chaff which I find it difficult to separate from my wheat, but for which I am as sorry as any man, — I will breathe freely and stretch myself in this respect, it is such a relief to both the moral and physical system; and I am resolved that I will not through humility become the devil's attorney. I will endeavor to speak a good word for the truth. At Cambridge College the mere rent of a student's room, which is only a little larger than my own, is thirty dollars each year, though the corporation had the advantage of building thirty-two side by side and under one roof, and the occupant suffers the inconvenience of many and noisy neighbors, and perhaps a residence in the fourth story. I cannot but think that if we had more true wisdom in these respects, not only less education would be needed, because, forsooth, more would already have been acquired, but the pecuniary expense of getting an education would in a great measure vanish. Those conveniences which the student requires at Cambridge or elsewhere cost him or somebody else ten times as great a sacrifice of life as they would with proper management on both sides. Those things for which the most money is demanded are never the things which the student most wants. Tuition, for instance, is an important item in the term bill, while for the far more valuable education which he gets by associating with the most cultivated

of his contemporaries no charge is made. The mode of founding a college is, commonly, to get up a subscription of dollars and cents, and then, following blindly the principles of a division of labor to its extreme, — a principle which should never be followed but with circumspection, — to call in a contractor who makes this a subject of speculation, and he employs Irishmen or other operatives actually to lay the foundations, while the students that are to be are said to be fitting themselves for it; and for these oversights successive generations have to pay. I think that it would be *better than this*, for the students, or those who desire to be benefited by it, even to lay the foundation themselves. The student who secures his coveted leisure and retirement by systematically shirking any labor necessary to man obtains but an ignoble and unprofitable leisure, defrauding himself of the experience which alone can make leisure fruitful. “But,” says one, “you do not mean that the students should go to work with their hands instead of their heads?” I do not mean that exactly, but I mean something which he might think a good deal like that; I mean that they should not *play* life, or *study* it merely, while the community supports them at this expensive game, but earnestly *live* it from beginning to end. How could youths better learn to live than by at once trying the experiment of living? Methinks this would exercise their minds as much as mathematics. If I wished a boy to know something about the arts and sciences, for instance, I would not pursue the common course, which is merely to send him into the neighborhood of some professor, where anything is professed and practised

but the art of life; — to survey the world through a telescope or a microscope, and never with his natural eye; to study chemistry, and not learn how his bread is made, or mechanics, and not learn how it is earned; to discover new satellites to Neptune, and not detect the moles in his eyes, or to what vagabond he is a satellite himself; or to be devoured by the monsters that swarm all around him, while contemplating the monsters in a drop of vinegar. Which would have advanced the most at the end of a month, — the boy who had made his own jackknife from the ore which he had dug and smelted, reading as much as would be necessary for this — or the boy who had attended the lectures on metallurgy at the Institute in the meanwhile, and had received a Rodgers penknife from his father? Which would be most likely to cut his fingers? . . . To my astonishment I was informed on leaving college that I had studied navigation! — why, if I had taken one turn down the harbor I should have known more about it. Even the *poor* student studies and is taught only *political* economy, while that economy of living which is synonymous with philosophy is not even sincerely professed in our colleges. The consequence is, that while he is reading Adam Smith, Ricardo, and Say, he runs his father in debt irretrievably.

As with our colleges, so with a hundred “modern improvements;” there is an illusion about them; there is not always a positive advance. The devil goes on exacting compound interest to the last for his early share and numerous succeeding investments in them. Our inventions are wont to be pretty toys, which distract

our attention from serious things. They are but improved means to an unimproved end, an end which it was already but too easy to arrive at; as railroads lead to Boston or New York. We are in great haste to construct a magnetic telegraph from Maine to Texas; but Maine and Texas, it may be, have nothing important to communicate. Either is in such a predicament as the man who was earnest to be introduced to a distinguished deaf woman, but when he was presented, and one end of her ear trumpet was put into his hand, had nothing to say. As if the main object were to talk fast and not to talk sensibly. We are eager to tunnel under the Atlantic and bring the Old World some weeks nearer to the New; but perchance the first news that will leak through into the broad, flapping American ear will be that the Princess Adelaide has the whooping cough. After all, the man whose horse trots a mile in a minute does not carry the most important messages; he is not an evangelist, nor does he come round eating locusts and wild honey. I doubt if Flying Childers ever carried a peck of corn to mill.

One says to me, "I wonder that you do not lay up money; you love to travel; you might take the cars and go to Fitchburg to-day and see the country." But I am wiser than that. I have learned that the swiftest traveller is he that goes afoot. I say to my friend, Suppose we try who will get there first. The distance is thirty miles; the fare ninety cents. That is almost a day's wages. I remember when wages were sixty cents a day for laborers on this very road. Well, I start now on foot, and get there before night; I have travelled at that rate by the

week together. You will in the meanwhile have earned your fare, and arrive there some time to-morrow, or possibly this evening, if you are lucky enough to get a job in season. Instead of going to Fitchburg, you will be working here the greater part of the day. And so, if the railroad reached round the world, I think that I should keep ahead of you; and as for seeing the country and getting experience of that kind, I should have to cut your acquaintance altogether.

Such is the universal law, which no man can ever outwit, and with regard to the railroad even we may say it is as broad as it is long. To make a railroad round the world available to all mankind is equivalent to grading the whole surface of the planet. Men have an indistinct notion that if they keep up this activity of joint stocks and spades long enough all will at length ride somewhere, in next to no time, and for nothing; but though a crowd rushes to the depot, and the conductor shouts "All aboard!" when the smoke is blown away and the vapor condensed, it will be perceived that a few are riding, but the rest are run over, — and it will be called, and will be, "A melancholy accident." No doubt they can ride at last who shall have earned their fare, that is, if they survive so long, but they will probably have lost their elasticity and desire to travel by that time. This spending of the best part of one's life earning money in order to enjoy a questionable liberty during the least valuable part of it reminds me of the Englishman who went to India to make a fortune first, in order that he might return to England and live the life of a poet. He should have gone up garret at once. "What!"

exclaim a million Irishmen starting up from all the shanties in the land, "is not this railroad which we have built a good thing?" Yes, I answer, *comparatively* good, that is, you might have done worse; but I wish, as you are brothers of mine, that you could have spent your time better than digging in this dirt.

Before I finished my house, wishing to earn ten or twelve dollars by some honest and agreeable method, in order to meet my unusual expenses, I planted about two acres and a half of light and sandy soil near it chiefly with beans, but also a small part with potatoes, corn, peas, and turnips. The whole lot contains eleven acres, mostly growing up to pines and hickories, and was sold the preceding season for eight dollars and eight cents an acre. One farmer said that it was "good for nothing but to raise cheeping squirrels on." I put no manure whatever on this land, not being the owner, but merely a squatter, and not expecting to cultivate so much again, and I did not quite hoe it all once. I got out several cords of stumps in plowing, which supplied me with fuel for a long time, and left small circles of virgin mould, easily distinguishable through the summer by the greater luxuriance of the beans there. The dead and for the most part unmerchantable wood behind my house, and the driftwood from the pond, have supplied the remainder of my fuel. I was obliged to hire a team and a man for the plowing, though I held the plow myself. My farm outgoes for the first season were, for implements, seed, work, etc., \$14.72½. The seed corn was given me. This never costs anything to

speak of, unless you plant more than enough. I got twelve bushels of beans, and eighteen bushels of potatoes, beside some peas and sweet corn. The yellow corn and turnips were too late to come to anything. My whole income from the farm was

	\$23 44
Deducting the outgoes	14 72½
<hr/>	
There are left	\$8 71½,

beside produce consumed and on hand at the time this estimate was made of the value of \$4.50, — the amount on hand much more than balancing a little grass which I did not raise. All things considered, that is, considering the importance of a man's soul and of to-day, notwithstanding the short time occupied by my experiment, nay, partly even because of its transient character, I believe that that was doing better than any farmer in Concord did that year.

The next year I did better still, for I spaded up all the land which I required, about a third of an acre, and I learned from the experience of both years, not being in the least awed by many celebrated works on husbandry, Arthur Young among the rest, that if one would live simply and eat only the crop which he raised, and raise no more than he ate, and not exchange it for an insufficient quantity of more luxurious and expensive things, he would need to cultivate only a few rods of ground, and that it would be cheaper to spade up that than to use oxen to plow it, and to select a fresh spot from time to time than to manure the old, and he could do all his necessary farm work as it were with his left hand at

odd hours in the summer; and thus he would not be tied to an ox, or horse, or cow, or pig, as at present. I desire to speak impartially on this point, and as one not interested in the success or failure of the present economical and social arrangements. I was more independent than any farmer in Concord, for I was not anchored to a house or farm, but could follow the bent of my genius, which is a very crooked one, every moment. Beside being better off than they already, if my house had been burned or my crops had failed, I should have been nearly as well off as before.

I am wont to think that men are not so much the keepers of herds as herds are the keepers of men, the former are so much the freer. Men and oxen exchange work; but if we consider necessary work only, the oxen will be seen to have greatly the advantage, their farm is so much the larger. Man does some of his part of the exchange work in his six weeks of haying, and it is no boy's play. Certainly no nation that lived simply in all respects, that is, no nation of philosophers, would commit so great a blunder as to use the labor of animals. True, there never was and is not likely soon to be a nation of philosophers, nor am I certain it is desirable that there should be. However, *I* should never have broken a horse or bull and taken him to board for any work he might do for me, for fear I should become a horseman or a herds-man merely; and if society seems to be the gainer by so doing, are we certain that what is one man's gain is not another's loss, and that the stable-boy has equal cause with his master to be satisfied? Granted that some public works would not have been constructed

without this aid, and let man share the glory of such with the ox and horse; does it follow that he could not have accomplished works yet more worthy of himself in that case? When men begin to do, not merely unnecessary or artistic, but luxurious and idle work, with their assistance, it is inevitable that a few do all the exchange work with the oxen, or, in other words, become the slaves of the strongest. Man thus not only works for the animal within him, but, for a symbol of this, he works for the animal without him. Though we have many substantial houses of brick or stone, the prosperity of the farmer is still measured by the degree to which the barn overshadows the house. This town is said to have the largest houses for oxen, cows, and horses hereabouts, and it is not behindhand in its public buildings; but there are very few halls for free worship or free speech in this county. It should not be by their architecture, but why not even by their power of abstract thought, that nations should seek to commemorate themselves? How much more admirable the Bhagvat-Geeta than all the ruins of the East! Towers and temples are the luxury of princes. A simple and independent mind does not toil at the bidding of any prince. Genius is not a retainer to any emperor, nor is its material silver, or gold, or marble, except to a trifling extent. To what end, pray, is so much stone hammered? In Arcadia, when I was there, I did not see any hammering stone. Nations are possessed with an insane ambition to perpetuate the memory of themselves by the amount of hammered stone they leave. What if equal pains were taken to smooth and polish their manners?

One piece of good sense would be more memorable than a monument as high as the moon. I love better to see stones in place. The grandeur of Thebes was a vulgar grandeur. More sensible is a rod of stone wall that bounds an honest man's field than a hundred-gated Thebes that has wandered farther from the true end of life. The religion and civilization which are barbaric and heathenish build splendid temples; but what you might call Christianity does not. Most of the stone nation hammers goes toward its tomb only. It buries itself alive. As for the Pyramids, there is nothing to wonder at in them so much as the fact that so many men could be found degraded enough to spend their lives constructing a tomb for some ambitious beetle, whom it would have been wiser and manlier to have drowned in the Nile, and then given his body to the dogs. I might possibly invent some excuse for them and him, but I have no time for it. As for the religion and love of art of the builders, it is much the same all the world over, whether the building be an Egyptian temple or the United States Bank. It costs more than it comes to. The mainspring is vanity, assisted by the love of garlic and bread and butter. Mr. Balcom, a promising young architect, designs it on the back of his Vitruvius, with hard pencil and ruler, and the job is let out to Dobson & Sons, stonecutters. When the thirty centuries begin to look down on it, mankind begin to look up at it. As for your high towers and monuments, there was a crazy fellow once in this town who undertook to dig through to China, and he got so far that, as he said, he heard the Chinese pots and kettles rattle; but I think

that I shall not go out of my way to admire the hole which he made. Many are concerned about the monuments of the West and the East, — to know who built them. For my part, I should like to know who in those days did not build them, — who were above such trifling. But to proceed with my statistics.

By surveying, carpentry, and day-labor of various other kinds in the village in the meanwhile, for I have as many trades as fingers, I had earned \$13.34. The expense of food for eight months, namely, from July 4th to March 1st, the time when these estimates were made, though I lived there more than two years, — not counting potatoes, a little green corn, and some peas, which I had raised, nor considering the value of what was on hand at the last date, — was

Rice	\$1 73 $\frac{1}{2}$		
Molasses	1 73	Cheapest form of the saccharine.	
Rye meal	1 04 $\frac{3}{4}$		
Indian meal	0 99 $\frac{3}{4}$	Cheaper than rye.	
Pork	0 22		
Flour	0 88	{ Costs more than Indian meal, both money and trouble.	All experiments which failed.
Sugar	0 80		
Lard	0 65		
Apples	0 25		
Dried apple	0 22		
Sweet potatoes	0 10		
One pumpkin	0 6		
One watermelon	0 2		
Salt	0 3		

Yes, I did eat \$8.74, all told; but I should not thus unblushingly publish my guilt, if I did not know that most of my readers were equally guilty with myself, and that their deeds would look no better in print. The next year I sometimes caught a mess of fish for my dinner, and once I went so far as to slaughter a woodchuck which ravaged my bean-field, — effect his transmigration, as a Tartar would say, — and devour him, partly for experiment's sake; but though it afforded me a momentary enjoyment, notwithstanding a musky flavor, I saw that the longest use would not make that a good practice, however it might seem to have your woodchucks ready dressed by the village butcher.

Clothing and some incidental expenses within the same dates, though little can be inferred from this item, amounted to

\$8 40 $\frac{3}{4}$

Oil and some household utensils . . . 2 00

So that all the pecuniary outgoes, excepting for washing and mending, which for the most part were done out of the house, and their bills have not yet been received, — and these are all and more than all the ways by which money necessarily goes out in this part of the world, — were

House	\$28 12 $\frac{1}{2}$
Farm one year	14 72 $\frac{1}{2}$
Food eight months	8 74
Clothing, etc., eight months	8 40 $\frac{3}{4}$
Oil, etc., eight months	2 00
In all	<u>\$61 99$\frac{3}{4}$</u>

I address myself now to those of my readers who have a living to get. And to meet this I have for farm produce sold

	\$23 44
Earned by day-labor.	13 34
In all	\$36 78,

which subtracted from the sum of the outgoes leaves a balance of $\$25.21\frac{3}{4}$ on the one side, — this being very nearly the means with which I started, and the measure of expenses to be incurred, — and on the other, beside the leisure and independence and health thus secured, a comfortable house for me as long as I choose to occupy it.

These statistics, however accidental and therefore uninteresting they may appear, as they have a certain completeness, have a certain value also. Nothing was given me of which I have not rendered some account. It appears from the above estimate, that my food alone cost me in money about twenty-seven cents a week. It was, for nearly two years after this, rye and Indian meal without yeast, potatoes, rice, a very little salt pork, molasses, and salt; and my drink, water. It was fit that I should live on rice, mainly, who loved so well the philosophy of India. To meet the objections of some inveterate cavillers, I may as well state, that if I dined out occasionally, as I always had done, and I trust shall have opportunities to do again, it was frequently to the detriment of my domestic arrangements. But the dining out, being, as I have stated, a constant element, does not in the least affect a comparative statement like this.

I learned from my two years' experience that it would cost incredibly little trouble to obtain one's necessary food, even in this latitude; that a man may use as simple a diet as the animals, and yet retain health and strength. I have made a satisfactory dinner, satisfactory on several accounts, simply off a dish of purslane (*Portulaca oleracea*) which I gathered in my cornfield, boiled and salted. I give the Latin on account of the savoriness of the trivial name. And pray what more can a reasonable man desire, in peaceful times, in ordinary noons, than a sufficient number of ears of green sweet corn boiled, with the addition of salt? Even the little variety which I used was a yielding to the demands of appetite, and not of health. Yet men have come to such a pass that they frequently starve, not for want of necessities, but for want of luxuries; and I know a good woman who thinks that her son lost his life because he took to drinking water only.

The reader will perceive that I am treating the subject rather from an economic than a dietetic point of view, and he will not venture to put my abstemiousness to the test unless he has a well-stocked larder.

Bread I at first made of pure Indian meal and salt, genuine hoe-cakes, which I baked before my fire out of doors on a shingle or the end of a stick of timber sawed off in building my house; but it was wont to get smoked and to have a piny flavor. I tried flour also; but have at last found a mixture of rye and Indian meal most convenient and agreeable. In cold weather it was no little amusement to bake several small loaves of this in succession, tending and turning them as carefully as at

Egyptian his hatching eggs. They were a real cereal fruit which I ripened, and they had to my senses a fragrance like that of other noble fruits, which I kept in as long as possible by wrapping them in cloths. I made a study of the ancient and indispensable art of bread-making, consulting such authorities as offered, going back to the primitive days and first invention of the unleavened kind, when from the wildness of nuts and meats men first reached the mildness and refinement of this diet, and travelling gradually down in my studies through that accidental souring of the dough which, it is supposed, taught the leavening process, and through the various fermentations thereafter, till I came to "good, sweet, wholesome bread," the staff of life. Leaven, which some deem the soul of bread, the *spiritus* which fills its cellular tissue, which is religiously preserved like the vestal fire, — some precious bottleful, I suppose, first brought over in the Mayflower, did the business for America, and its influence is still rising, swelling, spreading, in cereal billows over the land, — this seed I regularly and faithfully procured from the village, till at length one morning I forgot the rules, and scalded my yeast; by which accident I discovered that even this was not indispensable, — for my discoveries were not by the synthetic but analytic process, — and I have gladly omitted it since, though most housewives earnestly assured me that safe and wholesome bread without yeast might not be, and elderly people prophesied a speedy decay of the vital forces. Yet I find it not to be an essential ingredient, and after going without it for a year am still in the land of the living; and I

am glad to escape the trivialness of carrying a bottleful in my pocket, which would sometimes pop and discharge its contents to my discomfiture. It is simpler and more respectable to omit it. Man is an animal who more than any other can adapt himself to all climates and circumstances. Neither did I put any sal-soda, or other acid or alkali, into my bread. It would seem that I made it according to the recipe which Marcus Porcius Cato gave about two centuries before Christ. "*Panem depsticium sic facito. Manus mortariumque bene lavato. Farinam in mortarium indito, aquae paulatim addito, subigitoque pulchre. Ubi bene subegeris, defingito, coquitoque sub testu.*" Which I take to mean, "Make kneaded bread thus. Wash your hands and trough well. Put the meal into the trough, add water gradually, and knead it thoroughly. When you have kneaded it well, mould it, and bake it under a cover," that is, in a baking-kettle. Not a word about leaven. But I did not always use this staff of life. At one time, owing to the emptiness of my purse, I saw none of it for more than a month.

Every New Englander might easily raise all his own breadstuffs in this land of rye and Indian corn, and not depend on distant and fluctuating markets for them. Yet so far are we from simplicity and independence that, in Concord, fresh and sweet meal is rarely sold in the shops, and hominy and corn in a still coarser form are hardly used by any. For the most part the farmer gives to his cattle and hogs the grain of his own producing, and buys flour, which is at least no more wholesome, at a greater cost, at the store. I saw that I could easily

raise my bushel or two of rye and Indian corn, for the former will grow on the poorest land, and the latter does not require the best, and grind them in a hand-mill, and so do without rice and pork; and if I must have some concentrated sweet, I found by experiment that I could make a very good molasses either of pumpkins or beets, and I knew that I needed only to set out a few maples to obtain it more easily still, and while these were growing I could use various substitutes beside those which I have named. "For," as the Forefathers sang, —

"we can make liquor to sweeten our lips
Of pumpkins and parsnips and walnut-tree chips."

Finally, as for salt, that grossest of groceries, to obtain this might be a fit occasion for a visit to the seashore, or, if I did without it altogether, I should probably drink the less water. I do not learn that the Indians ever troubled themselves to go after it.

Thus I could avoid all trade and barter, so far as my food was concerned, and having a shelter already, it would only remain to get clothing and fuel. The pantaloons which I now wear were woven in a farmer's family, — thank Heaven there is so much virtue still in man; for I think the fall from the farmer to the operative as great and memorable as that from the man to the farmer; — and in a new country, fuel is an encumbrance. As for a habitat, if I were not permitted still to squat, I might purchase one acre at the same price for which the land I cultivated was sold — namely, eight dollars and eight cents. But as it was, I considered that I enhanced the value of the land by squatting on it.

There is a certain class of unbelievers who sometimes ask me such questions as, if I think that I can live on vegetable food alone; and to strike at the root of the matter at once, — for the root is faith, — I am accustomed to answer such, that I can live on board nails. If they cannot understand that, they cannot understand much that I have to say. For my part, I am glad to hear of experiments of this kind being tried; as that a young man tried for a fortnight to live on hard, raw corn on the ear, using his teeth for all mortar. The squirrel tribe tried the same and succeeded. The human race is interested in these experiments, though a few old women who are incapacitated for them, or who own their thirds in mills, may be alarmed.

My furniture, part of which I made myself, — and the rest cost me nothing of which I have not rendered an account, — consisted of a bed, a table, a desk, three chairs, a looking-glass three inches in diameter, a pair of tongs and andirons, a kettle, a skillet, and a frying-pan, a dipper, a wash-bowl, two knives and forks, three plates, one cup, one spoon, a jug for oil, a jug for molasses, and a japanned lamp. None is so poor that he need sit on a pumpkin. That is shiftlessness. There is a plenty of such chairs as I like best in the village garrets to be had for taking them away. Furniture! Thank God, I can sit and I can stand without the aid of a furniture warehouse. What man but a philosopher would not be ashamed to see his furniture packed in a cart and going up country exposed to the light of heaven and the yes of men, a beggarly account of empty boxes? That

is Spaulding's furniture. I could never tell from inspecting such a load whether it belonged to a so-called rich man or a poor one; the owner always seemed poverty-stricken. Indeed, the more you have of such things the poorer you are. Each load looks as if it contained the contents of a dozen shanties; and if one shanty is poor, this is a dozen times as poor. Pray, for what do we *move* ever but to get rid of our furniture, our *exuviae*; at last to go from this world to another newly furnished, and leave this to be burned? It is the same as if all these traps were buckled to a man's belt, and he could not move over the rough country where our lines are cast without dragging them, — dragging his trap. He was a lucky fox that left his tail in the trap. The muskrat will gnaw his third leg off to be free. No wonder man has lost his elasticity. How often he is at a dead set! "Sir, if I may be so bold, what do you mean by a dead set?" If you are a seer, whenever you meet a man you will see all that he owns, ay, and much that he pretends to disown, behind him, even to his kitchen furniture and all the trumpery which he saves and will not burn, and he will appear to be harnessed to it and making what headway he can. I think that the man is at a dead set who has got through a knot-hole or gateway where his sledge load of furniture cannot follow him. I cannot but feel compassion when I hear some trig, compact-looking man, seemingly free, all girded and ready, speak of his "furniture," as whether it is insured or not. "But what shall I do with my furniture?" My gay butterfly is entangled in a spider's web then. Even those who seem for a long while not to have any,

if you inquire more narrowly you will find have some stored in somebody's barn. I look upon England to-day as an old gentleman who is travelling with a great deal of baggage, trumpery which has accumulated from long housekeeping, which he has not the courage to burn; great trunk, little trunk, bandbox, and bundle. Throw away the first three at least. It would surpass the powers of a well man nowadays to take up his bed and walk, and I should certainly advise a sick one to lay down his bed and run. When I have met an immigrant tottering under a bundle which contained his all, — looking like an enormous wen which had grown out of the nape of his neck, — I have pitied him, not because that was his all, but because he had all *that* to carry. If I have got to drag my trap, I will take care that it be a light one and do not nip me in a vital part. But perchance it would be wisest never to put one's paw into it.

I would observe, by the way, that it costs me nothing for curtains, for I have no gazers to shut out but the sun and moon, and I am willing that they should look in. The moon will not sour milk nor taint meat of mine, nor will the sun injure my furniture or fade my carpet; and if he is sometimes too warm a friend, I find it still better economy to retreat behind some curtain which nature has provided, than to add a single item to the details of housekeeping. A lady once offered me a mat, but as I had no room to spare within the house, nor time to spare within or without to shake it, I declined it, preferring to wipe my feet on the sod before my door. It is best to avoid the beginnings of evil.

Not long since I was present at the auction of a deacon's effects, for his life had not been ineffectual: —

“The evil that men do lives after them.”

As usual, a great proportion was trumpery which had begun to accumulate in his father's day. Among the rest was a dried tapeworm. And now, after lying half a century in his garret and other dust holes, these things were not burned; instead of a *bonfire*, or purifying destruction of them, there was an *auction*, or increasing of them. The neighbors eagerly collected to view them, bought them all, and carefully transported them to their garrets and dust holes, to lie there till their estates are settled, when they will start again. When a man dies he kicks the dust.

The customs of some savage nations might, perchance, be profitably imitated by us, for they at least go through the semblance of casting their slough annually; they have the idea of the thing, whether they have the reality or not. Would it not be well if we were to celebrate such a “busk,” or “feast of first fruits,” as Bartram describes to have been the custom of the Mucclasse Indians? “When a town celebrates the busk,” says he, “having previously provided themselves with new clothes, new pots, pans, and other household utensils and furniture, they collect all their worn out clothes and other despicable things, sweep and cleanse their houses, squares, and the whole town of their filth, which with all the remaining grain and other old provisions they cast together into one common heap, and consume it with fire. After having taken

medicine, and fasted for three days, all the fire in the town is extinguished. During this fast they abstain from the gratification of every appetite and passion whatever. A general amnesty is proclaimed; all malefactors may return to their town."

"On the fourth morning, the high priest, by rubbing dry wood together, produces new fire in the public square, from whence every habitation in the town is supplied with the new and pure flame."

They then feast on the new corn and fruits, and dance and sing for three days, "and the four following days they receive visits and rejoice with their friends from neighboring towns who have in like manner purified and prepared themselves."

The Mexicans also practised a similar purification at the end of every fifty-two years, in the belief that it was time for the world to come to an end.

I have scarcely heard of a truer sacrament, that is, as the dictionary defines it, "outward and visible sign of an inward and spiritual grace," than this, and I have no doubt that they were originally inspired directly from Heaven to do thus, though they have no Biblical record of the revelation.

For more than five years I maintained myself thus solely by the labor of my hands, and I found that, by working about six weeks in a year, I could meet all the expenses of living. The whole of my winters, as well as most of my summers, I had free and clear for study. I have thoroughly tried school-keeping, and found that my expenses were in proportion, or rather out of pro-

portion, to my income, for I was obliged to dress and train, not to say think and believe, accordingly, and I lost my time into the bargain. As I did not teach for the good of my fellow-men, but simply for a livelihood, this was a failure. I have tried trade; but I found that it would take ten years to get under way in that, and that then I should probably be on my way to the devil. I was actually afraid that I might by that time be doing what is called a good business. When formerly I was looking about to see what I could do for a living, some sad experience in conforming to the wishes of friends being fresh in my mind to tax my ingenuity, I thought often and seriously of picking huckleberries; that surely I could do, and its small profits might suffice, — for my greatest skill has been to want but little, — so little capital it required, so little distraction from my wonted moods, I foolishly thought. While my acquaintances went unhesitatingly into trade or the professions, I contemplated this occupation as most like theirs; ranging the hills all summer to pick the berries which came in my way, and thereafter carelessly dispose of them; so, to keep the flocks of Admetus. I also dreamed that I might gather the wild herbs, or carry evergreens to such villagers as loved to be reminded of the woods, even to the city, by hay-cart loads. But I have since learned that trade curses everything it handles; and though you trade in messages from heaven, the whole curse of trade attaches to the business.

As I preferred some things to others, and especially valued my freedom, as I could fare hard and yet succeed well, I did not wish to spend my time in earning rich

carpets or other fine furniture, or delicate cookery, or a house in the Grecian or the Gothic style just yet. If there are any to whom it is no interruption to acquire these things, and who know how to use them when acquired, I relinquish to them the pursuit. Some are "industrious," and appear to love labor for its own sake, or perhaps because it keeps them out of worse mischief; to such I have at present nothing to say. Those who would not know what to do with more leisure than they now enjoy, I might advise to work twice as hard as they do, — work till they pay for themselves, and get their free papers. For myself I found that the occupation of a day-laborer was the most independent of any, especially as it required only thirty or forty days in a year to support one. The laborer's day ends with the going down of the sun, and he is then free to devote himself to his chosen pursuit, independent of his labor; but his employer, who speculates from month to month, has no respite from one end of the year to the other.

In short, I am convinced, both by faith and experience, that to maintain one's self on this earth is not a hardship but a pastime, if we will live simply and wisely; as the pursuits of the simpler nations are still the sports of the more artificial. It is not necessary that a man should earn his living by the sweat of his brow, unless he sweats easier than I do.

One young man of my acquaintance, who has inherited some acres, told me that he thought he should live as I did, *if he had the means*. I would not have any one adopt *my* mode of living on any account; for, beside that before he has fairly learned it I may have found

out another for myself, I desire that there may be as many different persons in the world as possible; but I would have each one be very careful to find out and pursue *his own* way, and not his father's or his mother's or his neighbor's instead. The youth may build or plant or sail, only let him not be hindered from doing that which he tells me he would like to do. It is by a mathematical point only that we are wise, as the sailor or the fugitive slave keeps the polestar in his eye; but that is sufficient guidance for all our life. We may not arrive at our port within a calculable period, but we would preserve the true course.

Undoubtedly, in this case, what is true for one is truer still for a thousand, as a large house is not proportionally more expensive than a small one, since one roof may cover, one cellar underlie, and one wall separate several apartments. But for my part, I preferred the solitary dwelling. Moreover, it will commonly be cheaper to build the whole yourself than to convince another of the advantage of the common wall; and when you have done this, the common partition, to be much cheaper, must be a thin one, and that other may prove a bad neighbor, and also not keep his side in repair. The only coöperation which is commonly possible is exceedingly partial and superficial; and what little true coöperation there is, is as if it were not, being a harmony inaudible to men. If a man has faith, he will coöperate with equal faith everywhere; if he has not faith, he will continue to live like the rest of the world, whatever company he is joined to. To coöperate in the highest as well as the lowest sense, means *to get our living together*. I heard it

proposed lately that two young men should travel together over the world, the one without money, earning his means as he went, before the mast and behind the plow, the other carrying a bill of exchange in his pocket. It was easy to see that they could not long be companions or coöperate, since one would not *operate* at all. They would part at the first interesting crisis in their adventures. Above all, as I have implied, the man who goes alone can start to-day; but he who travels with another must wait till that other is ready, and it may be a long time before they get off.

But all this is very selfish, I have heard some of my townsmen say. I confess that I have hitherto indulged very little in philanthropic enterprises. I have made some sacrifices to a sense of duty, and among others have sacrificed this pleasure also. There are those who have used all their arts to persuade me to undertake the support of some poor family in the town; and if I had nothing to do — for the devil finds employment for the idle — I might try my hand at some such pastime as that. However, when I have thought to indulge myself in this respect, and lay their Heaven under an obligation by maintaining certain poor persons in all respects as comfortably as I maintain myself, and have even ventured so far as to make them the offer, they have one and all unhesitatingly preferred to remain poor. While my townsmen and women are devoted in so many ways to the good of their fellows, I trust that one at least may be spared to other and less humane pursuits. You must have a genius for charity as well as for anything else. As

for Doing-good, that is one of the professions which are full. Moreover, I have tried it fairly, and, strange as it may seem, am satisfied that it does not agree with my constitution. Probably I should not consciously and deliberately forsake my particular calling to do the good which society demands of me, to save the universe from annihilation; and I believe that a like but infinitely greater steadfastness elsewhere is all that now preserves it. But I would not stand between any man and his genius; and to him who does this work, which I decline, with his whole heart and soul and life, I would say, Persevere, even if the world call it doing evil, as it is most likely they will.

I am far from supposing that my case is a peculiar one; no doubt many of my readers would make a similar defence. At doing something, — I will not engage that my neighbors shall pronounce it good, — I do not hesitate to say that I should be a capital fellow to hire; but what that is, it is for my employer to find out. What *good* I do, in the common sense of that word, must be aside from my main path, and for the most part wholly unintended. Men say, practically, Begin where you are and such as you are, without aiming mainly to become of more worth, and with kindness aforethought go about doing good. If I were to preach at all in this strain, I should say rather, Set about being good. As if the sun should stop when he had kindled his fires up to the splendor of a moon or a star of the sixth magnitude, and go about like a Robin Goodfellow, peeping in at every cottage window, inspiring lunatics, and tainting meats, and making darkness visible, instead of steadily increasing his

genial heat and beneficence till he is of such brightness that no mortal can look him in the face, and then, and in the meanwhile too, going about the world in his own orbit, doing it good, or rather, as a truer philosophy has discovered, the world going about him getting good. When Phaëton, wishing to prove his heavenly birth by his beneficence, had the sun's chariot but one day, and drove out of the beaten track, he burned several blocks of houses in the lower streets of heaven, and scorched the surface of the earth, and dried up every spring, and made the great desert of Sahara, till at length Jupiter hurled him headlong to the earth with a thunderbolt, and the sun, through grief at his death, did not shine for a year.

There is no odor so bad as that which arises from goodness tainted. It is human, it is divine, carrion. If I knew for a certainty that a man was coming to my house with the conscious design of doing me good, I should run for my life, as from that dry and parching wind of the African deserts called the simoom, which fills the mouth and nose and ears and eyes with dust till you are suffocated, for fear that I should get some of his good done to me, — some of its virus mingled with my blood. No, — in this case I would rather suffer evil the natural way. A man is not a good *man* to me because he will feed me if I should be starving, or warm me if I should be freezing, or pull me out of a ditch if I should ever fall into one. I can find you a Newfoundland dog that will do as much. Philanthropy is not love for one's fellow-man in the broadest sense. Howard was no doubt an exceedingly kind and worthy man in his way, and has his reward; but, comparatively speaking, what are a hundred How-

ards to *us*, if their philanthropy do not help *us* in our best estate, when we are most worthy to be helped? I never heard of a philanthropic meeting in which it was sincerely proposed to do any good to me, or the like of me.

The Jesuits were quite balked by those Indians who, being burned at the stake, suggested new modes of torture to their tormentors. Being superior to physical suffering, it sometimes chanced that they were superior to any consolation which the missionaries could offer; and the law to do as you would be done by fell with less persuasiveness on the ears of those who, for their part, did not care how they were done by, who loved their enemies after a new fashion, and came very near freely forgiving them all they did.

Be sure that you give the poor the aid they most need, though it be your example which leaves them far behind. If you give money, spend yourself with it, and do not merely abandon it to them. We make curious mistakes sometimes. Often the poor man is not so cold and hungry as he is dirty and ragged and gross. It is partly his taste, and not merely his misfortune. If you give him money, he will perhaps buy more rags with it. I was wont to pity the clumsy Irish laborers who cut ice on the pond, in such mean and ragged clothes, while I shivered in my more tidy and somewhat more fashionable garments, till, one bitter cold day, one who had slipped into the water came to my house to warm him, and I saw him strip off three pairs of pants and two pairs of stockings ere he got down to the skin, though they were dirty and ragged enough, it is true, and that he could afford

to refuse the *extra* garments which I offered him, he had so many *intra* ones. This ducking was the very thing he needed. Then I began to pity myself, and I saw that it would be a greater charity to bestow on me a flannel shirt than a whole slop-shop on him. There are a thousand hacking at the branches of evil to one who is striking at the root, and it may be that he who bestows the largest amount of time and money on the needy is doing the most by his mode of life to produce that misery which he strives in vain to relieve. It is the pious slave-breeder devoting the proceeds of every tenth slave to buy a Sunday's liberty for the rest. Some show their kindness to the poor by employing them in their kitchens. Would they not be kinder if they employed themselves there? You boast of spending a tenth part of your income in charity; maybe you should spend the nine tenths so, and done with it. Society recovers only a tenth part of the property then. Is this owing to the generosity of him in whose possession it is found, or to the remissness of the officers of justice?

Philanthropy is almost the only virtue which is sufficiently appreciated by mankind. Nay, it is greatly overrated; and it is our selfishness which overrates it. A robust poor man, one sunny day here in Concord, praised a fellow-townsmen to me, because, as he said, he was kind to the poor; meaning himself. The kind uncles and aunts of the race are more esteemed than its true spiritual fathers and mothers. I once heard a reverend lecturer on England, a man of learning and intelligence, after enumerating her scientific, literary, and political worthies, Shakespeare, Bacon, Crom-

well, Milton, Newton, and others, speak next of her Christian heroes, whom, as if his profession required it of him, he elevated to a place far above all the rest, as the greatest of the great. They were Penn, Howard, and Mrs. Fry. Every one must feel the falsehood and cant of this. The last were not England's best men and women; only, perhaps, her best philanthropists.

I would not subtract anything from the praise that is due to philanthropy, but merely demand justice for all who by their lives and works are a blessing to mankind. I do not value chiefly a man's uprightness and benevolence, which are, as it were, his stem and leaves. Those plants of whose greenness withered we make herb tea for the sick serve but a humble use, and are most employed by quacks. I want the flower and fruit of a man; that some fragrance be wafted over from him to me, and some ripeness flavor our intercourse. His goodness must not be a partial and transitory act, but a constant superfluity, which costs him nothing and of which he is unconscious. This is a charity that hides a multitude of sins. The philanthropist too often surrounds mankind with the remembrance of his own cast-off griefs as an atmosphere, and calls it sympathy. We should impart our courage, and not our despair, our health and ease, and not our disease, and take care that this does not spread by contagion. From what southern plains comes up the voice of wailing? Under what latitudes reside the heathen to whom we would send light? Who is that intemperate and brutal man whom we would redeem? If anything ail a man, so that he does not perform his functions, if he have a pain in his bowels even,

— for that is the seat of sympathy, — he forthwith sets about reforming — the world. Being a microcosm himself, he discovers — and it is a true discovery, and he is the man to make it — that the world has been eating green apples; to his eyes, in fact, the globe itself is a great green apple, which there is danger awful to think of that the children of men will nibble before it is ripe; and straightway his drastic philanthropy seeks out the Esquimau and the Patagonian, and embraces the populous Indian and Chinese villages; and thus, by a few years of philanthropic activity, the powers in the meanwhile using him for their own ends, no doubt, he cures himself of his dyspepsia, the globe acquires a faint blush on one or both of its cheeks, as if it were beginning to be ripe, and life loses its crudity and is once more sweet and wholesome to live. I never dreamed of any enormity greater than I have committed. I never knew, and never shall know, a worse man than myself.

I believe that what so saddens the reformer is not his sympathy with his fellows in distress, but, though he be the holiest son of God, is his private ail. Let this be righted, let the spring come to him, the morning rise over his couch, and he will forsake his generous companions without apology. My excuse for not lecturing against the use of tobacco is, that I never chewed it, that is a penalty which reformed tobacco-chewers have to pay; though there are things enough I have chewed which I could lecture against. If you should ever be betrayed into any of these philanthropies, do not let your left hand know what your right hand does, for it is not worth knowing. Rescue the drowning and tie your shoe-

strings. Take your time, and set about some free labor.

Our manners have been corrupted by communication with the saints. Our hymn-books resound with a melodious cursing of God and enduring Him forever. One would say that even the prophets and redeemers had rather consoled the fears than confirmed the hopes of man. There is nowhere recorded a simple and irrepressible satisfaction with the gift of life, any memorable praise of God. All health and success does me good, however far off and withdrawn it may appear; all disease and failure helps to make me sad and does me evil, however much sympathy it may have with me or I with it. If, then, we would indeed restore mankind by truly Indian, botanic, magnetic, or natural means, let us first be as simple and well as Nature ourselves, dispel the clouds which hang over our own brows, and take up a little life into our pores. Do not stay to be an overseer of the poor, but endeavor to become one of the worthies of the world.

I read in the Gulistan, or Flower Garden, of Sheik Sadi of Shiraz, that "they asked a wise man, saying: Of the many celebrated trees which the Most High God has created lofty and umbrageous, they call none azad, or free, excepting the cypress, which bears no fruit; what mystery is there in this? He replied: Each has its appropriate produce, and appointed season, during the continuance of which it is fresh and blooming, and during their absence dry and withered; to neither of which states is the cypress exposed, being always flourishing; and of this nature are the azads, or religious

independents. — Fix not thy heart on that which is transitory; for the Dijlah, or Tigris, will continue to flow through Bagdad after the race of caliphs is extinct: if thy hand has plenty, be liberal as the date tree; but if it affords nothing to give away, be an azad, or free man, like the cypress.”

COMPLEMENTAL VERSES

THE PRETENSIONS OF POVERTY

Thou dost presume too much, poor needy wretch,
To claim a station in the firmament
Because thy humble cottage, or thy tub,
Nurses some lazy or pedantic virtue
In the cheap sunshine or by shady springs,
With roots and pot-herbs; where thy right hand,
Tearing those humane passions from the mind
Upon whose stocks fair blooming virtues flourish,
Degradeth nature, and benumbeth sense,
And, Gorgon-like, turns active men to stone.
We not require the dull society
Of your necessitated temperance,
Or that unnatural stupidity
That knows nor joy nor sorrow; nor your forc'd
Falsely exalted passive fortitude
Above the active. This low abject brood,
That fix their seats in mediocrity,
Become your servile minds; but we advance
Such virtues only as admit excess,
Brave, bounteous acts, regal magnificence,
All-seeing prudence, magnanimity
That knows no bound, and that heroic virtue
For which antiquity hath left no name,
But patterns only, such as Hercules,
Achilles, Theseus. Back to thy loath'd cell;
And when thou seest the new enlightened sphere,
Study to know but what those worthies were.

T. CAREW

II

WHERE I LIVED, AND WHAT I LIVED FOR

AT a certain season of our life we are accustomed to consider every spot as the possible site of a house. I have thus surveyed the country on every side within a dozen miles of where I live. In imagination I have bought all the farms in succession, for all were to be bought, and I knew their price. I walked over each farmer's premises, tasted his wild apples, discoursed on husbandry with him, took his farm at his price, at any price, mortgaging it to him in my mind; even put a higher price on it, — took everything but a deed of it, — took his word for his deed, for I dearly love to talk, — cultivated it, and him too to some extent, I trust, and withdrew when I had enjoyed it long enough, leaving him to carry it on. This experience entitled me to be regarded as a sort of real-estate broker by my friends. Wherever I sat, there I might live, and the landscape radiated from me accordingly. What is a house but a *sedes*, a seat? — better if a country seat. I discovered many a site for a house not likely to be soon improved, which some might have thought too far from the village, but to my eyes the village was too far from it. Well, there I might live, I said; and there I did live, for an hour, a summer and a winter life; saw how I could let the years run off, buffet the

winter through, and see the spring come in. The future inhabitants of this region, wherever they may place their houses, may be sure that they have been anticipated. An afternoon sufficed to lay out the land into orchard, wood-lot, and pasture, and to decide what fine oaks or pines should be left to stand before the door, and whence each blasted tree could be seen to the best advantage; and then I let it lie, fallow perchance, for a man is rich in proportion to the number of things which he can afford to let alone.

My imagination carried me so far that I even had the refusal of several farms, — the refusal was all I wanted, — but I never got my fingers burned by actual possession. The nearest that I came to actual possession was when I bought the Hollowell place, and had begun to sort my seeds, and collected materials with which to make a wheelbarrow to carry it on or off with; but before the owner gave me a deed of it, his wife — every man has such a wife — changed her mind and wished to keep it, and he offered me ten dollars to release him. Now, to speak the truth, I had but ten cents in the world, and it surpassed my arithmetic to tell, if I was that man who had ten cents, or who had a farm, or ten dollars, or all together. However, I let him keep the ten dollars and the farm too, for I had carried it far enough; or rather, to be generous, I sold him the farm for just what I gave for it, and, as he was not a rich man, made him a present of ten dollars, and still had my ten cents, and seeds, and materials for a wheelbarrow left. I found thus that I had been a rich man without any damage to my poverty. But I retained the landscape, and I have since

annually carried off what it yielded without a wheelbarrow. With respect to landscapes, —

“I am monarch of all I *survey*,
My right there is none to dispute.”

I have frequently seen a poet withdraw, having enjoyed the most valuable part of a farm, while the crusty farmer supposed that he had got a few wild apples only. Why, the owner does not know it for many years when a poet has put his farm in rhyme, the most admirable kind of invisible fence, has fairly impounded it, milked it, skimmed it, and got all the cream, and left the farmer only the skimmed milk.

The real attractions of the Hollowell farm, to me, were: its complete retirement, being about two miles from the village, half a mile from the nearest neighbor, and separated from the highway by a broad field; its bounding on the river, which the owner said protected it by its fogs from frosts in the spring, though that was nothing to me; the gray color and ruinous state of the house and barn, and the dilapidated fences, which put such an interval between me and the last occupant; the hollow and lichen-covered apple trees, gnawed by rabbits, showing what kind of neighbors I should have; but above all, the recollection I had of it from my earliest voyages up the river, when the house was concealed behind a dense grove of red maples, through which I heard the house-dog bark. I was in haste to buy it, before the proprietor finished getting out some rocks, cutting down the hollow apple trees, and grubbing up some young birches which had sprung up in the pasture, or, in short, had made any more of his improvements. To enjoy

these advantages I was ready to carry it on; like Atlas, to take the world on my shoulders, — I never heard what compensation he received for that, — and do all those things which had no other motive or excuse but that I might pay for it and be unmolested in my possession of it; for I knew all the while that it would yield the most abundant crop of the kind I wanted, if I could only afford to let it alone. But it turned out as I have said.

All that I could say, then, with respect to farming on a large scale — I have always cultivated a garden — was, that I had had my seeds ready. Many think that seeds improve with age. I have no doubt that time discriminates between the good and the bad; and when at last I shall plant, I shall be less likely to be disappointed. But I would say to my fellows, once for all, As long as possible live free and uncommitted. It makes but little difference whether you are committed to a farm or the county jail.

Old Cato, whose "*De Re Rusticâ*" is my "*Cultivator*," says, — and the only translation I have seen makes sheer nonsense of the passage, — "When you think of getting a farm turn it thus in your mind, not to buy greedily; nor spare your pains to look at it, and do not think it enough to go round it once. The oftener you go there the more it will please you, if it is good." I think I shall not buy greedily, but go round and round it as long as I live, and be buried in it first, that it may please me the more at last.

The present was my next experiment of this kind, which I purpose to describe more at length, for con-

venience putting the experience of two years into one. As I have said, I do not propose to write an ode to dejection, but to brag as lustily as chanticleer in the morning, standing on his roost, if only to wake my neighbors up.

When first I took up my abode in the woods, that is, began to spend my nights as well as days there, which, by accident, was on Independence Day, or the Fourth of July, 1845, my house was not finished for winter, but was merely a defence against the rain, without plastering or chimney, the walls being of rough, weather-stained boards, with wide chinks, which made it cool at night. The upright white hewn studs and freshly planed door and window casings gave it a clean and airy look, especially in the morning, when its timbers were saturated with dew, so that I fancied that by noon some sweet gum would exude from them. To my imagination it retained throughout the day more or less of this auroral character, reminding me of a certain house on a mountain which I had visited a year before. This was an airy and unplastered cabin, fit to entertain a travelling god, and where a goddess might trail her garments. The winds which passed over my dwelling were such as sweep over the ridges of mountains, bearing the broken strains, or celestial parts only, of terrestrial music. The morning wind forever blows, the poem of creation is uninterrupted; but few are the ears that hear it. Olympus is but the outside of the earth everywhere.

The only house I had been the owner of before, if I except a boat, was a tent, which I used occasionally when making excursions in the summer, and this is still

rolled up in my garret; but the boat, after passing from hand to hand, has gone down the stream of time. With this more substantial shelter about me, I had made some progress toward settling in the world. This frame, so slightly clad, was a sort of crystallization around me, and reacted on the builder. It was suggestive somewhat as a picture in outlines. I did not need to go outdoors to take the air, for the atmosphere within had lost none of its freshness. It was not so much within-doors as behind a door where I sat, even in the rainiest weather. The Harivansa says, "An abode without birds is like a meat without seasoning." Such was not my abode, for I found myself suddenly neighbor to the birds; not by having imprisoned one, but having caged myself near them. I was not only nearer to some of those which commonly frequent the garden and the orchard, but to those wilder and more thrilling songsters of the forest which never, or rarely, serenade a villager, — the wood thrush, the veery, the scarlet tanager, the field sparrow, the whip-poor-will, and many others.

I was seated by the shore of a small pond, about a mile and a half south of the village of Concord and somewhat higher than it, in the midst of an extensive wood between that town and Lincoln, and about two miles south of that our only field known to fame, Concord Battle Ground; but I was so low in the woods that the opposite shore, half a mile off, like the rest, covered with wood, was my most distant horizon. For the first week, whenever I looked out on the pond it impressed me like a tarn high up on the side of a mountain, its bottom far above the surface of other lakes, and, as the

sun arose, I saw it throwing off its nightly clothing of mist, and here and there, by degrees, its soft ripples or its smooth reflecting surface was revealed, while the mists, like ghosts, were stealthily withdrawing in every direction into the woods, as at the breaking up of some nocturnal conventicle. The very dew seemed to hang upon the trees later into the day than usual, as on the sides of mountains.

This small lake was of most value as a neighbor in the intervals of a gentle rain-storm in August, when, both air and water being perfectly still, but the sky overcast, mid-afternoon had all the serenity of evening, and the wood thrush sang around, and was heard from shore to shore. A lake like this is never smoother than at such a time; and the clear portion of the air above it being shallow and darkened by clouds, the water, full of light and reflections, becomes a lower heaven itself so much the more important. From a hill-top near by, where the wood had been recently cut off, there was a pleasing vista southward across the pond, through a wide indentation in the hills which form the shore there, where their opposite sides sloping toward each other suggested a stream flowing out in that direction through a wooded valley, but stream there was none. That way I looked between and over the near green hills to some distant and higher ones in the horizon, tinged with blue. Indeed, by standing on tiptoe I could catch a glimpse of some of the peaks of the still bluer and more distant mountain ranges in the northwest, those true-blue coins from heaven's own mint, and also of some portion of the village. But in other directions, even from this

point, I could not see over or beyond the woods which surrounded me. It is well to have some water in your neighborhood, to give buoyancy to and float the earth. One value even of the smallest well is, that when you look into it you see that earth is not continent but insular. This is as important as that it keeps butter cool. When I looked across the pond from this peak toward the Sudbury meadows, which in time of flood I distinguished elevated perhaps by a mirage in their seething valley, like a coin in a basin, all the earth beyond the pond appeared like a thin crust insulated and floated even by this small sheet of intervening water, and I was reminded that this on which I dwelt was but *dry land*.

Though the view from my door was still more contracted, I did not feel crowded or confined in the least. There was pasture enough for my imagination. The low shrub oak plateau to which the opposite shore arose stretched away toward the prairies of the West and the steppes of Tartary, affording ample room for all the roving families of men. "There are none happy in the world but beings who enjoy freely a vast horizon," — said Damodara, when his herds required new and larger pastures.

Both place and time were changed, and I dwelt nearer to those parts of the universe and to those eras in history which had most attracted me. Where I lived was as far off as many a region viewed nightly by astronomers. We are wont to imagine rare and delectable places in some remote and more celestial corner of the system, behind the constellation of Cassiopeia's Chair, far from noise and disturbance. I discovered that my

house actually had its site in such a withdrawn, but forever new and unprofaned, part of the universe. If it were worth the while to settle in those parts near to the Pleiades or the Hyades, to Aldebaran or Altair, then I was really there, or at an equal remoteness from the life which I had left behind, dwindled and twinkling with as fine a ray to my nearest neighbor, and to be seen only in moonless nights by him. Such was that part of creation where I had squatted; —

“There was a shepherd that did live,
And held his thoughts as high
As were the mounts whereon his flocks
Did hourly feed him by.”

What should we think of the shepherd's life if his flocks always wandered to higher pastures than his thoughts?

Every morning was a cheerful invitation to make my life of equal simplicity, and I may say innocence, with Nature herself. I have been as sincere a worshipper of Aurora as the Greeks. I got up early and bathed in the pond; that was a religious exercise, and one of the best things which I did. They say that characters were engraven on the bathing tub of King Tching-thang to this effect: “Renew thyself completely each day; do it again, and again, and forever again.” I can understand that. Morning brings back the heroic ages. I was as much affected by the faint hum of a mosquito making its invisible and unimaginable tour through my apartment at earliest dawn, when I was sitting with door and windows open, as I could be by any trumpet that ever sang of fame. It was Homer's requiem; itself an Iliad and Odyssey in the air, singing its own wrath and

wanderings. There was something cosmical about it; a standing advertisement, till forbidden, of the everlasting vigor and fertility of the world. The morning, which is the most memorable season of the day, is the awakening hour. Then there is least somnolence in us; and for an hour, at least, some part of us awakes which slumbers all the rest of the day and night. Little is to be expected of that day, if it can be called a day, to which we are not awakened by our Genius, but by the mechanical nudgings of some servitor, are not awakened by our own newly acquired force and aspirations from within, accompanied by the undulations of celestial music, instead of factory bells, and a fragrance filling the air — to a higher life than we fell asleep from; and thus the darkness bear its fruit, and prove itself to be good, no less than the light. That man who does not believe that each day contains an earlier, more sacred, and auroral hour than he has yet profaned, has despaired of life, and is pursuing a descending and darkening way. After a partial cessation of his sensuous life, the soul of man, or its organs rather, are reinvigorated each day, and his Genius tries again what noble life it can make. All memorable events, I should say, transpire in morning time and in a morning atmosphere. The Vedas say, "All intelligences awake with the morning." Poetry and art, and the fairest and most memorable of the actions of men, date from such an hour. All poets and heroes, like Memnon, are the children of Aurora, and emit their music at sunrise. To him whose elastic and vigorous thought keeps pace with the sun, the day is a perpetual morning. It matters not what the

clocks say or the attitudes and labors of men. Morning is when I am awake and there is a dawn in me. Moral reform is the effort to throw off sleep. Why is it that men give so poor an account of their day if they have not been slumbering? They are not such poor calculators. If they had not been overcome with drowsiness, they would have performed something. The millions are awake enough for physical labor; but only one in a million is awake enough for effective intellectual exertion, only one in a hundred millions to a poetic or divine life. To be awake is to be alive. I have never yet met a man who was quite awake. How could I have looked him in the face?

We must learn to reawaken and keep ourselves awake, not by mechanical aids, but by an infinite expectation of the dawn, which does not forsake us in our soundest sleep. I know of no more encouraging fact than the unquestionable ability of man to elevate his life by a conscious endeavor. It is something to be able to paint a particular picture, or to carve a statue, and so to make a few objects beautiful; but it is far more glorious to carve and paint the very atmosphere and medium through which we look, which morally we can do. To affect the quality of the day, that is the highest of arts. Every man is tasked to make his life, even in its details, worthy of the contemplation of his most elevated and critical hour. If we refused, or rather used up, such paltry information as we get, the oracles would distinctly inform us how this might be done.

I went to the woods because I wished to live deliberately, to front only the essential facts of life, and see

if I could not learn what it had to teach, and not, when I came to die, discover that I had not lived. I did not wish to live what was not life, living is so dear; nor did I wish to practise resignation, unless it was quite necessary. I wanted to live deep and suck out all the marrow of life, to live so sturdily and Spartan-like as to put to rout all that was not life, to cut a broad swath and shave close, to drive life into a corner, and reduce it to its lowest terms, and, if it proved to be mean, why then to get the whole and genuine meanness of it, and publish its meanness to the world; or if it were sublime, to know it by experience, and be able to give a true account of it in my next excursion. For most men, it appears to me, are in a strange uncertainty about it, whether it is of the devil or of God, and have *somewhat hastily* concluded that it is the chief end of man here to "glorify God and enjoy him forever."

Still we live meanly, like ants; though the fable tells us that we were long ago changed into men; like pygmies we fight with cranes; it is error upon error, and clout upon clout, and our best virtue has for its occasion a superfluous and evitable wretchedness. Our life is frittered away by detail. An honest man has hardly need to count more than his ten fingers, or in extreme cases he may add his ten toes, and lump the rest. Simplicity, simplicity, simplicity! I say, let your affairs be as two or three, and not a hundred or a thousand; instead of a million count half a dozen, and keep your accounts on your thumb-nail. In the midst of this chopping sea of civilized life, such are the clouds and storms and quicksands and thousand-and-one items to be al-

lowed for, that a man has to live, if he would not founder and go to the bottom and not make his port at all, by dead reckoning, and he must be a great calculator indeed who succeeds. Simplify, simplify. Instead of three meals a day, if it be necessary eat but one; instead of a hundred dishes, five; and reduce other things in proportion. Our life is like a German Confederacy, made up of petty states, with its boundary forever fluctuating, so that even a German cannot tell you how it is bounded at any moment. The nation itself, with all its so-called internal improvements, which, by the way are all external and superficial, is just such an unwieldy and overgrown establishment, cluttered with furniture and tripped up by its own traps, ruined by luxury and heedless expense, by want of calculation and a worthy aim, as the million households in the land; and the only cure for it, as for them, is in a rigid economy, a stern and more than Spartan simplicity of life and elevation of purpose. It lives too fast. Men think that it is essential that the *Nation* have commerce, and export ice, and talk through a telegraph, and ride thirty miles an hour, without a doubt, whether *they* do or not; but whether we should live like baboons or like men, is a little uncertain. If we do not get out sleepers, and forge rails, and devote days and nights to the work, but go to tinkering upon our *lives* to improve *them*, who will build railroads? And if railroads are not built, how shall we get to heaven in season? But if we stay at home and mind our business, who will want railroads? We do not ride on the railroad; it rides upon us. Did you ever think what those sleepers are that underlie the railroad? Each one is a man, an

Irishman, or a Yankee man. The rails are laid on them, and they are covered with sand, and the cars run smoothly over them. They are sound sleepers, I assure you. And every few years a new lot is laid down and run over; so that, if some have the pleasure of riding on a rail, others have the misfortune to be ridden upon. And when they run over a man that is walking in his sleep, a supernumerary sleeper in the wrong position, and wake him up, they suddenly stop the cars, and make a hue and cry about it, as if this were an exception. I am glad to know that it takes a gang of men for every five miles to keep the sleepers down and level in their beds as it is, for this is a sign that they may sometime get up again.

Why should we live with such hurry and waste of life? We are determined to be starved before we are hungry. Men say that a stitch in time saves nine, and so they take a thousand stitches to-day to save nine to-morrow. As for *work*, we have n't any of any consequence. We have the Saint Vitus' dance, and cannot possibly keep our heads still. If I should only give a few pulls at the parish bell-rope, as for a fire, that is, without setting the bell, there is hardly a man on his farm in the outskirts of Concord, notwithstanding that press of engagements which was his excuse so many times this morning, nor a boy, nor a woman, I might almost say, but would forsake all and follow that sound, not mainly to save property from the flames, but, if we will confess the truth, much more to see it burn, since burn it must, and we, be it known, did not set it on fire, — or to see it put out, and have a hand in it, if that is done as handsomely;

yes, even if it were the parish church itself. Hardly a man takes a half-hour's nap after dinner, but when he wakes he holds up his head and asks, "What's the news?" as if the rest of mankind had stood his sentinels. Some give directions to be waked every half-hour, doubtless for no other purpose; and then, to pay for it, they tell what they have dreamed. After a night's sleep the news is as indispensable as the breakfast. "Pray tell me anything new that has happened to a man anywhere on this globe," — and he reads it over his coffee and rolls, that a man has had his eyes gouged out this morning on the Wachito River; never dreaming the while that he lives in the dark unfathomed mammoth cave of this world, and has but the rudiment of an eye himself.

For my part, I could easily do without the post-office. I think that there are very few important communications made through it. To speak critically, I never received more than one or two letters in my life — I wrote this some years ago — that were worth the postage. The penny-post is, commonly, an institution through which you seriously offer a man that penny for his thoughts which is so often safely offered in jest. And I am sure that I never read any memorable news in a newspaper. If we read of one man robbed, or murdered, or killed by accident, or one house burned, or one vessel wrecked, or one steamboat blown up, or one cow run over on the Western Railroad, or one mad dog killed, or one lot of grasshoppers in the winter, — we never need read of another. One is enough. If you are acquainted with the principle, what do you care for a myriad instances and applications? To a philosopher all

news, as it is called, is gossip, and they who edit and read it are old women over their tea. Yet not a few are greedy after this gossip. There was such a rush, as I hear, the other day at one of the offices to learn the foreign news by the last arrival, that several large squares of plate glass belonging to the establishment were broken by the pressure, — news which I seriously think a ready wit might write a twelvemonth, or twelve years, beforehand with sufficient accuracy. As for Spain, for instance, if you know how to throw in Don Carlos and the Infanta, and Don Pedro and Seville and Granada, from time to time in the right proportions, — they may have changed the names a little since I saw the papers, — and serve up a bull-fight when other entertainments fail, it will be true to the letter, and give us as good an idea of the exact state or ruin of things in Spain as the most succinct and lucid reports under this head in the newspapers: and as for England, almost the last significant scrap of news from that quarter was the revolution of 1649; and if you have learned the history of her crops for an average year, you never need attend to that thing again, unless your speculations are of a merely pecuniary character. If one may judge who rarely looks into the newspapers, nothing new does ever happen in foreign parts, a French revolution not excepted.

What news! how much more important to know what that is which was never old! “Kieou-he-yu (great dignity of the state of Wei) sent a man to Khoung-tseu to know his news. Khoung-tseu caused the messenger to be seated near him, and questioned him in these terms:

What is your master doing? The messenger answered with respect: My master desires to diminish the number of his faults, but he cannot come to the end of them. The messenger being gone, the philosopher remarked: What a worthy messenger! What a worthy messenger!" The preacher, instead of vexing the ears of drowsy farmers on their day of rest at the end of the week, — for Sunday is the fit conclusion of an ill-spent week, and not the fresh and brave beginning of a new one, — with this one other draggle-tail of a sermon, should shout with thundering voice, "Pause! Avast! Why so seeming fast, but deadly slow?"

Shams and delusions are esteemed for soundest truths, while reality is fabulous. If men would steadily observe realities only, and not allow themselves to be deluded, life, to compare it with such things as we know, would be like a fairy tale and the Arabian Nights' Entertainments. If we respected only what is inevitable and has a right to be, music and poetry would resound along the streets. When we are unhurried and wise, we perceive that only great and worthy things have any permanent and absolute existence, that petty fears and petty pleasures are but the shadow of the reality. This is always exhilarating and sublime. By closing the eyes and slumbering, and consenting to be deceived by shows, men establish and confirm their daily life of routine and habit everywhere, which still is built on purely illusory foundations. Children, who play life, discern its true law and relations more clearly than men, who fail to live it worthily, but who think that they are wiser by experience, that is, by failure. I

have read in a Hindoo book, that "there was a king's son, who, being expelled in infancy from his native city, was brought up by a forester, and, growing up to maturity in that state, imagined himself to belong to the barbarous race with which he lived. One of his father's ministers having discovered him, revealed to him what he was, and the misconception of his character was removed, and he knew himself to be a prince. So soul," continues the Hindoo philosopher, "from the circumstances in which it is placed, mistakes its own character, until the truth is revealed to it by some holy teacher, and then it knows itself to be *Brahme*." I perceive that we inhabitants of New England live this mean life that we do because our vision does not penetrate the surface of things. We think that that *is* which *appears* to be. If a man should walk through this town and see only the reality, where, think you, would the "Mill-dam" go to? If he should give us an account of the realities he beheld there, we should not recognize the place in his description. Look at a meeting-house, or a court-house, or a jail, or a shop, or a dwelling-house, and say what that thing really is before a true gaze, and they would all go to pieces in your account of them. Men esteem truth remote, in the outskirts of the system, behind the farthest star, before Adam and after the last man. In eternity there is indeed something true and sublime. But all these times and places and occasions are now and here. God himself culminates in the present moment, and will never be more divine in the lapse of all the ages. And we are enabled to apprehend at all what is sublime and noble only by the perpetual

instilling and drenching of the reality that surrounds us. The universe constantly and obediently answers to our conceptions; whether we travel fast or slow, the track is laid for us. Let us spend our lives in conceiving then. The poet or the artist never yet had so fair and noble a design but some of his posterity at least could accomplish it.

Let us spend one day as deliberately as Nature, and not be thrown off the track by every nutshell and mosquito's wing that falls on the rails. Let us rise early and fast, or break fast, gently and without perturbation; let company come and let company go, let the bells ring and the children cry, — determined to make a day of it. Why should we knock under and go with the stream? Let us not be upset and overwhelmed in that terrible rapid and whirlpool called a dinner, situated in the meridian shallows. Weather this danger and you are safe, for the rest of the way is down hill. With unrelaxed nerves, with morning vigor, sail by it, looking another way, tied to the mast like Ulysses. If the engine whistles, let it whistle till it is hoarse for its pains. If the bell rings, why should we run? We will consider what kind of music they are like. Let us settle ourselves, and work and wedge our feet downward through the mud and slush of opinion, and prejudice, and tradition, and delusion, and appearance, that alluvion which covers the globe, through Paris and London, through New York and Boston and Concord, through Church and State, through poetry and philosophy and religion, till we come to a hard bottom and rocks in place, which we can call *reality*, and say, This is, and no mistake; and

then begin, having a *point d'appui*, below freshet and frost and fire, a place where you might find a wall or a state, or set a lamp-post safely, or perhaps a gauge, not a Nilometer, but a Realometer, that future ages might know how deep a freshet of shams and appearances had gathered from time to time. If you stand right fronting and face to face to a fact, you will see the sun glimmer on both its surfaces, as if it were a cimeter, and feel its sweet edge dividing you through the heart and marrow, and so you will happily conclude your mortal career. Be it life or death, we crave only reality. If we are really dying, let us hear the rattle in our throats and feel cold in the extremities; if we are alive, let us go about our business.

Time is but the stream I go a-fishing in. I drink at it; but while I drink I see the sandy bottom and detect how shallow it is. Its thin current slides away, but eternity remains. I would drink deeper; fish in the sky, whose bottom is pebbly with stars. I cannot count one. I know not the first letter of the alphabet. I have always been regretting that I was not as wise as the day I was born. The intellect is a cleaver; it discerns and rifts its way into the secret of things. I do not wish to be any more busy with my hands than is necessary. My head is hands and feet. I feel all my best faculties concentrated in it. My instinct tells me that my head is an organ for burrowing, as some creatures use their snout and fore paws, and with it I would mine and burrow my way through these hills. I think that the richest vein is somewhere hereabouts; so by the divining-rod and thin rising vapors I judge; and here I will begin to mine.

III

READING

WITH a little more deliberation in the choice of their pursuits, all men would perhaps become essentially students and observers, for certainly their nature and destiny are interesting to all alike. In accumulating property for ourselves or our posterity, in founding a family or a state, or acquiring fame even, we are mortal; but in dealing with truth we are immortal, and need fear no change nor accident. The oldest Egyptian or Hindoo philosopher raised a corner of the veil from the statue of the divinity; and still the trembling robe remains raised, and I gaze upon as fresh a glory as he did, since it was I in him that was then so bold, and it is he in me that now reviews the vision. No dust has settled on that robe; no time has elapsed since that divinity was revealed. That time which we really improve, or which is improvable, is neither past, present, nor future.

My residence was more favorable, not only to thought, but to serious reading, than a university; and though I was beyond the range of the ordinary circulating library, I had more than ever come within the influence of those books which circulate round the world, whose sentences were first written on bark, and are now merely copied from time to time on to linen paper. Says the poet Mîr

Camar Uddîn Mast, "Being seated, to run through the region of the spiritual world; I have had this advantage in books. To be intoxicated by a single glass of wine; I have experienced this pleasure when I have drunk the liquor of the esoteric doctrines." I kept Homer's *Iliad* on my table through the summer, though I looked at his page only now and then. Incessant labor with my hands, at first, for I had my house to finish and my beans to hoe at the same time, made more study impossible. Yet I sustained myself by the prospect of such reading in future. I read one or two shallow books of travel in the intervals of my work, till that employment made me ashamed of myself, and I asked where it was then that *I* lived.

The student may read Homer or Æschylus in the Greek without danger of dissipation or luxuriousness, for it implies that he in some measure emulate their heroes, and consecrate morning hours to their pages. The heroic books, even if printed in the character of our mother tongue, will always be in a language dead to degenerate times; and we must laboriously seek the meaning of each word and line, conjecturing a larger sense than common use permits out of what wisdom and valor and generosity we have. The modern cheap and fertile press, with all its translations, has done little to bring us nearer to the heroic writers of antiquity. They seem as solitary, and the letter in which they are printed as rare and curious, as ever. It is worth the expense of youthful days and costly hours, if you learn only some words of an ancient language, which are raised out of the trivialness of the street, to be perpetual

suggestions and provocations. It is not in vain that the farmer remembers and repeats the few Latin words which he has heard. Men sometimes speak as if the study of the classics would at length make way for more modern and practical studies; but the adventurous student will always study classics, in whatever language they may be written and however ancient they may be. For what are the classics but the noblest recorded thoughts of man? They are the only oracles which are not decayed, and there are such answers to the most modern inquiry in them as Delphi and Dodona never gave. We might as well omit to study Nature because she is old. To read well, that is, to read true books in a true spirit, is a noble exercise, and one that will task the reader more than any exercise which the customs of the day esteem. It requires a training such as the athletes underwent, the steady intention almost of the whole life to this object. Books must be read as deliberately and reservedly as they were written. It is not enough even to be able to speak the language of that nation by which they are written, for there is a memorable interval between the spoken and the written language, the language heard and the language read. The one is commonly transitory, a sound, a tongue, a dialect merely, almost brutish, and we learn it unconsciously, like the brutes, of our mothers. The other is the maturity and experience of that; if that is our mother tongue, this is our father tongue, a reserved and select expression, too significant to be heard by the ear, which we must be born again in order to speak. The crowds of men who merely *spoke* the Greek and Latin tongues in the Mid-

dle Ages were not entitled by the accident of birth to *read* the works of genius written in those languages; for these were not written in that Greek or Latin which they knew, but in the select language of literature. They had not learned the nobler dialects of Greece and Rome, but the very materials on which they were written were waste paper to them, and they prized instead a cheap contemporary literature. But when the several nations of Europe had acquired distinct though rude written languages of their own, sufficient for the purposes of their rising literatures, then first learning revived, and scholars were enabled to discern from that remoteness the treasures of antiquity. What the Roman and Grecian multitude could not *hear*, after the lapse of ages a few scholars *read*, and a few scholars only are still reading it.

However much we may admire the orator's occasional bursts of eloquence, the noblest written words are commonly as far behind or above the fleeting spoken language as the firmament with its stars is behind the clouds. *There* are the stars, and they who can may read them. The astronomers forever comment on and observe them. They are not exhalations like our daily colloquies and vaporous breath. What is called eloquence in the forum is commonly found to be rhetoric in the study. The orator yields to the inspiration of a transient occasion, and speaks to the mob before him, to those who can *hear* him; but the writer, whose more equable life is his occasion, and who would be distracted by the event and the crowd which inspire the orator, speaks to the intellect and heart of mankind, to all in any age who can *understand* him.

No wonder that Alexander carried the Iliad with him on his expeditions in a precious casket. A written word is the choicest of relics. It is something at once more intimate with us and more universal than any other work of art. It is the work of art nearest to life itself. It may be translated into every language, and not only be read but actually breathed from all human lips; — not be represented on canvas or in marble only, but be carved out of the breath of life itself. The symbol of an ancient man's thought becomes a modern man's speech. Two thousand summers have imparted to the monuments of Grecian literature, as to her marbles, only a maturer golden and autumnal tint, for they have carried their own serene and celestial atmosphere into all lands to protect them against the corrosion of time. Books are the treasured wealth of the world and the fit inheritance of generations and nations. Books, the oldest and the best, stand naturally and rightfully on the shelves of every cottage. They have no cause of their own to plead, but while they enlighten and sustain the reader his common sense will not refuse them. Their authors are a natural and irresistible aristocracy in every society, and, more than kings or emperors, exert an influence on mankind. When the illiterate and perhaps scornful trader has earned by enterprise and industry his coveted leisure and independence, and is admitted to the circles of wealth and fashion, he turns inevitably at last to those still higher but yet inaccessible circles of intellect and genius, and is sensible only of the imperfection of his culture and the vanity and insufficiency of all his riches, and further proves his good

sense by the pains which he takes to secure for his children that intellectual culture whose want he so keenly feels; and thus it is that he becomes the founder of a family.

Those who have not learned to read the ancient classics in the language in which they were written must have a very imperfect knowledge of the history of the human race; for it is remarkable that no transcript of them has ever been made into any modern tongue, unless our civilization itself may be regarded as such a transcript. Homer has never yet been printed in English, nor Æschylus, nor Virgil even, — works as refined, as solidly done, and as beautiful almost as the morning itself; for later writers, say what we will of their genius, have rarely, if ever, equalled the elaborate beauty and finish and the lifelong and heroic literary labors of the ancients. They only talk of forgetting them who never knew them. It will be soon enough to forget them when we have the learning and the genius which will enable us to attend to and appreciate them. That age will be rich indeed when those relics which we call Classics, and the still older and more than classic but even less known Scriptures of the nations, shall have still further accumulated, when the Vaticans shall be filled with Vedas and Zendavestas and Bibles, with Homers and Dantes and Shakespeares, and all the centuries to come shall have successively deposited their trophies in the forum of the world. By such a pile we may hope to scale heaven at last.

The works of the great poets have never yet been read by mankind, for only great poets can read them.

They have only been read as the multitude read the stars, at most astrologically, not astronomically. Most men have learned to read to serve a paltry convenience, as they have learned to cipher in order to keep accounts and not be cheated in trade; but of reading as a noble intellectual exercise they know little or nothing; yet this only is reading, in a high sense, not that which lulls us as a luxury and suffers the nobler faculties to sleep the while, but what we have to stand on tip-toe to read and devote our most alert and wakeful hours to.

I think that having learned our letters we should read the best that is in literature, and not be forever repeating our a-b-abs, and words of one syllable, in the fourth or fifth classes, sitting on the lowest and foremost form all our lives. Most men are satisfied if they read or hear read, and perchance have been convicted by the wisdom of one good book, the Bible, and for the rest of their lives vegetate and dissipate their faculties in what is called easy reading. There is a work in several volumes in our Circulating Library entitled "Little Reading," which I thought referred to a town of that name which I had not been to. There are those who, like cormorants and ostriches, can digest all sorts of this, even after the fullest dinner of meats and vegetables, for they suffer nothing to be wasted. If others are the machines to provide this provender, they are the machines to read it. They read the nine thousandth tale about Zebulon and Sophronia, and how they loved as none had ever loved before, and neither did the course of their true love run smooth,—at any rate, how it did run and stumble, and get up again and go on! how some poor unfortunate

got up on to a steeple, who had better never have gone up as far as the belfry; and then, having needlessly got him up there, the happy novelist rings the bell for all the world to come together and hear, O dear! how he did get down again! For my part, I think that they had better metamorphose all such aspiring heroes of universal noveldom into man weather-cocks, as they used to put heroes among the constellations, and let them swing round there till they are rusty, and not come down at all to bother honest men with their pranks. The next time the novelist rings the bell I will not stir though the meeting-house burn down. "The Skip of the Tip-Toe-Hop, a Romance of the Middle Ages, by the celebrated author of 'Tittle-Tol-Tan,' to appear in monthly parts; a great rush; don't all come together." All this they read with saucer eyes, and erect and primitive curiosity, and with unwearied gizzard, whose corrugations even yet need no sharpening, just as some little four-year-old bencher his two-cent gilt-covered edition of Cinderella, — without any improvement, that I can see, in the pronunciation, or accent, or emphasis, or any more skill in extracting or inserting the moral. The result is dullness of sight, a stagnation of the vital circulations, and a general deliquium and sloughing off of all the intellectual faculties. This sort of gingerbread is baked daily and more sedulously than pure wheat or rye-and-Indian in almost every oven, and finds a surer market.

The best books are not read even by those who are called good readers. What does our Concord culture amount to? There is in this town, with a very few exceptions, no taste for the best or for very good books

even in English literature, whose words all can read and spell. Even the college-bred and so-called liberally educated men here and elsewhere have really little or no acquaintance with the English classics; and as for the recorded wisdom of mankind, the ancient classics and Bibles, which are accessible to all who will know of them, there are the feeblest efforts anywhere made to become acquainted with them. I know a woodchopper, of middle age, who takes a French paper, not for news as he says, for he is above that, but to "keep himself in practice," he being a Canadian by birth; and when I ask him what he considers the best thing he can do in this world, he says, beside this, to keep up and add to his English. This is about as much as the college-bred generally do or aspire to do, and they take an English paper for the purpose. One who has just come from reading perhaps one of the best English books will find how many with whom he can converse about it? Or suppose he comes from reading a Greek or Latin classic in the original, whose praises are familiar even to the so-called illiterate; he will find nobody at all to speak to, but must keep silence about it. Indeed, there is hardly the professor in our colleges, who, if he has mastered the difficulties of the language, has proportionally mastered the difficulties of the wit and poetry of a Greek poet, and has any sympathy to impart to the alert and heroic reader; and as for the sacred Scriptures, or Bibles of mankind, who in this town can tell me even their titles? Most men do not know that any nation but the Hebrews have had a scripture. A man, any man, will go considerably out of his way to pick up a silver

dollar; but here are golden words, which the wisest men of antiquity have uttered, and whose worth the wise of every succeeding age have assured us of; — and yet we learn to read only as far as Easy Reading, the primers and class-books, and when we leave school, the “Little Reading,” and story-books, which are for boys and beginners; and our reading, our conversation and thinking, are all on a very low level, worthy only of pygmies and manikins.

I aspire to be acquainted with wiser men than this our Concord soil has produced, whose names are hardly known here. Or shall I hear the name of Plato and never read his book? As if Plato were my townsman and I never saw him, — my next neighbor and I never heard him speak or attended to the wisdom of his words. But how actually is it? His Dialogues, which contain what was immortal in him, lie on the next shelf, and yet I never read them. We are underbred and low-lived and illiterate; and in this respect I confess I do not make any very broad distinction between the illiterateness of my townsman who cannot read at all and the illiterateness of him who has learned to read only what is for children and feeble intellects. We should be as good as the worthies of antiquity, but partly by first knowing how good they were. We are a race of tit-men, and soar but little higher in our intellectual flights than the columns of the daily paper.

It is not all books that are as dull as their readers. There are probably words addressed to our condition exactly, which, if we could really hear and understand, would be more salutary than the morning or the spring

to our lives, and possibly put a new aspect on the face of things for us. How many a man has dated a new era in his life from the reading of a book! The book exists for us, perchance, which will explain our miracles and reveal new ones. The at present unutterable things we may find somewhere uttered. These same questions that disturb and puzzle and confound us have in their turn occurred to all the wise men; not one has been omitted; and each has answered them, according to his ability, by his words and his life. Moreover, with wisdom we shall learn liberality. The solitary hired man on a farm in the outskirts of Concord, who has had his second birth and peculiar religious experience, and is driven as he believes into silent gravity and exclusiveness by his faith, may think it is not true; but Zoroaster, thousands of years ago, travelled the same road and had the same experience; but he, being wise, knew it to be universal, and treated his neighbors accordingly, and is even said to have invented and established worship among men. Let him humbly commune with Zoroaster then, and through the liberalizing influence of all the worthies, with Jesus Christ himself, and let "our church" go by the board.

We boast that we belong to the Nineteenth Century and are making the most rapid strides of any nation. But consider how little this village does for its own culture. I do not wish to flatter my townsmen, nor to be flattered by them, for that will not advance either of us. We need to be provoked, — goaded like oxen, as we are, into a trot. We have a comparatively decent system of common schools, schools for infants only; but

excepting the half-starved Lyceum in the winter, and latterly the puny beginning of a library suggested by the State, no school for ourselves. We spend more on almost any article of bodily aliment or ailment than on our mental aliment. It is time that we had uncommon schools, that we did not leave off our education when we begin to be men and women. It is time that villages were universities, and their elder inhabitants the fellows of universities, with leisure—if they are, indeed, so well off—to pursue liberal studies the rest of their lives. Shall the world be confined to one Paris or one Oxford forever? Cannot students be boarded here and get a liberal education under the skies of Concord? Can we not hire some Abélard to lecture to us? Alas! what with foddering the cattle and tending the store, we are kept from school too long, and our education is sadly neglected. In this country, the village should in some respects take the place of the nobleman of Europe. It should be the patron of the fine arts. It is rich enough. It wants only the magnanimity and refinement. It can spend money enough on such things as farmers and traders value, but it is thought Utopian to propose spending money for things which more intelligent men know to be of far more worth. This town has spent seventeen thousand dollars on a town-house, thank fortune or politics, but probably it will not spend so much on living wit, the true meat to put into that shell, in a hundred years. The one hundred and twenty-five dollars annually subscribed for a Lyceum in the winter is better spent than any other equal sum raised in the town. If we live in the Nineteenth Century, why should we not enjoy

the advantages which the Nineteenth Century offers? Why should our life be in any respect provincial? If we will read newspapers, why not skip the gossip of Boston and take the best newspaper in the world at once? — not be sucking the pap of “neutral family” papers, or browsing “Olive-Branches” here in New England. Let the reports of all the learned societies come to us, and we will see if they know anything. Why should we leave it to Harper & Brothers and Redding & Co. to select our reading? As the nobleman of cultivated taste surrounds himself with whatever conduces to his culture, — genius — learning — wit — books — paintings — statuary — music — philosophical instruments, and the like; so let the village do, — not stop short at a pedagogue, a parson, a sexton, a parish library, and three selectmen, because our Pilgrim forefathers got through a cold winter once on a bleak rock with these. To act collectively is according to the spirit of our institutions; and I am confident that, as our circumstances are more flourishing, our means are greater than the nobleman’s. New England can hire all the wise men in the world to come and teach her, and board them round the while, and not be provincial at all. That is the *uncommon* school we want. Instead of noblemen, let us have noble villages of men. If it is necessary, omit one bridge over the river, go round a little there, and throw one arch at least over the darker gulf of ignorance which surrounds us.

IV

SOUNDS

BUT while we are confined to books, though the most select and classic, and read only particular written languages, which are themselves but dialects and provincial, we are in danger of forgetting the language which all things and events speak without metaphor, which alone is copious and standard. Much is published, but little printed. The rays which stream through the shutter will be no longer remembered when the shutter is wholly removed. No method nor discipline can supersede the necessity of being forever on the alert. What is a course of history or philosophy, or poetry, no matter how well selected, or the best society, or the most admirable routine of life, compared with the discipline of looking always at what is to be seen? Will you be a reader, a student merely, or a seer? Read your fate, see what is before you, and walk on into futurity.

I did not read books the first summer; I hoed beans. Nay, I often did better than this. There were times when I could not afford to sacrifice the bloom of the present moment to any work, whether of the head or hands. I love a broad margin to my life. Sometimes, in a summer morning, having taken my accustomed bath, I sat in my sunny doorway from sunrise till noon, rapt in a reverie, amidst the pines and hickories and

sumachs, in undisturbed solitude and stillness, while the birds sang around or flitted noiseless through the house, until by the sun falling in at my west window, or the noise of some traveller's wagon on the distant highway, I was reminded of the lapse of time. I grew in those seasons like corn in the night, and they were far better than any work of the hands would have been. They were not time subtracted from my life, but so much over and above my usual allowance. I realized what the Orientals mean by contemplation and the forsaking of works. For the most part, I minded not how the hours went. The day advanced as if to light some work of mine; it was morning, and lo, now it is evening, and nothing memorable is accomplished. Instead of singing like the birds, I silently smiled at my incessant good fortune. As the sparrow had its trill, sitting on the hickory before my door, so had I my chuckle or suppressed warble which he might hear out of my nest. My days were not days of the week, bearing the stamp of any heathen deity, nor were they minced into hours and fretted by the ticking of a clock; for I lived like the Puri Indians, of whom it is said that "for yesterday, to-day, and to-morrow they have only one word, and they express the variety of meaning by pointing backward for yesterday, forward for to-morrow, and overhead for the passing day." This was sheer idleness to my fellow-townsmen, no doubt; but if the birds and flowers had tried me by their standard, I should not have been found wanting. A man must find his occasions in himself, it is true. The natural day is very calm, and will hardly reprove his indolence.

I had this advantage, at least, in my mode of life, over those who were obliged to look abroad for amusement, to society and the theatre, that my life itself was become my amusement and never ceased to be novel. It was a drama of many scenes and without an end. If we were always, indeed, getting our living, and regulating our lives according to the last and best mode we had learned, we should never be troubled with ennui. Follow your genius closely enough, and it will not fail to show you a fresh prospect every hour. Housework was a pleasant pastime. When my floor was dirty, I rose early, and, setting all my furniture out of doors on the grass, bed and bedstead making but one budget, dashed water on the floor, and sprinkled white sand from the pond on it, and then with a broom scrubbed it clean and white; and by the time the villagers had broken their fast the morning sun had dried my house sufficiently to allow me to move in again, and my meditations were almost uninterrupted. It was pleasant to see my whole household effects out on the grass, making a little pile like a gypsy's pack, and my three-legged table, from which I did not remove the books and pen and ink, standing amid the pines and hickories. They seemed glad to get out themselves, and as if unwilling to be brought in. I was sometimes tempted to stretch an awning over them and take my seat there. It was worth the while to see the sun shine on these things, and hear the free wind blow on them; so much more interesting most familiar objects look out of doors than in the house. A bird sits on the next bough, life-everlasting grows under the table, and blackberry vines run round

its legs; pine cones, chestnut burs, and strawberry leaves are strewn about. It looked as if this was the way these forms came to be transferred to our furniture, to tables, chairs, and bedsteads, — because they once stood in their midst.

My house was on the side of a hill, immediately on the edge of the larger wood, in the midst of a young forest of pitch pines and hickories, and half a dozen rods from the pond, to which a narrow footpath led down the hill. In my front yard grew the strawberry, blackberry, and life-everlasting, johnswort and golden-rod, shrub oaks and sand cherry, blueberry and ground-nut. Near the end of May, the sand cherry (*Cerasus pumila*) adorned the sides of the path with its delicate flowers arranged in umbels cylindrically about its short stems, which last, in the fall, weighed down with good-sized and handsome cherries, fell over in wreaths like rays on every side. I tasted them out of compliment to Nature, though they were scarcely palatable. The sumach (*Rhus glabra*) grew luxuriantly about the house, pushing up through the embankment which I had made, and growing five or six feet the first season. Its broad pinnate tropical leaf was pleasant though strange to look on. The large buds, suddenly pushing out late in the spring from dry sticks which had seemed to be dead, developed themselves as by magic into graceful green and tender boughs, an inch in diameter; and sometimes, as I sat at my window, so heedlessly did they grow and tax their weak joints, I heard a fresh and tender bough suddenly fall like a fan to the ground, when there was not a breath of air stirring, broken off

by its own weight. In August, the large masses of berries, which, when in flower, had attracted many wild bees, gradually assumed their bright velvety crimson hue, and by their weight again bent down and broke the tender limbs.

As I sit at my window this summer afternoon, hawks are circling about my clearing; the tantivy of wild pigeons, flying by twos and threes athwart my view, or perching restless on the white pine boughs behind my house, gives a voice to the air; a fish hawk dimples the glassy surface of the pond and brings up a fish; a mink steals out of the marsh before my door and seizes a frog by the shore; the sedge is bending under the weight of the reed-birds flitting hither and thither; and for the last half-hour I have heard the rattle of railroad cars, now dying away and then reviving like the beat of a partridge, conveying travellers from Boston to the country. For I did not live so out of the world as that boy who, as I hear, was put out to a farmer in the east part of the town, but ere long ran away and came home again, quite down at the heel and homesick. He had never seen such a dull and out-of-the-way place; the folks were all gone off; why, you could n't even hear the whistle! I doubt if there is such a place in Massachusetts now: —

“In truth, our village has become a butt
For one of those fleet railroad shafts, and o'er
Our peaceful plain its soothing sound is — Concord.”

The Fitchburg Railroad touches the pond about a hundred rods south of where I dwell. I usually go to the

village along its causeway, and am, as it were, related to society by this link. The men on the freight trains, who go over the whole length of the road, bow to me as to an old acquaintance, they pass me so often, and apparently they take me for an employee; and so I am. I too would fain be a track-repairer somewhere in the orbit of the earth.

The whistle of the locomotive penetrates my woods summer and winter, sounding like the scream of a hawk sailing over some farmer's yard, informing me that many restless city merchants are arriving within the circle of the town, or adventurous country traders from the other side. As they come under one horizon, they shout their warning to get off the track to the other, heard sometimes through the circles of two towns. Here come your groceries, country; your rations, countrymen! Nor is there any man so independent on his farm that he can say them nay. And here's your pay for them! screams the countryman's whistle; timber like long battering-rams going twenty miles an hour against the city's walls, and chairs enough to seat all the weary and heavy-laden that dwell within them. With such huge and lumbering civility the country hands a chair to the city. All the Indian huckleberry hills are stripped, all the cranberry meadows are raked into the city. Up comes the cotton, down goes the woven cloth; up comes the silk, down goes the woollen; up come the books, but down goes the wit that writes them.

When I meet the engine with its train of cars moving off with planetary motion, — or, rather, like a comet, for the beholder knows not if with that velocity and with that

direction it will ever revisit this system, since its orbit does not look like a returning curve, — with its steam cloud like a banner streaming behind in golden and silver wreaths, like many a downy cloud which I have seen, high in the heavens, unfolding its masses to the light, — as if this travelling demigod, this cloud-compeller, would ere long take the sunset sky for the livery of his train; when I hear the iron horse make the hills echo with his snort like thunder, shaking the earth with his feet, and breathing fire and smoke from his nostrils (what kind of winged horse or fiery dragon they will put into the new Mythology I don't know), it seems as if the earth had got a race now worthy to inhabit it. If all were as it seems, and men made the elements their servants for noble ends! If the cloud that hangs over the engine were the perspiration of heroic deeds, or as beneficent as that which floats over the farmer's fields, then the elements and Nature herself would cheerfully accompany men on their errands and be their escort.

I watch the passage of the morning cars with the same feeling that I do the rising of the sun, which is hardly more regular. Their train of clouds stretching far behind and rising higher and higher, going to heaven while the cars are going to Boston, conceals the sun for a minute and casts my distant field into the shade, a celestial train beside which the petty train of cars which hugs the earth is but the barb of the spear. The stabler of the iron horse was up early this winter morning by the light of the stars amid the mountains, to fodder and harness his steed. Fire, too, was awakened thus early to put the vital heat in him and get him off. If the enter-

prise were as innocent as it is early! If the snow lies deep, they strap on his snowshoes, and, with the giant plow, plow a furrow from the mountains to the sea-board, in which the cars, like a following drill-barrow, sprinkle all the restless men and floating merchandise in the country for seed. All day the fire-steed flies over the country, stopping only that his master may rest, and I am awakened by his tramp and defiant snort at midnight, when in some remote glen in the woods he fronts the elements incased in ice and snow; and he will reach his stall only with the morning star, to start once more on his travels without rest or slumber. Or perchance, at evening, I hear him in his stable blowing off the superfluous energy of the day, that he may calm his nerves and cool his liver and brain for a few hours of iron slumber. If the enterprise were as heroic and commanding as it is protracted and unwearied!

Far through unfrequented woods on the confines of towns, where once only the hunter penetrated by day, in the darkest night dart these bright saloons without the knowledge of their inhabitants; this moment stopping at some brilliant station-house in town or city, where a social crowd is gathered, the next in the Dismal Swamp, scaring the owl and fox. The startings and arrivals of the cars are now the epochs in the village day. They go and come with such regularity and precision, and their whistle can be heard so far, that the farmers set their clocks by them, and thus one well-conducted institution regulates a whole country. Have not men improved somewhat in punctuality since the railroad was invented? Do they not talk and think faster in the

depot than they did in the stage-office? There is something electrifying in the atmosphere of the former place. I have been astonished at the miracles it has wrought; that some of my neighbors, who, I should have prophesied, once for all, would never get to Boston by so prompt a conveyance, are on hand when the bell rings. To do things "railroad fashion" is now the byword; and it is worth the while to be warned so often and so sincerely by any power to get off its track. There is no stopping to read the riot act, no firing over the heads of the mob, in this case. We have constructed a fate, an *Atropos*, that never turns aside. (Let that be the name of your engine.) Men are advertised that at a certain hour and minute these bolts will be shot toward particular points of the compass; yet it interferes with no man's business, and the children go to school on the other track. We live the steadier for it. We are all educated thus to be sons of Tell. The air is full of invisible bolts. Every path but your own is the path of fate. Keep on your own track, then.

What recommends commerce to me is its enterprise and bravery. It does not clasp its hands and pray to Jupiter. I see these men every day go about their business with more or less courage and content, doing more even than they suspect, and perchance better employed than they could have consciously devised. I am less affected by their heroism who stood up for half an hour in the front line at Buena Vista, than by the steady and cheerful valor of the men who inhabit the snow-plow for their winter quarters; who have not merely the three-o'-clock-in-the-morning courage, which Bonaparte

thought was the rarest, but whose courage does not go to rest so early, who go to sleep only when the storm sleeps or the sinews of their iron steed are frozen. On this morning of the Great Snow, perchance, which is still raging and chilling men's blood, I hear the muffled tone of their engine bell from out the fog bank of their chilled breath, which announces that the cars *are coming*, without long delay, notwithstanding the veto of a New England northeast snow-storm, and I behold the plowmen covered with snow and rime, their heads peering above the mould-board which is turning down other than daisies and the nests of field mice, like bowlders of the Sierra Nevada, that occupy an outside place in the universe.

Commerce is unexpectedly confident and serene, alert, adventurous, and unwearied. It is very natural in its methods withal, far more so than many fantastic enterprises and sentimental experiments, and hence its singular success. I am refreshed and expanded when the freight train rattles past me, and I smell the stores which go dispensing their odors all the way from Long Wharf to Lake Champlain, reminding me of foreign parts, of coral reefs, and Indian oceans, and tropical climes, and the extent of the globe. I feel more like a citizen of the world at the sight of the palm-leaf which will cover so many flaxen New England heads the next summer, the Manilla hemp and cocoanut husks, the old junk, gunny bags, scrap iron, and rusty nails. This carload of torn sails is more legible and interesting now than if they should be wrought into paper and printed books. Who can write so graphically the history of the storms they

have weathered as these rents have done? They are proof-sheets which need no correction. Here goes lumber from the Maine woods, which did not go out to sea in the last freshet, risen four dollars on the thousand because of what did go out or was split up; pine, spruce, cedar, — first, second, third, and fourth qualities, so lately all of one quality, to wave over the bear, and moose, and caribou. Next rolls Thomaston lime, a prime lot, which will get far among the hills before it gets slacked. These rags in bales, of all hues and qualities, the lowest condition to which cotton and linen descend, the final result of dress, — of patterns which are now no longer cried up, unless it be in Milwaukee, as those splendid articles, English, French, or American prints, ginghams, muslins, etc., gathered from all quarters both of fashion and poverty, going to become paper of one color or a few shades only, on which, forsooth, will be written tales of real life, high and low, and founded on fact! This closed car smells of salt fish, the strong New England and commercial scent, reminding me of the Grand Banks and the fisheries. Who has not seen a salt fish, thoroughly cured for this world, so that nothing can spoil it, and putting the perseverance of the saints to the blush? with which you may sweep or pave the streets, and split your kindlings, and the teamster shelter himself and his lading against sun, wind, and rain behind it, — and the trader, as a Concord trader once did, hang it up by his door for a sign when he commences business, until at last his oldest customer cannot tell surely whether it be animal, vegetable, or mineral, and yet it shall be as pure as a snowflake, and if it be

put into a pot and boiled, will come out an excellent dun-fish for a Saturday's dinner. Next Spanish hides, with the tails still preserving their twist and the angle of elevation they had when the oxen that wore them were careering over the pampas of the Spanish Main, — a type of all obstinacy, and evincing how almost hopeless and incurable are all constitutional vices. I confess, that practically speaking, when I have learned a man's real disposition, I have no hopes of changing it for the better or worse in this state of existence. As the Orientals say, "A cur's tail may be warmed, and pressed, and bound round with ligatures, and after a twelve years' labor bestowed upon it, still it will retain its natural form." The only effectual cure for such inveteracies as these tails exhibit is to make glue of them, which I believe is what is usually done with them, and then they will stay put and stick. Here is a hogshead of molasses or of brandy directed to John Smith, Cuttingsville, Vermont, some trader among the Green Mountains, who imports for the farmers near his clearing, and now perchance stands over his bulkhead and thinks of the last arrivals on the coast, how they may affect the price for him, telling his customers this moment, as he has told them twenty times before this morning, that he expects some by the next train of prime quality. It is advertised in the Cuttingsville Times.

While these things go up other things come down. Warned by the whizzing sound, I look up from my book and see some tall pine, hewn on far northern hills, which has winged its way over the Green Mountains and the Connecticut, shot like an arrow through the township

within ten minutes, and scarce another eye beholds it;
going

“to be the mast
Of some great ammiral.”

And hark! here comes the cattle-train bearing the cattle of a thousand hills, sheepcots, stables, and cow-yards in the air, drovers with their sticks, and shepherd boys in the midst of their flocks, all but the mountain pastures, whirled along like leaves blown from the mountains by the September gales. The air is filled with the bleating of calves and sheep, and the hustling of oxen, as if a pastoral valley were going by. When the old bell-wether at the head rattles his bell, the mountains do indeed skip like rams and the little hills like lambs. A carload of drovers, too, in the midst, on a level with their droves now, their vocation gone, but still clinging to their useless sticks as their badge of office. But their dogs, where are they? It is a stampede to them; they are quite thrown out; they have lost the scent. Methinks I hear them barking behind the Peterboro' Hills, or panting up the western slope of the Green Mountains. They will not be in at the death. Their vocation, too, is gone. Their fidelity and sagacity are below par now. They will slink back to their kennels in disgrace, or perchance run wild and strike a league with the wolf and the fox. So is your pastoral life whirled past and away. But the bell rings, and I must get off the track and let the cars go by; —

What's the railroad to me?
I never go to see
Where it ends.

It fills a few hollows,
And makes banks for the swallows,
It sets the sand a-blowing,
And the blackberries a-growing,

but I cross it like a cart-path in the woods. I will not have my eyes put out and my ears spoiled by its smoke and steam and hissing.

Now that the cars are gone by and all the restless world with them, and the fishes in the pond no longer feel their rumbling, I am more alone than ever. For the rest of the long afternoon, perhaps, my meditations are interrupted only by the faint rattle of a carriage or team along the distant highway.

Sometimes, on Sundays, I heard the bells, the Lincoln, Acton, Bedford, or Concord bell, when the wind was favorable, a faint, sweet, and, as it were, natural melody, worth importing into the wilderness. At a sufficient distance over the woods this sound acquires a certain vibratory hum, as if the pine needles in the horizon were the strings of a harp which it swept. All sound heard at the greatest possible distance produces one and the same effect, a vibration of the universal lyre, just as the intervening atmosphere makes a distant ridge of earth interesting to our eyes by the azure tint it imparts to it. There came to me in this case a melody which the air had strained, and which had conversed with every leaf and needle of the wood, that portion of the sound which the elements had taken up and modulated and echoed from vale to vale. The echo is, to some extent, an original sound, and therein is the magic and

charm of it. It is not merely a repetition of what was worth repeating in the bell, but partly the voice of the wood; the same trivial words and notes sung by a wood-nymph.

At evening, the distant lowing of some cow in the horizon beyond the woods sounded sweet and melodious and at first I would mistake it for the voices of certain minstrels by whom I was sometimes serenaded, who might be straying over hill and dale; but soon I was not unpleasantly disappointed when it was prolonged into the cheap and natural music of the cow. I do not mean to be satirical, but to express my appreciation of those youths' singing, when I state that I perceived clearly that it was akin to the music of the cow, and they were at length one articulation of Nature.

Regularly at half-past seven, in one part of the summer, after the evening train had gone by, the whip-poor-wills chanted their vespers for half an hour, sitting on a stump by my door, or upon the ridge-pole of the house. They would begin to sing almost with as much precision as a clock, within five minutes of a particular time, referred to the setting of the sun, every evening. I had a rare opportunity to become acquainted with their habits. Sometimes I heard four or five at once in different parts of the wood, by accident one a bar behind another, and so near me that I distinguished not only the cluck after each note, but often that singular buzzing sound like a fly in a spider's web, only proportionally louder. Sometimes one would circle round and round me in the woods a few feet distant as if tethered by a string, when probably I was near its eggs. They sang at intervals throughout the

night, and were again as musical as ever just before and about dawn.

When other birds are still, the screech owls take up the strain, like mourning women their ancient u-lu-lu. Their dismal scream is truly Ben Jonsonian. Wise midnight hags! It is no honest and blunt tu-whit tu-who of the poets, but, without jesting, a most solemn graveyard ditty, the mutual consolations of suicide lovers remembering the pangs and the delights of supernal love in the infernal groves. Yet I love to hear their wailing, their doleful responses, trilled along the woodside; reminding me sometimes of music and singing birds; as if it were the dark and tearful side of music, the regrets and sighs that would fain be sung. They are the spirits, the low spirits and melancholy forebodings, of fallen souls that once in human shape night-walked the earth and did the deeds of darkness, now expiating their sins with their wailing hymns or threnodies in the scenery of their transgressions. They give me a new sense of the variety and capacity of that nature which is our common dwelling. *Oh-o-o-o-o that I never had been bor-r-r-r-n!* sighs one on this side of the pond, and circles with the restlessness of despair to some new perch on the gray oaks. Then — *that I never had been bor-r-r-r-n!* echoes another on the farther side with tremulous sincerity, and — *bor-r-r-r-n!* comes faintly from far in the Lincoln woods.

I was also serenaded by a hooting owl. Near at hand you could fancy it the most melancholy sound in Nature, as if she meant by this to stereotype and make permanent in her choir the dying moans of a human being, — some poor weak relic of mortality who has left hope be-

hind, and howls like an animal, yet with human sobs, on entering the dark valley, made more awful by a certain gurgling melodiousness, — I find myself beginning with the letters *gl* when I try to imitate it, — expressive of a mind which has reached the gelatinous, mildewy stage in the mortification of all healthy and courageous thought. It reminded me of ghouls and idiots and insane howlings. But now one answers from far woods in a strain made really melodious by distance, — *Hoo hoo hoo, hoorer hoo*; and indeed for the most part it suggested only pleasing associations, whether heard by day or night, summer or winter.

I rejoice that there are owls. Let them do the idiotic and maniacal hooting for men. It is a sound admirably suited to swamps and twilight woods which no day illustrates, suggesting a vast and undeveloped nature which men have not recognized. They represent the stark twilight and unsatisfied thoughts which all have. All day the sun has shone on the surface of some savage swamp, where the single spruce stands hung with usnea lichens, and small hawks circulate above, and the chickadee lisps amid the evergreens, and the partridge and rabbit skulk beneath; but now a more dismal and fitting day dawns, and a different race of creatures awakes to express the meaning of Nature there.

Late in the evening I heard the distant rumbling of wagons over bridges, — a sound heard farther than almost any other at night, — the baying of dogs, and sometimes again the lowing of some disconsolate cow in a distant barn-yard. In the meanwhile all the shore rang with the trump of bullfrogs, the sturdy spirits of

ancient wine-bibbers and wassailers, still unrepentant, trying to sing a catch in their Stygian lake, — if the Walden nymphs will pardon the comparison, for though there are almost no weeds, there are frogs there, — who would fain keep up the hilarious rules of their old festal tables, though their voices have waxed hoarse and solemnly grave, mocking at mirth, and the wine has lost its flavor, and become only liquor to distend their paunches, and sweet intoxication never comes to drown the memory of the past, but mere saturation and waterloggedness and distention. The most aldermanic, with his chin upon a heart-leaf, which serves for a napkin to his drooling chaps, under this northern shore quaffs a deep draught of the once scorned water, and passes round the cup with the ejaculation *tr-r-r-oonk*, *tr-r-r-oonk*, *tr-r-r-oonk* ! and straightway comes over the water from some distant cove the same password repeated, where the next in seniority and girth has gulped down to his mark; and when this observance has made the circuit of the shores, then ejaculates the master of ceremonies, with satisfaction, *tr-r-r-oonk* ! and each in his turn repeats the same down to the least distended, leakiest, and flabbiest paunched, that there be no mistake; and then the bowl goes round again and again, until the sun disperses the morning mist, and only the patriarch is not under the pond, but vainly bellowing *troonk* from time to time, and pausing for a reply.

I am not sure that I ever heard the sound of cock-crowing from my clearing, and I thought that it might be worth the while to keep a cockerel for his music merely, as a singing bird. The note of this once wild Indian

pheasant is certainly the most remarkable of any bird's, and if they could be naturalized without being domesticated, it would soon become the most famous sound in our woods, surpassing the clangor of the goose and the hooting of the owl; and then imagine the cackling of the hens to fill the pauses when their lords' clarions rested! No wonder that man added this bird to his tame stock, — to say nothing of the eggs and drumsticks. To walk in a winter morning in a wood where these birds abounded, their native woods, and hear the wild cockerels crow on the trees, clear and shrill for miles over the resounding earth, drowning the feebler notes of other birds, — think of it! It would put nations on the alert. Who would not be early to rise, and rise earlier and earlier every successive day of his life, till he became unspeakably healthy, wealthy, and wise? This foreign bird's note is celebrated by the poets of all countries along with the notes of their native songsters. All climates agree with brave Chanticleer. He is more indigenous even than the natives. His health is ever good, his lungs are sound, his spirits never flag. Even the sailor on the Atlantic and Pacific is awakened by his voice; but its shrill sound never roused me from my slumbers. I kept neither dog, cat, cow, pig, nor hens, so that you would have said there was a deficiency of domestic sounds; neither the churn, nor the spinning-wheel, nor even the singing of the kettle, nor the hissing of the urn, nor children crying, to comfort one. An old-fashioned man would have lost his senses or died of ennui before this. Not even rats in the wall, for they were starved out, or rather were never baited in, — only

squirrels on the roof and under the floor, a whip-poor-will on the ridge-pole, a blue jay screaming beneath the window, a hare or woodchuck under the house, a screech owl or a cat owl behind it, a flock of wild geese or a laughing loon on the pond, and a fox to bark in the night. Not even a lark or an oriole, those mild plantation birds, ever visited my clearing. No cockerels to crow nor hens to cackle in the yard. No yard! but unfenced nature reaching up to your very sills. A young forest growing up under your windows, and wild sumachs and blackberry vines breaking through into your cellar; sturdy pitch pines rubbing and creaking against the shingles for want of room, their roots reaching quite under the house. Instead of a scuttle or a blind blown off in the gale, — a pine tree snapped off or torn up by the roots behind your house for fuel. Instead of no path to the front-yard gate in the Great Snow, — no gate — no front-yard, — and no path to the civilized world.

SOLITUDE

THIS is a delicious evening, when the whole body is one sense, and imbibes delight through every pore. I go and come with a strange liberty in Nature, a part of herself. As I walk along the stony shore of the pond in my shirt-sleeves, though it is cool as well as cloudy and windy, and I see nothing special to attract me, all the elements are unusually congenial to me. The bullfrogs trump to usher in the night, and the note of the whip-poor-will is borne on the rippling wind from over the water. Sympathy with the fluttering alder and poplar leaves almost takes away my breath; yet, like the lake, my serenity is rippled but not ruffled. These small waves raised by the evening wind are as remote from storm as the smooth reflecting surface. Though it is now dark, the wind still blows and roars in the wood, the waves still dash, and some creatures lull the rest with their notes. The repose is never complete. The wildest animals do not repose, but seek their prey now; the fox, and skunk, and rabbit, now roam the fields and woods without fear. They are Nature's watchmen, — links which connect the days of animated life.

When I return to my house I find that visitors have been there and left their cards, either a bunch of flowers, or a wreath of evergreen, or a name in pencil on a yel-

•

low walnut leaf or a chip. They who come rarely to the woods take some little piece of the forest into their hands to play with by the way, which they leave, either intentionally or accidentally. One has peeled a willow wand, woven it into a ring, and dropped it on my table. I could always tell if visitors had called in my absence, either by the bended twigs or grass, or the print of their shoes, and generally of what sex or age or quality they were by some slight trace left, as a flower dropped, or a bunch of grass plucked and thrown away, even as far off as the railroad, half a mile distant, or by the lingering odor of a cigar or pipe. Nay, I was frequently notified of the passage of a traveller along the highway sixty rods off by the scent of his pipe.

There is commonly sufficient space about us. Our horizon is never quite at our elbows. The thick wood is not just at our door, nor the pond, but somewhat is always clearing, familiar and worn by us, appropriated and fenced in some way, and reclaimed from Nature. For what reason have I this vast range and circuit, some square miles of unfrequented forest, for my privacy, abandoned to me by men? My nearest neighbor is a mile distant, and no house is visible from any place but the hill-tops within half a mile of my own. I have my horizon bounded by woods all to myself; a distant view of the railroad where it touches the pond on the one hand, and of the fence which skirts the woodland road on the other. But for the most part it is as solitary where I live as on the prairies. It is as much Asia or Africa as New England. I have, as it were, my own sun and moon and stars, and a little world all to myself. At night there

was never a traveller passed my house, or knocked at my door, more than if I were the first or last man; unless it were in the spring, when at long intervals some came from the village to fish for pouts, — they plainly fished much more in the Walden Pond of their own natures, and baited their hooks with darkness, — but they soon retreated, usually with light baskets, and left “the world to darkness and to me,” and the black kernel of the night was never profaned by any human neighborhood. I believe that men are generally still a little afraid of the dark, though the witches are all hung, and Christianity and candles have been introduced.

Yet I experienced sometimes that the most sweet and tender, the most innocent and encouraging society may be found in any natural object, even for the poor misanthrope and most melancholy man. There can be no very black melancholy to him who lives in the midst of nature and has his senses still. There was never yet such a storm but it was Æolian music to a healthy and innocent ear. Nothing can rightly compel a simple and brave man to a vulgar sadness. While I enjoy the friendship of the seasons I trust that nothing can make life a burden to me. The gentle rain which waters my beans and keeps me in the house to-day is not drear and melancholy, but good for me too. Though it prevents my hoeing them, it is of far more worth than my hoeing. If it should continue so long as to cause the seeds to rot in the ground and destroy the potatoes in the low lands, it would still be good for the grass on the uplands, and, being good for the grass, it would be good for me. Sometimes, when I compare myself with other men, it seems

as if I were more favored by the gods than they, beyond any deserts that I am conscious of; as if I had a warrant and surety at their hands which my fellows have not, and were especially guided and guarded. I do not flatter myself, but if it be possible they flatter me. I have never felt lonesome, or in the least oppressed by a sense of solitude, but once, and that was a few weeks after I came to the woods, when, for an hour, I doubted if the near neighborhood of man was not essential to a serene and healthy life. To be alone was something unpleasant. But I was at the same time conscious of a slight insanity in my mood, and seemed to foresee my recovery. In the midst of a gentle rain while these thoughts prevailed, I was suddenly sensible of such sweet and beneficent society in Nature, in the very pattering of the drops, and in every sound and sight around my house, an infinite and unaccountable friendliness all at once like an atmosphere sustaining me, as made the fancied advantages of human neighborhood insignificant, and I have never thought of them since. Every little pine needle expanded and swelled with sympathy and befriended me. I was so distinctly made aware of the presence of something kindred to me, even in scenes which we are accustomed to call wild and dreary, and also that the nearest of blood to me and humanest was not a person nor a villager, that I thought no place could ever be strange to me again. —

“Mourning untimely consumes the sad;
Few are their days in the land of the living,
Beautiful daughter of Toscar.”

Some of my pleasantest hours were during the long

rain-storms in the spring or fall, which confined me to the house for the afternoon as well as the forenoon, soothed by their ceaseless roar and pelting; when an early twilight ushered in a long evening in which many thoughts had time to take root and unfold themselves. In those driving northeast rains which tried the village houses so, when the maids stood ready with mop and pail in front entries to keep the deluge out, I sat behind my door in my little house, which was all entry, and thoroughly enjoyed its protection. In one heavy thunder-shower the lightning struck a large pitch pine across the pond, making a very conspicuous and perfectly regular spiral groove from top to bottom, an inch or more deep, and four or five inches wide, as you would groove a walking-stick. I passed it again the other day, and was struck with awe on looking up and beholding that mark, now more distinct than ever, where a terrific and resistless bolt came down out of the harmless sky eight years ago. Men frequently say to me, "I should think you would feel lonesome down there, and want to be nearer to folks, rainy and snowy days and nights especially." I am tempted to reply to such, — This whole earth which we inhabit is but a point in space. How far apart, think you, dwell the two most distant inhabitants of yonder star, the breadth of whose disk cannot be appreciated by our instruments? Why should I feel lonely? is not our planet in the Milky Way? This which you put seems to me not to be the most important question. What sort of space is that which separates a man from his fellows and makes him solitary? I have found that no exertion of the legs can bring two minds much nearer

to one another. What do we want most to dwell near to? Not to many men surely, the depot, the post-office, the bar-room, the meeting-house, the school-house, the grocery, Beacon Hill, or the Five Points, where men most congregate, but to the perennial source of our life, whence in all our experience we have found that to issue, as the willow stands near the water and sends out its roots in that direction. This will vary with different natures, but this is the place where a wise man will dig his cellar. . . . I one evening overtook one of my townsmen, who has accumulated what is called "a handsome property," — though I never got a *fair* view of it, — on the Walden road, driving a pair of cattle to market, who inquired of me how I could bring my mind to give up so many of the comforts of life. I answered that I was very sure I liked it passably well; I was not joking. And so I went home to my bed, and left him to pick his way through the darkness and the mud to Brighton, — or Bright-town, — which place he would reach some time in the morning.

Any prospect of awakening or coming to life to a dead man makes indifferent all times and places. The place where that may occur is always the same, and indescribably pleasant to all our senses. For the most part we allow only outlying and transient circumstances to make our occasions. They are, in fact, the cause of our distraction. Nearest to all things is that power which fashions their being. *Next* to us the grandest laws are continually being executed. *Next* to us is not the workman whom we have hired, with whom we love so well to talk, but the workman whose work we are.

“How vast and profound is the influence of the subtile powers of Heaven and of Earth!”

“We seek to perceive them, and we do not see them; we seek to hear them, and we do not hear them; identified with the substance of things, they cannot be separated from them.”

“They cause that in all the universe men purify and sanctify their hearts, and clothe themselves in their holiday garments to offer sacrifices and oblations to their ancestors. It is an ocean of subtile intelligences. They are everywhere, above us, on our left, on our right; they environ us on all sides.”

We are the subjects of an experiment which is not a little interesting to me. Can we not do without the society of our gossips a little while under these circumstances, — have our own thoughts to cheer us? Confucius says truly, “Virtue does not remain as an abandoned orphan; it must of necessity have neighbors.”

With thinking we may be beside ourselves in a sane sense. By a conscious effort of the mind we can stand aloof from actions and their consequences; and all things, good and bad, go by us like a torrent. We are not wholly involved in Nature. I may be either the driftwood in the stream, or Indra in the sky looking down on it. I *may* be affected by a theatrical exhibition; on the other hand, I *may not* be affected by an actual event which appears to concern me much more. I only know myself as a human entity; the scene, so to speak, of thoughts and affections; and am sensible of a certain doubleness by which I can stand as remote from myself as from another. However intense my experience, I am

conscious of the presence and criticism of a part of me, which, as it were, is not a part of me, but spectator, sharing no experience, but taking note of it, and that is no more I than it is you. When the play, it may be the tragedy, of life is over, the spectator goes his way. It was a kind of fiction, a work of the imagination only, so far as he was concerned. This doubleness may easily make us poor neighbors and friends sometimes.

I find it wholesome to be alone the greater part of the time. To be in company, even with the best, is soon wearisome and dissipating. I love to be alone. I never found the companion that was so companionable as solitude. We are for the most part more lonely when we go abroad among men than when we stay in our chambers. A man thinking or working is always alone, let him be where he will. Solitude is not measured by the miles of space that intervene between a man and his fellows. The really diligent student in one of the crowded hives of Cambridge College is as solitary as a dervish in the desert. The farmer can work alone in the field or the woods all day, hoeing or chopping, and not feel lonesome, because he is employed; but when he comes home at night he cannot sit down in a room alone, at the mercy of his thoughts, but must be where he can "see the folks," and recreate, and, as he thinks, remunerate himself for his day's solitude; and hence he wonders how the student can sit alone in the house all night and most of the day without ennui and "the blues;" but he does not realize that the student, though in the house, is still at work in *his* field, and chopping in *his* woods, as the farmer in his, and in turn seeks the same

recreation and society that the latter does, though it may be a more condensed form of it.

Society is commonly too cheap. We meet at very short intervals, not having had time to acquire any new value for each other. We meet at meals three times a day, and give each other a new taste of that old musty cheese that we are. We have had to agree on a certain set of rules, called etiquette and politeness, to make this frequent meeting tolerable and that we need not come to open war. We meet at the post-office, and at the sociable, and about the fireside every night; we live thick and are in each other's way, and stumble over one another, and I think that we thus lose some respect for one another. Certainly less frequency would suffice for all important and hearty communications. Consider the girls in a factory, — never alone, hardly in their dreams. It would be better if there were but one inhabitant to a square mile, as where I live. The value of a man is not in his skin, that we should touch him.

I have heard of a man lost in the woods and dying of famine and exhaustion at the foot of a tree, whose loneliness was relieved by the grotesque visions with which, owing to bodily weakness, his diseased imagination surrounded him, and which he believed to be real. So also, owing to bodily and mental health and strength, we may be continually cheered by a like but more normal and natural society, and come to know that we are never alone.

I have a great deal of company in my house; especially in the morning, when nobody calls. Let me suggest a few comparisons, that some one may convey an idea

of my situation. I am no more lonely than the loon in the pond that laughs so loud, or than Walden Pond itself. What company has that lonely lake, I pray? And yet it has not the blue devils, but the blue angels in it, in the azure tint of its waters. The sun is alone, except in thick weather, when there sometimes appear to be two, but one is a mock sun. God is alone, — but the devil, he is far from being alone; he sees a great deal of company; he is legion. I am no more lonely than a single mullein or dandelion in a pasture, or a bean leaf, or sorrel, or a horse-fly, or a humblebee. I am no more lonely than the Mill Brook, or a weathercock, or the north star, or the south wind, or an April shower, or a January thaw, or the first spider in a new house.

I have occasional visits in the long winter evenings, when the snow falls fast and the wind howls in the wood, from an old settler and original proprietor, who is reported to have dug Walden Pond, and stoned it, and fringed it with pine woods; who tells me stories of old time and of new eternity; and between us we manage to pass a cheerful evening with social mirth and pleasant views of things, even without apples or cider, — a most wise and humorous friend, whom I love much, who keeps himself more secret than ever did Goffe or Whalley; and though he is thought to be dead, none can show where he is buried. An elderly dame, too, dwells in my neighborhood, invisible to most persons, in whose odorous herb garden I love to stroll sometimes, gathering simples and listening to her fables; for she has a genius of unequalled fertility, and her memory runs back farther than mythology, and she can

tell me the original of every fable, and on what fact every one is founded, for the incidents occurred when she was young. A ruddy and lusty old dame, who delights in all weathers and seasons, and is likely to outlive all her children yet.

The indescribable innocence and beneficence of Nature, — of sun and wind and rain, of summer and winter, — such health, such cheer, they afford forever! and such sympathy have they ever with our race, that all Nature would be affected, and the sun's brightness fade, and the winds would sigh humanely, and the clouds rain tears, and the woods shed their leaves and put on mourning in midsummer, if any man should ever for a just cause grieve. Shall I not have intelligence with the earth? Am I not partly leaves and vegetable mould myself?

What is the pill which will keep us well, serene, contented? Not my or thy great-grandfather's, but our great-grandmother Nature's universal, vegetable, botanic medicines, by which she has kept herself young always, outlived so many old Parrs in her day, and fed her health with their decaying fatness. For my panacea, instead of one of those quack vials of a mixture dipped from Acheron and the Dead Sea, which come out of those long shallow black-schooner looking wagons which we sometimes see made to carry bottles, let me have a draught of undiluted morning air. Morning air! If men will not drink of this at the fountain-head of the day, why, then, we must even bottle up some and sell it in the shops, for the benefit of those who have lost their subscription ticket to morning time in this world. But re-

member, it will not keep quite till noonday even in the coolest cellar, but drive out the stopples long ere that and follow westward the steps of Aurora. I am no worshipper of Hygeia, who was the daughter of that old herb-doctor Æsculapius, and who is represented on monuments holding a serpent in one hand, and in the other a cup out of which the serpent sometimes drinks; but rather of Hebe, cup-bearer to Jupiter, who was the daughter of Juno and wild lettuce, and who had the power of restoring gods and men to the vigor of youth. She was probably the only thoroughly sound-conditioned, healthy, and robust young lady that ever walked the globe, and wherever she came it was spring.

VI

VISITORS

I THINK that I love society as much as most, and am ready enough to fasten myself like a bloodsucker for the time to any full-blooded man that comes in my way. I am naturally no hermit, but might possibly sit out the sturdiest frequenter of the bar-room, if my business called me thither.

I had three chairs in my house; one for solitude, two for friendship, three for society. When visitors came in larger and unexpected numbers there was but the third chair for them all, but they generally economized the room by standing up. It is surprising how many great men and women a small house will contain. I have had twenty-five or thirty souls, with their bodies, at once under my roof, and yet we often parted without being aware that we had come very near to one another. Many of our houses, both public and private, with their almost innumerable apartments, their huge halls and their cellars for the storage of wines and other munitions of peace, appear to me extravagantly large for their inhabitants. They are so vast and magnificent that the latter seem to be only vermin which infest them. I am surprised when the herald blows his summons before some Tremont or Astor or Middlesex House, to see come creeping out over the piazza for all inhabitants a

ridiculous mouse, which soon again slinks into some hole in the pavement.

One inconvenience I sometimes experienced in so small a house, the difficulty of getting to a sufficient distance from my guest when we began to utter the big thoughts in big words. You want room for your thoughts to get into sailing trim and run a course or two before they make their port. The bullet of your thought must have overcome its lateral and ricochet motion and fallen into its last and steady course before it reaches the ear of the hearer, else it may plow out again through the side of his head. Also, our sentences wanted room to unfold and form their columns in the interval. Individuals, like nations, must have suitable broad and natural boundaries, even a considerable neutral ground, between them. I have found it a singular luxury to talk across the pond to a companion on the opposite side. In my house we were so near that we could not begin to hear, — we could not speak low enough to be heard; as when you throw two stones into calm water so near that they break each other's undulations. If we are merely loquacious and loud talkers, then we can afford to stand very near together, cheek by jowl, and feel each other's breath; but if we speak reservedly and thoughtfully, we want to be farther apart, that all animal heat and moisture may have a chance to evaporate. If we would enjoy the most intimate society with that in each of us which is without, or above, being spoken to, we must not only be silent, but commonly so far apart bodily that we cannot possibly hear each other's voice in any case. Referred to this standard, speech is for the convenience of those who are

hard of hearing; but there are many fine things which we cannot say if we have to shout. As the conversation began to assume a loftier and grander tone, we gradually shoved our chairs farther apart till they touched the wall in opposite corners, and then commonly there was not room enough.

My "best" room, however, my withdrawing room, always ready for company, on whose carpet the sun rarely fell, was the pine wood behind my house. Thither in summer days, when distinguished guests came, I took them, and a priceless domestic swept the floor and dusted the furniture and kept the things in order.

If one guest came he sometimes partook of my frugal meal, and it was no interruption to conversation to be stirring a hasty-pudding, or watching the rising and maturing of a loaf of bread in the ashes, in the meanwhile. But if twenty came and sat in my house there was nothing said about dinner, though there might be bread enough for two, more than if eating were a forsaken habit; but we naturally practised abstinence; and this was never felt to be an offence against hospitality, but the most proper and considerate course. The waste and decay of physical life, which so often needs repair, seemed miraculously retarded in such a case, and the vital vigor stood its ground. I could entertain thus a thousand as well as twenty; and if any ever went away disappointed or hungry from my house when they found me at home, they may depend upon it that I sympathized with them at least. So easy is it, though many housekeepers doubt it, to establish new and better customs in the place of the old. You need not rest your reputa-

tion on the dinners you give. For my own part, I was never so effectually deterred from frequenting a man's house, by any kind of Cerberus whatever, as by the parade one made about dining me, which I took to be a very polite and roundabout hint never to trouble him so again. I think I shall never revisit those scenes. I should be proud to have for the motto of my cabin those lines of Spenser which one of my visitors inscribed on a yellow walnut leaf for a card: —

“Arrived there, the little house they fill,
Ne looke for entertainment where none was;
Rest is their feast, and all things at their will:
The noblest mind the best contentment has.”

When Winslow, afterward governor of the Plymouth Colony, went with a companion on a visit of ceremony to Massasoit on foot through the woods, and arrived tired and hungry at his lodge, they were well received by the king, but nothing was said about eating that day. When the night arrived, to quote their own words,— “He laid us on the bed with himself and his wife, they at the one end and we at the other, it being only planks laid a foot from the ground and a thin mat upon them. Two more of his chief men, for want of room, pressed by and upon us; so that we were worse weary of our lodging than of our journey.” At one o'clock the next day Massasoit “brought two fishes that he had shot,” about thrice as big as a bream. “These being boiled, there were at least forty looked for a share in them; the most eat of them. This meal only we had in two nights and a day; and had not one of us bought a partridge, we had taken our journey fasting.” Fearing that they

would be light-headed for want of food and also sleep, owing to "the savages' barbarous singing, (for they use to sing themselves asleep,)" and that they might get home while they had strength to travel, they departed. As for lodging, it is true they were but poorly entertained, though what they found an inconvenience was no doubt intended for an honor; but as far as eating was concerned, I do not see how the Indians could have done better. They had nothing to eat themselves, and they were wiser than to think that apologies could supply the place of food to their guests; so they drew their belts tighter and said nothing about it. Another time when Winslow visited them, it being a season of plenty with them, there was no deficiency in this respect.

As for men, they will hardly fail one anywhere. I had more visitors while I lived in the woods than at any other period of my life; I mean that I had some. I met several there under more favorable circumstances than I could anywhere else. But fewer came to see me on trivial business. In this respect, my company was winnowed by my mere distance from town. I had withdrawn so far within the great ocean of solitude, into which the rivers of society empty, that for the most part, so far as my needs were concerned, only the finest sediment was deposited around me. Beside, there were wafted to me evidences of unexplored and uncultivated continents on the other side.

Who should come to my lodge this morning but a true Homeric or Paphlagonian man, — he had so suitable and poetic a name that I am sorry I cannot print it here, — a Canadian, a woodchopper and post-maker, who

can hole fifty posts in a day, who made his last supper on a woodchuck which his dog caught. He, too, has heard of Homer, and, "if it were not for books," would "not know what to do rainy days," though perhaps he has not read one wholly through for many rainy seasons. Some priest who could pronounce the Greek itself taught him to read his verse in the Testament in his native parish far away; and now I must translate to him, while he holds the book, Achilles' reproof to Patroclus for his sad countenance. — "Why are you in tears, Patroclus, like a young girl?" —

"Or have you alone heard some news from Phthia?
They say that Menœtius lives yet, son of Actor,
And Peleus lives, son of Æacus, among the Myrmidons,
Either of whom having died, we should greatly grieve."

He says, "That's good." He has a great bundle of white oak bark under his arm for a sick man, gathered this Sunday morning. "I suppose there's no harm in going after such a thing to-day," says he. To him Homer was a great writer, though what his writing was about he did not know. A more simple and natural man it would be hard to find. Vice and disease, which cast such a sombre moral hue over the world, seemed to have hardly any existence for him. He was about twenty-eight years old, and had left Canada and his father's house a dozen years before to work in the States, and earn money to buy a farm with at last, perhaps in his native country. He was cast in the coarsest mould; a stout but sluggish body, yet gracefully carried, with a thick sunburnt neck, dark bushy hair, and dull sleepy blue eyes, which were occasionally lit up with expression. He wore a flat gray

cloth cap, a dingy wool-colored greatcoat, and cow-hide boots. He was a great consumer of meat, usually carrying his dinner to his work a couple of miles past my house, — for he chopped all summer, — in a tin pail; cold meats, often cold woodchucks, and coffee in a stone bottle which dangled by a string from his belt; and sometimes he offered me a drink. He came along early, crossing my bean-field, though without anxiety or haste to get to his work, such as Yankees exhibit. He was n't a-going to hurt himself. He did n't care if he only earned his board. Frequently he would leave his dinner in the bushes, when his dog had caught a woodchuck by the way, and go back a mile and a half to dress it and leave it in the cellar of the house where he boarded, after deliberating first for half an hour whether he could not sink it in the pond safely till nightfall, — loving to dwell long upon these themes. He would say, as he went by in the morning, "How thick the pigeons are! If working every day were not my trade, I could get all the meat I should want by hunting, — pigeons, woodchucks, rabbits, partridges, — by gosh! I could get all I should want for a week in one day."

He was a skilful chopper, and indulged in some flourishes and ornaments in his art. He cut his trees level and close to the ground, that the sprouts which came up afterward might be more vigorous and a sled might slide over the stumps; and instead of leaving a whole tree to support his corded wood, he would pare it away to a slender stake or splinter which you could break off with your hand at last.

He interested me because he was so quiet and solitary

and so happy withal; a well of good humor and contentment which overflowed at his eyes. His mirth was without alloy. Sometimes I saw him at his work in the woods, felling trees, and he would greet me with a laugh of inexpressible satisfaction, and a salutation in Canadian French, though he spoke English as well. When I approached him he would suspend his work, and with half-suppressed mirth lie along the trunk of a pine which he had felled, and, peeling off the inner bark, roll it up into a ball and chew it while he laughed and talked. Such an exuberance of animal spirits had he that he sometimes tumbled down and rolled on the ground with laughter at anything which made him think and tickled him. Looking round upon the trees he would exclaim, — “By George! I can enjoy myself well enough here chopping; I want no better sport.” Sometimes, when at leisure, he amused himself all day in the woods with a pocket pistol, firing salutes to himself at regular intervals as he walked. In the winter he had a fire by which at noon he warmed his coffee in a kettle; and as he sat on a log to eat his dinner the chickadees would sometimes come round and alight on his arm and peck at the potato in his fingers; and he said that he “liked to have the little *jellers* about him.”

In him the animal man chiefly was developed. In physical endurance and contentment he was cousin to the pine and the rock. I asked him once if he was not sometimes tired at night, after working all day; and he answered, with a sincere and serious look, “Gorrappit, I never was tired in my life.” But the intellectual and what is called spiritual man in him were slumbering as in an

infant. He had been instructed only in that innocent and ineffectual way in which the Catholic priests teach the aborigines, by which the pupil is never educated to the degree of consciousness, but only to the degree of trust and reverence, and a child is not made a man, but kept a child. When Nature made him, she gave him a strong body and contentment for his portion, and propped him on every side with reverence and reliance, that he might live out his threescore years and ten a child. He was so genuine and unsophisticated that no introduction would serve to introduce him, more than if you introduced a woodchuck to your neighbor. He had got to find him out as you did. He would not play any part. Men paid him wages for work, and so helped to feed and clothe him; but he never exchanged opinions with them. He was so simply and naturally humble — if he can be called humble who never aspires — that humility was no distinct quality in him, nor could he conceive of it. Wiser men were demigods to him. If you told him that such a one was coming, he did as if he thought that anything so grand would expect nothing of himself, but take all the responsibility on itself, and let him be forgotten still. He never heard the sound of praise. He particularly revered the writer and the preacher. Their performances were miracles. When I told him that I wrote considerably, he thought for a long time that it was merely the handwriting which I meant, for he could write a remarkably good hand himself. I sometimes found the name of his native parish handsomely written in the snow by the highway, with the proper French accent, and knew that he had passed. I asked him if he

ever wished to write his thoughts. He said that he had read and written letters for those who could not, but he never tried to write thoughts, — no, he could not, he could not tell what to put first, it would kill him, and then there was spelling to be attended to at the same time!

I heard that a distinguished wise man and reformer asked him if he did not want the world to be changed; but he answered with a chuckle of surprise in his Canadian accent, not knowing that the question had ever been entertained before, "No, I like it well enough." It would have suggested many things to a philosopher to have dealings with him. To a stranger he appeared to know nothing of things in general; yet I sometimes saw in him a man whom I had not seen before, and I did not know whether he was as wise as Shakespeare or as simply ignorant as a child, whether to suspect him of a fine poetic consciousness or of stupidity. A townsman told me that when he met him sauntering through the village in his small close-fitting cap, and whistling to himself, he reminded him of a prince in disguise.

His only books were an almanac and an arithmetic, in which last he was considerably expert. The former was a sort of cyclopædia to him, which he supposed to contain an abstract of human knowledge, as indeed it does to a considerable extent. I loved to sound him on the various reforms of the day, and he never failed to look at them in the most simple and practical light. He had never heard of such things before. Could he do without factories? I asked. He had worn the home-made Vermont gray, he said, and that was good. Could

he dispense with tea and coffee? Did this country afford any beverage beside water? He had soaked hemlock leaves in water and drank it, and thought that was better than water in warm weather. When I asked him if he could do without money, he showed the convenience of money in such a way as to suggest and coincide with the most philosophical accounts of the origin of this institution, and the very derivation of the word *pecunia*. If an ox were his property, and he wished to get needles and thread at the store, he thought it would be inconvenient and impossible soon to go on mortgaging some portion of the creature each time to that amount. He could defend many institutions better than any philosopher, because, in describing them as they concerned him, he gave the true reason for their prevalence, and speculation had not suggested to him any other. At another time, hearing Plato's definition of a man, — a biped without feathers, — and that one exhibited a cock plucked and called it Plato's man, he thought it an important difference that the *knees* bent the wrong way. He would sometimes exclaim, "How I love to talk! By George, I could talk all day!" I asked him once, when I had not seen him for many months, if he had got a new idea this summer. "Good Lord," said he, "a man that has to work as I do, if he does not forget the ideas he has had, he will do well. May be the man you hoe with is inclined to race; then, by gorry, your mind must be there; you think of weeds." He would sometimes ask me first on such occasions, if I had made any improvement. One winter day I asked him if he was always satisfied with himself, wishing to suggest a substitute within him

for the priest without, and some higher motive for living. "Satisfied!" said he; "some men are satisfied with one thing, and some with another. One man, perhaps, if he has got enough, will be satisfied to sit all day with his back to the fire and his belly to the table, by George!" Yet I never, by any manœuvring, could get him to take the spiritual view of things; the highest that he appeared to conceive of was a simple expediency, such as you might expect an animal to appreciate; and this, practically, is true of most men. If I suggested any improvement in his mode of life, he merely answered, without expressing any regret, that it was too late. Yet he thoroughly believed in honesty and the like virtues.

There was a certain positive originality, however slight, to be detected in him, and I occasionally observed that he was thinking for himself and expressing his own opinion, a phenomenon so rare that I would any day walk ten miles to observe it, and it amounted to the re-origination of many of the institutions of society. Though he hesitated, and perhaps failed to express himself distinctly, he always had a presentable thought behind. Yet his thinking was so primitive and immersed in his animal life, that, though more promising than a merely learned man's, it rarely ripened to anything which can be reported. He suggested that there might be men of genius in the lowest grades of life, however permanently humble and illiterate, who take their own view always, or do not pretend to see at all; who are as bottomless even as Walden Pond was thought to be, though they may be dark and muddy.

Many a traveller came out of his way to see me and the inside of my house, and, as an excuse for calling, asked for a glass of water. I told them that I drank at the pond, and pointed thither, offering to lend them a dipper. Far off as I lived, I was not exempted from that annual visitation which occurs, methinks, about the first of April, when everybody is on the move; and I had my share of good luck, though there were some curious specimens among my visitors. Half-witted men from the almshouse and elsewhere came to see me; but I endeavored to make them exercise all the wit they had, and make their confessions to me; in such cases making wit the theme of our conversation; and so was compensated. Indeed, I found some of them to be wiser than the so-called *overseers* of the poor and selectmen of the town, and thought it was time that the tables were turned. With respect to wit, I learned that there was not much difference between the half and the whole. One day, in particular, an inoffensive, simple-minded pauper, whom with others I had often seen used as fencing stuff, standing or sitting on a bushel in the fields to keep cattle and himself from straying, visited me, and expressed a wish to live as I did. He told me, with the utmost simplicity and truth, quite superior, or rather *inferior*, to anything that is called humility, that he was "deficient in intellect." These were his words. The Lord had made him so, yet he supposed the Lord cared as much for him as for another. "I have always been so," said he, "from my childhood; I never had much mind; I was not like other children; I am weak in the head. It was the Lord's

will, I suppose." And there he was to prove the truth of his words. He was a metaphysical puzzle to me. I have rarely met a fellow-man on such promising ground, — it was so simple and sincere and so true all that he said. And, true enough, in proportion as he appeared to humble himself was he exalted. I did not know at first but it was the result of a wise policy. It seemed that from such a basis of truth and frankness as the poor weak-headed pauper had laid, our intercourse might go forward to something better than the intercourse of sages.

I had some guests from those not reckoned commonly among the town's poor, but who should be; who are among the world's poor, at any rate; guests who appeal, not to your hospitality, but to your *hospitalality*; who earnestly wish to be helped, and preface their appeal with the information that they are resolved, for one thing, never to help themselves. I require of a visitor that he be not actually starving, though he may have the very best appetite in the world, however he got it. Objects of charity are not guests. Men who did not know when their visit had terminated, though I went about my business again, answering them from greater and greater remoteness. Men of almost every degree of wit called on me in the migrating season. Some who had more wits than they knew what to do with; runaway slaves with plantation manners, who listened from time to time, like the fox in the fable, as if they heard the hounds a-baying on their track, and looked at me beseechingly, as much as to say, —

"O Christian, will you send me back?"

One real runaway slave, among the rest, whom I helped to forward toward the north star. Men of one idea, like a hen with one chicken, and that a duckling; men of a thousand ideas, and unkempt heads, like those hens which are made to take charge of a hundred chickens, all in pursuit of one bug, a score of them lost in every morning's dew, — and become frizzled and mangy in consequence; men of ideas instead of legs, a sort of intellectual centipede that made you crawl all over. One man proposed a book in which visitors should write their names, as at the White Mountains; but, alas! I have too good a memory to make that necessary.

I could not but notice some of the peculiarities of my visitors. Girls and boys and young women generally seemed glad to be in the woods. They looked in the pond and at the flowers, and improved their time. Men of business, even farmers, thought only of solitude and employment, and of the great distance at which I dwelt from something or other; and though they said that they loved a ramble in the woods occasionally, it was obvious that they did not. Restless committed men, whose time was all taken up in getting a living or keeping it; ministers who spoke of God as if they enjoyed a monopoly of the subject, who could not bear all kinds of opinions; doctors, lawyers, uneasy housekeepers who pried into my cupboard and bed when I was out, — how came Mrs. — to know that my sheets were not as clean as hers? — young men who had ceased to be young, and had concluded that it was safest to follow the beaten track of the professions, — all these generally said that it was not possible to do so much good in my

position. Ay! there was the rub. The old and infirm and the timid, of whatever age or sex, thought most of sickness, and sudden accident and death; to them life seemed full of danger, — what danger is there if you don't think of any? — and they thought that a prudent man would carefully select the safest position, where Dr. B. might be on hand at a moment's warning. To them the village was literally a *com-munity*, a league for mutual defence, and you would suppose that they would not go a-huckleberrying without a medicine chest. The amount of it is, if a man is alive, there is always *danger* that he may die, though the danger must be allowed to be less in proportion as he is dead-and-alive to begin with. A man sits as many risks as he runs. Finally, there were the self-styled reformers, the greatest bores of all, who thought that I was forever singing, —

This is the house that I built;

This is the man that lives in the house that I built;

but they did not know that the third line was, —

These are the folks that worry the man

That lives in the house that I built.

I did not fear the hen-harriers, for I kept no chickens; but I feared the men-harriers rather.

I had more cheering visitors than the last. Children come a-berrying, railroad men taking a Sunday morning walk in clean shirts, fishermen and hunters, poets and philosophers; in short, all honest pilgrims, who came out to the woods for freedom's sake, and really left the village behind, I was ready to greet with, — "Welcome, Englishmen! welcome, Englishmen!" for I had had communication with that race.

VII

THE BEAN-FIELD

MEANWHILE my beans, the length of whose rows, added together, was seven miles already planted, were impatient to be hoed, for the earliest had grown considerably before the latest were in the ground; indeed they were not easily to be put off. What was the meaning of this so steady and self-respecting, this small Herculean labor, I knew not. I came to love my rows, my beans, though so many more than I wanted. They attached me to the earth, and so I got strength like Antæus. But why should I raise them? Only Heaven knows. This was my curious labor all summer, — to make this portion of the earth's surface, which had yielded only cinquefoil, blackberries, johnswort, and the like, before, sweet wild fruits and pleasant flowers, produce instead this pulse. What shall I learn of beans or beans of me? I cherish them, I hoe them, early and late I have an eye to them; and this is my day's work. It is a fine broad leaf to look on. My auxiliaries are the dews and rains which water this dry soil, and what fertility is in the soil itself, which for the most part is lean and effete. My enemies are worms, cool days, and most of all woodchucks. The last have nibbled for me a quarter of an acre clean. But what right had I to oust johnswort and the rest, and break up their ancient

herb garden? Soon, however, the remaining beans will be too tough for them, and go forward to meet new foes.

When I was four years old, as I well remember, I was brought from Boston to this my native town, through these very woods and this field, to the pond. It is one of the oldest scenes stamped on my memory. And now to-night my flute has waked the echoes over that very water. The pines still stand here older than I; or, if some have fallen, I have cooked my supper with their stumps, and a new growth is rising all around, preparing another aspect for new infant eyes. Almost the same johnswort springs from the same perennial root in this pasture, and even I have at length helped to clothe that fabulous landscape of my infant dreams, and one of the results of my presence and influence is seen in these bean leaves, corn blades, and potato vines.

I planted about two acres and a half of upland; and as it was only about fifteen years since the land was cleared, and I myself had got out two or three cords of stumps, I did not give it any manure; but in the course of the summer it appeared by the arrowheads which I turned up in hoeing, that an extinct nation had anciently dwelt here and planted corn and beans ere white men came to clear the land, and so, to some extent, had exhausted the soil for this very crop.

Before yet any woodchuck or squirrel had run across the road, or the sun had got above the shrub oaks, while all the dew was on, though the farmers warned me against it, — I would advise you to do all your work if possible while the dew is on, — I began to level the ranks of haughty weeds in my bean-field and throw

dust upon their heads. Early in the morning I worked barefooted, dabbling like a plastic artist in the dewy and crumbling sand, but later in the day the sun blistered my feet. There the sun lighted me to hoe beans, pacing slowly backward and forward over that yellow gravelly upland, between the long green rows, fifteen rods, the one end terminating in a shrub oak copse where I could rest in the shade, the other in a blackberry field where the green berries deepened their tints by the time I had made another bout. Removing the weeds, putting fresh soil about the bean stems, and encouraging this weed which I had sown, making the yellow soil express its summer thought in bean leaves and blossoms rather than in wormwood and piper and millet grass, making the earth say beans instead of grass, — this was my daily work. As I had little aid from horses or cattle, or hired men or boys, or improved implements of husbandry, I was much slower, and became much more intimate with my beans than usual. But labor of the hands, even when pursued to the verge of drudgery, is perhaps never the worst form of idleness. It has a constant and imperishable moral, and to the scholar it yields a classic result. A very *agricola laboriosus* was I to travellers bound westward through Lincoln and Wayland to nobody knows where; they sitting at their ease in gigs, with elbows on knees, and reins loosely hanging in festoons; I the home-staying, laborious native of the soil. But soon my homestead was out of their sight and thought. It was the only open and cultivated field for a great distance on either side of the road, so they made the most of it; and sometimes the

man in the field heard more of travellers' gossip and comment than was meant for his ear: "Beans so late! peas so late!" — for I continued to plant when others had begun to hoe, — the ministerial husbandman had not suspected it. "Corn, my boy, for fodder; corn for fodder." "Does he *live* there?" asks the black bonnet of the gray coat; and the hard-featured farmer reins up his grateful dobbin to inquire what you are doing where he sees no manure in the furrow, and recommends a little chip dirt, or any little waste stuff, or it may be ashes or plaster. But here were two acres and a half of furrows, and only a hoe for cart and two hands to draw it, — there being an aversion to other carts and horses, — and chip dirt far away. Fellow-travellers as they rattled by compared it aloud with the fields which they had passed, so that I came to know how I stood in the agricultural world. This was one field not in Mr. Colman's report. And, by the way, who estimates the value of the crop which nature yields in the still wilder fields unimproved by man? The crop of *English* hay is carefully weighed, the moisture calculated, the silicates and the potash; but in all dells and pond-holes in the woods and pastures and swamps grows a rich and various crop only unreaped by man. Mine was, as it were, the connecting link between wild and cultivated fields; as some states are civilized, and others half-civilized, and others savage or barbarous, so my field was, though not in a bad sense, a half-cultivated field. They were beans cheerfully returning to their wild and primitive state that I cultivated, and my hoe played the *Ranz des Vaches* for them.

Near at hand, upon the topmost spray of a birch, sings the brown thrasher — or red mavis, as some love to call him — all the morning, glad of your society, that would find out another farmer's field if yours were not here. While you are planting the seed, he cries, — “Drop it, drop it, — cover it up, cover it up, — pull it up, pull it up, pull it up.” But this was not corn, and so it was safe from such enemies as he. You may wonder what his rigmarole, his amateur Paganini performances on one string or on twenty, have to do with your planting, and yet prefer it to leached ashes or plaster. It was a cheap sort of top dressing in which I had entire faith.

As I drew a still fresher soil about the rows with my hoe, I disturbed the ashes of unchronicled nations who in primeval years lived under these heavens, and their small implements of war and hunting were brought to the light of this modern day. They lay mingled with other natural stones, some of which bore the marks of having been burned by Indian fires, and some by the sun, and also bits of pottery and glass brought hither by the recent cultivators of the soil. When my hoe tinkled against the stones, that music echoed to the woods and the sky, and was an accompaniment to my labor which yielded an instant and immeasurable crop. It was no longer beans that I hoed, nor I that hoed beans; and I remembered with as much pity as pride, if I remembered at all, my acquaintances who had gone to the city to attend the oratorios. The nighthawk circled overhead in the sunny afternoons — for I sometimes made a day of it — like a mote in the eye, or in heaven's eye, falling from time to time with a swoop

and a sound as if the heavens were rent, torn at last to very rags and tatters, and yet a seamless cope remained; small imps that fill the air and lay their eggs on the ground on bare sand or rocks on the tops of hills, where few have found them; graceful and slender like ripples caught up from the pond, as leaves are raised by the wind to float in the heavens; such kindredship is in nature. The hawk is aerial brother of the wave which he sails over and surveys, those his perfect air-inflated wings answering to the elemental unfledged pinions of the sea. Or sometimes I watched a pair of hen-hawks circling high in the sky, alternately soaring and descending, approaching and leaving one another, as if they were the embodiment of my own thoughts. Or I was attracted by the passage of wild pigeons from this wood to that, with a slight quivering winnowing sound and carrier haste; or from under a rotten stump my hoe turned up a sluggish portentous and outlandish spotted salamander, a trace of Egypt and the Nile, yet our contemporary. When I paused to lean on my hoe, these sounds and sights I heard and saw anywhere in the row, a part of the inexhaustible entertainment which the country offers.

On gala days the town fires its great guns, which echo like popguns to these woods, and some waifs of martial music occasionally penetrate thus far. To me, away there in my bean-field at the other end of the town, the big guns sounded as if a puffball had burst; and when there was a military turnout of which I was ignorant, I have sometimes had a vague sense all the day of some sort of itching and disease in the horizon, as if some

eruption would break out there soon, either scarlatina or canker-rash, until at length some more favorable puff of wind, making haste over the fields and up the Wayland road, brought me information of the "trainers." It seemed by the distant hum as if somebody's bees had swarmed, and that the neighbors, according to Virgil's advice, by a faint *tintinnabulum* upon the most sonorous of their domestic utensils, were endeavoring to call them down into the hive again. And when the sound died quite away, and the hum had ceased, and the most favorable breezes told no tale, I knew that they had got the last drone of them all safely into the Middlesex hive, and that now their minds were bent on the honey with which it was smeared.

I felt proud to know that the liberties of Massachusetts and of our fatherland were in such safe keeping; and as I turned to my hoeing again I was filled with an inexpressible confidence, and pursued my labor cheerfully with a calm trust in the future.

When there were several bands of musicians, it sounded as if all the village was a vast bellows, and all the buildings expanded and collapsed alternately with a din. But sometimes it was a really noble and inspiring strain that reached these woods, and the trumpet that sings of fame, and I felt as if I could spit a Mexican with a good relish, — for why should we always stand for trifles? — and looked round for a woodchuck or a skunk to exercise my chivalry upon. These martial strains seemed as far away as Palestine, and reminded me of a march of crusaders in the horizon, with a slight tantivy and tremulous motion of the elm tree tops which

overhang the village. This was one of the *great* days; though the sky had from my clearing only the same everlastingly great look that it wears daily, and I saw no difference in it.

It was a singular experience that long acquaintance which I cultivated with beans, what with planting, and hoeing, and harvesting, and threshing, and picking over and selling them, — the last was the hardest of all, — I might add eating, for I did taste. I was determined to know beans. When they were growing, I used to hoe from five o'clock in the morning till noon, and commonly spent the rest of the day about other affairs. Consider the intimate and curious acquaintance one makes with various kinds of weeds, — it will bear some iteration in the account, for there was no little iteration in the labor, — disturbing their delicate organizations so ruthlessly, and making such invidious distinctions with his hoe, levelling whole ranks of one species, and sedulously cultivating another. That's Roman wormwood, — that's pigweed, — that's sorrel, — that's piper-grass, — have at him, chop him up, turn his roots upward to the sun, don't let him have a fibre in the shade, if you do he'll turn himself t'other side up and be as green as a leek in two days. A long war, not with cranes, but with weeds, those Trojans who had sun and rain and dews on their side. Daily the beans saw me come to their rescue armed with a hoe, and thin the ranks of their enemies, filling up the trenches with weedy dead. Many a lusty crest-waving Hector, that towered a whole foot above his crowding comrades, fell before my weapon and rolled in the dust.

Those summer days which some of my contemporaries devoted to the fine arts in Boston or Rome, and others to contemplation in India, and others to trade in London or New York, I thus, with the other farmers of New England, devoted to husbandry. Not that I wanted beans to eat, for I am by nature a Pythagorean, so far as beans are concerned, whether they mean porridge or voting, and exchanged them for rice; but, perchance, as some must work in fields if only for the sake of tropes and expression, to serve a parable-maker one day. It was on the whole a rare amusement, which, continued too long, might have become a dissipation. Though I gave them no manure, and did not hoe them all once, I hoed them unusually well as far as I went, and was paid for it in the end, "there being in truth," as Evelyn says, "no compost or lætation whatsoever comparable to this continual motion, repastination, and turning of the mould with the spade." "The earth," he adds elsewhere, "especially if fresh, has a certain magnetism in it, by which it attracts the salt, power, or virtue (call it either) which gives it life, and is the logic of all the labor and stir we keep about it, to sustain us; all dungings and other sordid temperings being but the vicars succedaneous to this improvement." Moreover, this being one of those "worn-out and exhausted lay fields which enjoy their sabbath," had perchance, as Sir Kenelm Digby thinks likely, attracted "vital spirits" from the air. I harvested twelve bushels of beans.

But to be more particular, for it is complained that Mr. Colman has reported chiefly the expensive experiments of gentlemen farmers, my outgoes were, —

For a hoe	\$0 54	
Plowing, harrowing, and furrowing	7 50	Too much
Beans for seed	3 12½	
Potatoes “	1 33	
Peas “	0 40	
Turnip seed	0 06	
White line for crow fence	0 02	
Horse cultivator and boy three hours	1 00	
Horse and cart to get crop	0 75	
<hr/>		
In all	\$14 72½	

My income was (*patremfamilias vendacem, non emacem esse oportet*), from

Nine bushels and twelve quarts of beans sold	\$16 94	
Five “ large potatoes	2 50	
Nine “ small	2 25	
Grass	1 00	
Stalks	0 75	
<hr/>		
In all	\$23 44	
Leaving a pecuniary profit, as I have elsewhere said, of	\$8 71½	

This is the result of my experience in raising beans: Plant the common small white bush bean about the first of June, in rows three feet by eighteen inches apart, being careful to select fresh round and unmixed seed. First look out for worms, and supply vacancies by planting anew. Then look out for woodchucks, if it is an exposed place, for they will nibble off the earliest tender leaves almost clean as they go; and again, when the young tendrils make their appearance, they have notice of it.

and will shear them off with both buds and young pods, sitting erect like a squirrel. But above all harvest as early as possible, if you would escape frosts and have a fair and salable crop; you may save much loss by this means.

This further experience also I gained: I said to myself, I will not plant beans and corn with so much industry another summer, but such seeds, if the seed is not lost, as sincerity, truth, simplicity, faith, innocence, and the like, and see if they will not grow in this soil, even with less toil and manurance, and sustain me, for surely it has not been exhausted for these crops. Alas! I said this to myself; but now another summer is gone, and another, and another, and I am obliged to say to you, Reader, that the seeds which I planted, if indeed they *were* the seeds of those virtues, were wormeaten or had lost their vitality, and so did not come up. Commonly men will only be brave as their fathers were brave, or timid. This generation is very sure to plant corn and beans each new year precisely as the Indians did centuries ago and taught the first settlers to do, as if there were a fate in it. I saw an old man the other day, to my astonishment, making the holes with a hoe for the seventieth time at least, and not for himself to lie down in! But why should not the New Englander try new adventures, and not lay so much stress on his grain, his potato and grass crop, and his orchards, — raise other crops than these? Why concern ourselves so much about our beans for seed, and not be concerned at all about a new generation of men? We should really be fed and cheered if when we met a man we were sure to see that

some of the qualities which I have named, which we all prize more than those other productions, but which are for the most part broadcast and floating in the air, had taken root and grown in him. Here comes such a subtle and ineffable quality, for instance, as truth or justice, though the slightest amount or new variety of it, along the road. Our ambassadors should be instructed to send home such seeds as these, and Congress help to distribute them over all the land. We should never stand upon ceremony with sincerity. We should never cheat and insult and banish one another by our meanness, if there were present the kernel of worth and friendliness. We should not meet thus in haste. Most men I do not meet at all, for they seem not to have time; they are busy about their beans. We would not deal with a man thus plodding ever, leaning on a hoe or a spade as a staff between his work, not as a mushroom, but partially risen out of the earth, something more than erect, like swallows alighted and walking on the ground: —

“And as he spake, his wings would now and then
Spread, as he meant to fly, then close again, —”

so that we should suspect that we might be conversing with an angel. Bread may not always nourish us; but it always does us good, it even takes stiffness out of our joints, and makes us supple and buoyant, when we knew not what ailed us, to recognize any generosity in man or Nature, to share any unmixed and heroic joy.

Ancient poetry and mythology suggest, at least, that husbandry was once a sacred art; but it is pursued with irreverent haste and heedlessness by us, our object being

to have large farms and large crops merely. We have no festival, nor procession, nor ceremony, not excepting our cattle-shows and so-called Thanksgivings, by which the farmer expresses a sense of the sacredness of his calling, or is reminded of its sacred origin. It is the premium and the feast which tempt him. He sacrifices not to Ceres and the Terrestrial Jove, but to the infernal Plutus rather. By avarice and selfishness, and a groveling habit, from which none of us is free, of regarding the soil as property, or the means of acquiring property chiefly, the landscape is deformed, husbandry is degraded with us, and the farmer leads the meanest of lives. He knows Nature but as a robber. Cato says that the profits of agriculture are particularly pious or just (*maximeque pius quaestus*), and according to Varro the old Romans "called the same earth Mother and Ceres, and thought that they who cultivated it led a pious and useful life, and that they alone were left of the race of King Saturn."

We are wont to forget that the sun looks on our cultivated fields and on the prairies and forests without distinction. They all reflect and absorb his rays alike, and the former make but a small part of the glorious picture which he beholds in his daily course. In his view the earth is all equally cultivated like a garden. Therefore we should receive the benefit of his light and heat with a corresponding trust and magnanimity. What though I value the seed of these beans, and harvest that in the fall of the year? This broad field which I have looked at so long looks not to me as the principal cultivator, but away from me to influences more genial to it, which

water and make it green. These beans have results which are not harvested by me. Do they not grow for woodchucks partly? The ear of wheat (in Latin *spica*, obsoletely *specā*, from *spe*, hope) should not be the only hope of the husbandman; its kernel or grain (*granum*, from *gerendo*, bearing) is not all that it bears. How, then, can our harvest fail? Shall I not rejoice also at the abundance of the weeds whose seeds are the granary of the birds? It matters little comparatively whether the fields fill the farmer's barns. The true husbandman will cease from anxiety, as the squirrels manifest no concern whether the woods will bear chestnuts this year or not, and finish his labor with every day, relinquishing all claim to the produce of his fields, and sacrificing in his mind not only his first but his last fruits also.

VIII

THE VILLAGE

AFTER hoeing, or perhaps reading and writing, in the forenoon, I usually bathed again in the pond, swimming across one of its coves for a stint, and washed the dust of labor from my person, or smoothed out the last wrinkle which study had made, and for the afternoon was absolutely free. Every day or two I strolled to the village to hear some of the gossip which is incessantly going on there, circulating either from mouth to mouth, or from newspaper to newspaper, and which, taken in homœopathic doses, was really as refreshing in its way as the rustle of leaves and the peeping of frogs. As I walked in the woods to see the birds and squirrels, so I walked in the village to see the men and boys; instead of the wind among the pines I heard the carts rattle. In one direction from my house there was a colony of muskrats in the river meadows; under the grove of elms and buttonwoods in the other horizon was a village of busy men, as curious to me as if they had been prairie-dogs, each sitting at the mouth of its burrow, or running over to a neighbor's to gossip. I went there frequently to observe their habits. The village appeared to me a great news room; and on one side, to support it, as once at Redding & Company's on State Street, they kept nuts and raisins, or salt and meal and other groceries. Some

have such a vast appetite for the former commodity, that is, the news, and such sound digestive organs, that they can sit forever in public avenues without stirring, and let it simmer and whisper through them like the Etesian winds, or as if inhaling ether, it only producing numbness and insensibility to pain, — otherwise it would often be painful to hear, — without affecting the consciousness. I hardly ever failed, when I rambled through the village, to see a row of such worthies, either sitting on a ladder sunning themselves, with their bodies inclined forward and their eyes glancing along the line this way and that, from time to time, with a voluptuous expression, or else leaning against a barn with their hands in their pockets, like caryatides, as if to prop it up. They, being commonly out of doors, heard whatever was in the wind. These are the coarsest mills, in which all gossip is first rudely digested or cracked up before it is emptied into finer and more delicate hoppers within doors. I observed that the vitals of the village were the grocery, the bar-room, the post-office, and the bank; and, as a necessary part of the machinery, they kept a bell, a big gun, and a fire-engine, at convenient places; and the houses were so arranged as to make the most of mankind, in lanes and fronting one another, so that every traveller had to run the gauntlet, and every man, woman, and child might get a lick at him. Of course, those who were stationed nearest to the head of the line, where they could most see and be seen, and have the first blow at him, paid the highest prices for their places; and the few straggling inhabitants in the outskirts, where long gaps in the line began to occur, and the traveller

could get over walls or turn aside into cow-paths, and so escape, paid a very slight ground or window tax. Signs were hung out on all sides to allure him; some to catch him by the appetite, as the tavern and victualling cellar; some by the fancy, as the dry goods store and the jeweller's; and others by the hair or the feet or the skirts, as the barber, the shoemaker, or the tailor. Besides, there was a still more terrible standing invitation to call at every one of these houses, and company expected about these times. For the most part I escaped wonderfully from these dangers, either by proceeding at once boldly and without deliberation to the goal, as is recommended to those who run the gauntlet, or by keeping my thoughts on high things, like Orpheus, who, "loudly singing the praises of the gods to his lyre, drowned the voices of the Sirens, and kept out of danger." Sometimes I bolted suddenly, and nobody could tell my whereabouts, for I did not stand much about gracefulness, and never hesitated at a gap in a fence. I was even accustomed to make an irruption into some houses, where I was well entertained, and after learning the kernels and very last sieveful of news, — what had subsided, the prospects of war and peace, and whether the world was likely to hold together much longer, — I was let out through the rear avenues, and so escaped to the woods again.

It was very pleasant, when I stayed late in town, to launch myself into the night, especially if it was dark and tempestuous, and set sail from some bright village parlor or lecture room, with a bag of rye or Indian meal upon my shoulder, for my snug harbor in the woods, having made all tight without and withdrawn under

hatches with a merry crew of thoughts, leaving only my outer man at the helm, or even tying up the helm when it was plain sailing. I had many a genial thought by the cabin fire "as I sailed." I was never cast away nor distressed in any weather, though I encountered some severe storms. It is darker in the woods, even in common nights, than most suppose. I frequently had to look up at the opening between the trees above the path in order to learn my route, and, where there was no cart-path, to feel with my feet the faint track which I had worn, or steer by the known relation of particular trees which I felt with my hands, passing between two pines for instance, not more than eighteen inches apart, in the midst of the woods, invariably, in the darkest night. Sometimes, after coming home thus late in a dark and muggy night, when my feet felt the path which my eyes could not see, dreaming and absent-minded all the way, until I was aroused by having to raise my hand to lift the latch, I have not been able to recall a single step of my walk, and I have thought that perhaps my body would find its way home if its master should forsake it, as the hand finds its way to the mouth without assistance. Several times, when a visitor chanced to stay into evening, and it proved a dark night, I was obliged to conduct him to the cart-path in the rear of the house, and then point out to him the direction he was to pursue, and in keeping which he was to be guided rather by his feet than his eyes. One very dark night I directed thus on their way two young men who had been fishing in the pond. They lived about a mile off through the woods, and were quite used to the route. A day or two after one

of them told me that they wandered about the greater part of the night, close by their own premises, and did not get home till toward morning, by which time, as there had been several heavy showers in the meanwhile, and the leaves were very wet, they were drenched to their skins. I have heard of many going astray even in the village streets, when the darkness was so thick that you could cut it with a knife, as the saying is. Some who live in the outskirts, having come to town a-shopping in their wagons, have been obliged to put up for the night; and gentlemen and ladies making a call have gone half a mile out of their way, feeling the sidewalk only with their feet, and not knowing when they turned. It is a surprising and memorable, as well as valuable experience, to be lost in the woods any time. Often in a snow-storm, even by day, one will come out upon a well-known road and yet find it impossible to tell which way leads to the village. Though he knows that he has travelled it a thousand times, he cannot recognize a feature in it, but it is as strange to him as if it were a road in Siberia. By night, of course, the perplexity is infinitely greater. In our most trivial walks, we are constantly, though unconsciously, steering like pilots by certain well-known beacons and headlands, and if we go beyond our usual course we still carry in our minds the bearing of some neighboring cape; and not till we are completely lost, or turned round, — for a man needs only to be turned round once with his eyes shut in this world to be lost, — do we appreciate the vastness and strangeness of nature. Every man has to learn the points of compass again as often as he awakes, whether

from sleep or any abstraction. Not till we are lost, in other words not till we have lost the world, do we begin to find ourselves, and realize where we are and the infinite extent of our relations.

One afternoon, near the end of the first summer, when I went to the village to get a shoe from the cobbler's, I was seized and put into jail, because, as I have elsewhere related, I did not pay a tax to, or recognize the authority of, the State which buys and sells men, women, and children, like cattle, at the door of its senate-house. I had gone down to the woods for other purposes. But, wherever a man goes, men will pursue and paw him with their dirty institutions, and, if they can, constrain him to belong to their desperate odd-fellow society. It is true, I might have resisted forcibly with more or less effect, might have run "amok" against society; but I preferred that society should run "amok" against me, it being the desperate party. However, I was released the next day, obtained my mended shoe, and returned to the woods in season to get my dinner of huckleberries on Fair Haven Hill. I was never molested by any person but those who represented the State. I had no lock nor bolt but for the desk which held my papers, not even a nail to put over my latch or windows. I never fastened my door night or day, though I was to be absent several days; not even when the next fall I spent a fortnight in the woods of Maine. And yet my house was more respected than if it had been surrounded by a file of soldiers. The tired Rambler could rest and warm himself by my fire, the literary amuse himself with the few books on my table, or the curious, by opening my closet door, see

what was left of my dinner, and what prospect I had of a supper. Yet, though many people of every class came this way to the pond, I suffered no serious inconvenience from these sources, and I never missed anything but one small book, a volume of Homer, which perhaps was improperly gilded, and this I trust a soldier of our camp has found by this time. I am convinced, that if all men were to live as simply as I then did, thieving and robbery would be unknown. These take place only in communities where some have got more than is sufficient while others have not enough. The Pope's Homers would soon get properly distributed.

“Nec bella fuerunt,
Faginus astabat dum scyphus ante dapes.”

“Nor wars did men molest,
When only beechen bowls were in request.”

“You who govern public affairs, what need have you to employ punishments? Love virtue, and the people will be virtuous. The virtues of a superior man are like the wind; the virtues of a common man are like the grass; the grass, when the wind passes over it, bends.”

IX

THE PONDS

SOMETIMES, having had a surfeit of human society and gossip, and worn out all my village friends, I rambled still farther westward than I habitually dwell, into yet more unfrequented parts of the town, "to fresh woods and pastures new," or, while the sun was setting, made my supper of huckleberries and blueberries on Fair Haven Hill, and laid up a store for several days. The fruits do not yield their true flavor to the purchaser of them, nor to him who raises them for the market. There is but one way to obtain it, yet few take that way. If you would know the flavor of huckleberries, ask the cow-boy or the partridge. It is a vulgar error to suppose that you have tasted huckleberries who never plucked them. A huckleberry never reaches Boston; they have not been known there since they grew on her three hills. The ambrosial and essential part of the fruit is lost with the bloom which is rubbed off in the market cart, and they become mere provender. As long as Eternal Justice reigns, not one innocent huckleberry can be transported thither from the country's hills.

Occasionally, after my hoeing was done for the day, I joined some impatient companion who had been fishing on the pond since morning, as silent and motionless as a duck or a floating leaf, and, after practising various

kinds of philosophy, had concluded commonly, by the time I arrived, that he belonged to the ancient sect of Cœnobites. There was one older man, an excellent fisher and skilled in all kinds of woodcraft, who was pleased to look upon my house as a building erected for the convenience of fishermen; and I was equally pleased when he sat in my doorway to arrange his lines. Once in a while we sat together on the pond, he at one end of the boat, and I at the other; but not many words passed between us, for he had grown deaf in his later years, but he occasionally hummed a psalm, which harmonized well enough with my philosophy. Our intercourse was thus altogether one of unbroken harmony, far more pleasing to remember than if it had been carried on by speech. When, as was commonly the case, I had none to commune with, I used to raise the echoes by striking with a paddle on the side of my boat, filling the surrounding woods with circling and dilating sound, stirring them up as the keeper of a menagerie his wild beasts, until I elicited a growl from every wooded vale and hillside.

In warm evenings I frequently sat in the boat playing the flute, and saw the perch, which I seem to have charmed, hovering around me, and the moon travelling over the ribbed bottom, which was strewn with the wrecks of the forest. Formerly I had come to this pond adventurously, from time to time, in dark summer nights, with a companion, and, making a fire close to the water's edge, which we thought attracted the fishes, we caught pouts with a bunch of worms strung on a thread, and when we had done, far in the night, threw the burn-

ing brands high into the air like skyrocket, which, coming down into the pond, were quenched with a loud hissing, and we were suddenly groping in total darkness. Through this, whistling a tune, we took our way to the haunts of men again. But now I had made my home by the shore.

Sometimes, after staying in a village parlor till the family had all retired, I have returned to the woods, and, partly with a view to the next day's dinner, spent the hours of midnight fishing from a boat by moonlight, serenaded by owls and foxes, and hearing, from time to time, the creaking note of some unknown bird close at hand. These experiences were very memorable and valuable to me, — anchored in forty feet of water, and twenty or thirty rods from the shore, surrounded sometimes by thousands of small perch and shiners, dimpling the surface with their tails in the moonlight, and communicating by a long flaxen line with mysterious nocturnal fishes which had their dwelling forty feet below, or sometimes dragging sixty feet of line about the pond as I drifted in the gentle night breeze, now and then feeling a slight vibration along it, indicative of some life prowling about its extremity, of dull uncertain blundering purpose there, and slow to make up its mind. At length you slowly raise, pulling hand over hand, some horned pout squeaking and squirming to the upper air. It was very queer, especially in dark nights, when your thoughts had wandered to vast and cosmogonical themes in other spheres, to feel this faint jerk, which came to interrupt your dreams and link you to Nature again. It seemed as if I might next cast

my line upward into the air, as well as downward into this element, which was scarcely more dense. Thus I caught two fishes as it were with one hook.

The scenery of Walden is on a humble scale, and, though very beautiful, does not approach to grandeur, nor can it much concern one who has not long frequented it or lived by its shore; yet this pond is so remarkable for its depth and purity as to merit a particular description. It is a clear and deep green well, half a mile long and a mile and three quarters in circumference, and contains about sixty-one and a half acres; a perennial spring in the midst of pine and oak woods, without any visible inlet or outlet except by the clouds and evaporation. The surrounding hills rise abruptly from the water to the height of forty to eighty feet, though on the southeast and east they attain to about one hundred and one hundred and fifty feet respectively, within a quarter and a third of a mile. They are exclusively woodland. All our Concord waters have two colors at least; one when viewed at a distance, and another, more proper, close at hand. The first depends more on the light, and follows the sky. In clear weather, in summer, they appear blue at a little distance, especially if agitated, and at a great distance all appear alike. In stormy weather they are sometimes of a dark slate-color. The sea, however, is said to be blue one day and green another without any perceptible change in the atmosphere. I have seen our river, when, the landscape being covered with snow, both water and ice were almost as green as grass. Some consider blue "to be the color of pure

water, whether liquid or solid." But, looking directly down into our waters from a boat, they are seen to be of very different colors. Walden is blue at one time and green at another, even from the same point of view. Lying between the earth and the heavens, it partakes of the color of both. Viewed from a hilltop it reflects the color of the sky; but near at hand it is of a yellowish tint next the shore where you can see the sand, then a light green, which gradually deepens to a uniform dark green in the body of the pond. In some lights, viewed even from a hilltop, it is of a vivid green next the shore. Some have referred this to the reflection of the verdure; but it is equally green there against the railroad sand-bank, and in the spring, before the leaves are expanded, and it may be simply the result of the prevailing blue mixed with the yellow of the sand. Such is the color of its iris. This is that portion, also, where in the spring, the ice being warmed by the heat of the sun reflected from the bottom, and also transmitted through the earth, melts first and forms a narrow canal about the still frozen middle. Like the rest of our waters, when much agitated, in clear weather, so that the surface of the waves may reflect the sky at the right angle, or because there is more light mixed with it, it appears at a little distance of a darker blue than the sky itself; and at such a time, being on its surface, and looking with divided vision, so as to see the reflection, I have discerned a matchless and indescribable light blue, such as watered or changeable silks and sword blades suggest, more cerulean than the sky itself, alternating with the original dark green on the opposite sides of the waves, which

last appeared but muddy in comparison. It is a vitreous greenish blue, as I remember it, like those patches of the winter sky seen through cloud vistas in the west before sundown. Yet a single glass of its water held up to the light is as colorless as an equal quantity of air. It is well known that a large plate of glass will have a green tint, owing, as the makers say, to its "body," but a small piece of the same will be colorless. How large a body of Walden water would be required to reflect a green tint I have never proved. The water of our river is black or a very dark brown to one looking directly down on it, and, like that of most ponds, imparts to the body of one bathing in it a yellowish tinge; but this water is of such crystalline purity that the body of the bather appears of an alabaster whiteness, still more unnatural, which, as the limbs are magnified and distorted withal, produces a monstrous effect, making fit studies for a Michael Angelo.

The water is so transparent that the bottom can easily be discerned at the depth of twenty-five or thirty feet. Paddling over it, you may see, many feet beneath the surface, the schools of perch and shiners, perhaps only an inch long, yet the former easily distinguished by their transverse bars, and you think that they must be ascetic fish that find a subsistence there. Once, in the winter, many years ago, when I had been cutting holes through the ice in order to catch pickerel, as I stepped ashore I tossed my axe back on to the ice, but, as if some evil genius had directed it, it slid four or five rods directly into one of the holes, where the water was twenty-five feet deep. Out of curiosity, I lay down on

the ice and looked through the hole, until I saw the axe a little on one side, standing on its head, with its helve erect and gently swaying to and fro with the pulse of the pond; and there it might have stood erect and swaying till in the course of time the handle rotted off, if I had not disturbed it. Making another hole directly over it with an ice chisel which I had, and cutting down the longest birch which I could find in the neighborhood with my knife, I made a slip-noose, which I attached to its end, and, letting it down carefully, passed it over the knob of the handle, and drew it by a line along the birch, and so pulled the axe out again.

The shore is composed of a belt of smooth rounded white stones like paving-stones, excepting one or two short sand beaches, and is so steep that in many places a single leap will carry you into water over your head; and were it not for its remarkable transparency, that would be the last to be seen of its bottom till it rose on the opposite side. Some think it is bottomless. It is nowhere muddy, and a casual observer would say that there were no weeds at all in it; and of noticeable plants, except in the little meadows recently overflowed, which do not properly belong to it, a closer scrutiny does not detect a flag nor a bulrush, nor even a lily, yellow or white, but only a few small heart-leaves and potamogetons, and perhaps a water-target or two; all which however a bather might not perceive; and these plants are clean and bright like the element they grow in. The stones extend a rod or two into the water, and then the bottom is pure sand, except in the deepest parts, where there is usually a little sediment, probably from the de-

cay of the leaves which have been wafted on to it so many successive falls, and a bright green weed is brought up on anchors even in midwinter.

We have one other pond just like this, White Pond, in Nine Acre Corner, about two and a half miles westerly ; but, though I am acquainted with most of the ponds within a dozen miles of this centre, I do not know a third of this pure and well-like character. Successive nations perchance have drank at, admired, and fathomed it, and passed away, and still its water is green and pellucid as ever. Not an intermitting spring! Perhaps on that spring morning when Adam and Eve were driven out of Eden Walden Pond was already in existence, and even then breaking up in a gentle spring rain accompanied with mist and a southerly wind, and covered with myriads of ducks and geese, which had not heard of the fall, when still such pure lakes sufficed them. Even then it had commenced to rise and fall, and had clarified its waters and colored them of the hue they now wear, and obtained a patent of Heaven to be the only Walden Pond in the world and distiller of celestial dews. Who knows in how many unremembered nations' literatures this has been the Castalian Fountain? or what nymphs presided over it in the Golden Age? It is a gem of the first water which Concord wears in her coronet.

Yet perchance the first who came to this well have left some trace of their footsteps. I have been surprised to detect encircling the pond, even where a thick wood has just been cut down on the shore, a narrow shelf-like path in the steep hillside, alternately rising and falling,

approaching and receding from the water's edge, as old probably as the race of man here, worn by the feet of aboriginal hunters, and still from time to time unwittingly trodden by the present occupants of the land. This is particularly distinct to one standing on the middle of the pond in winter, just after a light snow has fallen, appearing as a clear undulating white line, unobscured by weeds and twigs, and very obvious a quarter of a mile off in many places where in summer it is hardly distinguishable close at hand. The snow reprints it, as it were, in clear white type alto-relievo. The ornamented grounds of villas which will one day be built here may still preserve some trace of this.

The pond rises and falls, but whether regularly or not, and within what period, nobody knows, though, as usual, many pretend to know. It is commonly higher in the winter and lower in the summer, though not corresponding to the general wet and dryness. I can remember when it was a foot or two lower, and also when it was at least five feet higher, than when I lived by it. There is a narrow sand-bar running into it, with very deep water on one side, on which I helped boil a kettle of chowder, some six rods from the main shore, about the year 1824, which it has not been possible to do for twenty-five years; and, on the other hand, my friends used to listen with incredulity when I told them, that a few years later I was accustomed to fish from a boat in a secluded cove in the woods, fifteen rods from the only shore they knew, which place was long since converted into a meadow. But the pond has risen steadily for two years, and now, in the summer of '52, is just

five feet higher than when I lived there, or as high as it was thirty years ago, and fishing goes on again in the meadow. This makes a difference of level, at the outside, of six or seven feet; and yet the water shed by the surrounding hills is insignificant in amount, and this overflow must be referred to causes which affect the deep springs. This same summer the pond has begun to fall again. It is remarkable that this fluctuation, whether periodical or not, appears thus to require many years for its accomplishment. I have observed one rise and a part of two falls, and I expect that a dozen or fifteen years hence the water will again be as low as I have ever known it. Flint's Pond, a mile eastward, allowing for the disturbance occasioned by its inlets and outlets, and the smaller intermediate ponds also, sympathize with Walden, and recently attained their greatest height at the same time with the latter. The same is true, as far as my observation goes, of White Pond.

This rise and fall of Walden at long intervals serves this use at least; the water standing at this great height for a year or more, though it makes it difficult to walk round it, kills the shrubs and trees which have sprung up about its edge since the last rise, — pitch pines, birches, alders, aspens, and others, — and, falling again, leaves an unobstructed shore; for, unlike many ponds and all waters which are subject to a daily tide, its shore is cleanest when the water is lowest. On the side of the pond next my house a row of pitch pines, fifteen feet high, has been killed and tipped over as if by a lever, and thus a stop put to their encroachments; and their size indicates how many years have elapsed since the

last rise to this height. By this fluctuation the pond asserts its title to a shore, and thus the *shore* is *shorn*, and the trees cannot hold it by right of possession. These are the lips of the lake, on which no beard grows. It licks its chaps from time to time. When the water is at its height, the alders, willows, and maples send forth a mass of fibrous red roots several feet long from all sides of their stems in the water, and to the height of three or four feet from the ground, in the effort to maintain themselves; and I have known the high blueberry bushes about the shore, which commonly produce no fruit, bear an abundant crop under these circumstances.

Some have been puzzled to tell how the shore became so regularly paved. My townsmen have all heard the tradition—the oldest people tell me that they heard it in their youth—that anciently the Indians were holding a pow-wow upon a hill here, which rose as high into the heavens as the pond now sinks deep into the earth, and they used much profanity, as the story goes, though this vice is one of which the Indians were never guilty, and while they were thus engaged the hill shook and suddenly sank, and only one old squaw, named Walden, escaped, and from her the pond was named. It has been conjectured that when the hill shook these stones rolled down its side and became the present shore. It is very certain, at any rate, that once there was no pond here, and now there is one; and this Indian fable does not in any respect conflict with the account of that ancient settler whom I have mentioned, who remembers so well when he first came here with his divining-rod, saw a

thin vapor rising from the sward, and the hazel pointed steadily downward, and he concluded to dig a well here. As for the stones, many still think that they are hardly to be accounted for by the action of the waves on these hills; but I observe that the surrounding hills are remarkably full of the same kind of stones, so that they have been obliged to pile them up in walls on both sides of the railroad cut nearest the pond; and, moreover, there are most stones where the shore is most abrupt; so that, unfortunately, it is no longer a mystery to me. I detect the paver. If the name was not derived from that of some English locality, — Saffron Walden, for instance, — one might suppose that it was called originally *Walled-in Pond*.

The pond was my well ready dug. For four months in the year its water is as cold as it is pure at all times; and I think that it is then as good as any, if not the best, in the town. In the winter, all water which is exposed to the air is colder than springs and wells which are protected from it. The temperature of the pond water which had stood in the room where I sat from five o'clock in the afternoon till noon the next day, the sixth of March, 1846, the thermometer having been up to 65° or 70° some of the time, owing partly to the sun on the roof, was 42°, or one degree colder than the water of one of the coldest wells in the village just drawn. The temperature of the Boiling Spring the same day was 45°, or the warmest of any water tried, though it is the coldest that I know of in summer, when, beside, shallow and stagnant surface water is not mingled with it. Moreover, in summer, Walden never becomes so warm as

most water which is exposed to the sun, on account of its depth. In the warmest weather I usually placed a pailful in my cellar, where it became cool in the night, and remained so during the day; though I also resorted to a spring in the neighborhood. It was as good when a week old as the day it was dipped, and had no taste of the pump. Whoever camps for a week in summer by the shore of a pond, needs only bury a pail of water a few feet deep in the shade of his camp to be independent of the luxury of ice.

There have been caught in Walden pickerel, one weighing seven pounds, — to say nothing of another which carried off a reel with great velocity, which the fisherman safely set down at eight pounds because he did not see him, — perch and pouts, some of each weighing over two pounds, shiners, chivins or roach (*Leuciscus pulchellus*), a very few breams, and a couple of eels, one weighing four pounds, — I am thus particular because the weight of a fish is commonly its only title to fame, and these are the only eels I have heard of here; — also, I have a faint recollection of a little fish some five inches long, with silvery sides and a greenish back, somewhat dace-like in its character, which I mention here chiefly to link my facts to fable. Nevertheless, this pond is not very fertile in fish. Its pickerel, though not abundant, are its chief boast. I have seen at one time lying on the ice pickerel of at least three different kinds: a long and shallow one, steel-colored, most like those caught in the river; a bright golden kind, with greenish reflections and remarkably deep, which is the most common here; and another, golden-colored, and

shaped like the last, but peppered on the sides with small dark brown or black spots, intermixed with a few faint blood-red ones, very much like a trout. The specific name *reticulatus* would not apply to this; it should be *guttatus* rather. These are all very firm fish, and weigh more than their size promises. The shiners, pouts, and perch also, and indeed all the fishes which inhabit this pond, are much cleaner, handsomer, and firmer-fleshed than those in the river and most other ponds, as the water is purer, and they can easily be distinguished from them. Probably many ichthyologists would make new varieties of some of them. There are also a clean race of frogs and tortoises, and a few mussels in it; muskrats and minks leave their traces about it, and occasionally a travelling mud-turtle visits it. Sometimes, when I pushed off my boat in the morning, I disturbed a great mud-turtle which had secreted himself under the boat in the night. Ducks and geese frequent it in the spring and fall, the white-bellied swallows (*Hirundo bicolor*) skim over it, and the peewees (*Totanus macularius*) "teeter" along its stony shores all summer. I have sometimes disturbed a fish hawk sitting on a white pine over the water; but I doubt if it is ever profaned by the wing of a gull, like Fair Haven. At most, it tolerates one annual loon. These are all the animals of consequence which frequent it now.

You may see from a boat, in calm weather, near the sandy eastern shore, where the water is eight or ten feet deep, and also in some other parts of the pond, some circular heaps half a dozen feet in diameter by a foot in height, consisting of small stones less than a

hen's egg in size, where all around is bare sand. At first you wonder if the Indians could have formed them on the ice for any purpose, and so, when the ice melted, they sank to the bottom; but they are too regular and some of them plainly too fresh for that. They are similar to those found in rivers; but as there are no suckers nor lampreys here, I know not by what fish they could be made. Perhaps they are the nests of the chivin. These lend a pleasing mystery to the bottom.

The shore is irregular enough not to be monotonous. I have in my mind's eye the western, indented with deep bays, the bolder northern, and the beautifully scalloped southern shore, where successive capes overlap each other and suggest unexplored coves between. The forest has never so good a setting, nor is so distinctly beautiful, as when seen from the middle of a small lake amid hills which rise from the water's edge; for the water in which it is reflected not only makes the best foreground in such a case, but, with its winding shore, the most natural and agreeable boundary to it. There is no rawness nor imperfection in its edge there, as where the axe has cleared a part, or a cultivated field abuts on it. The trees have ample room to expand on the water side, and each sends forth its most vigorous branch in that direction. There Nature has woven a natural selvage, and the eye rises by just gradations from the low shrubs of the shore to the highest trees. There are few traces of man's hand to be seen. The water laves the shore as it did a thousand years ago.

A lake is the landscape's most beautiful and expressive feature. It is earth's eye; looking into which the be-

holder measures the depth of his own nature. The fluviatile trees next the shore are the slender eyelashes which fringe it, and the wooded hills and cliffs around are its overhanging brows.

Standing on the smooth sandy beach at the east end of the pond, in a calm September afternoon, when a slight haze makes the opposite shore-line indistinct, I have seen whence came the expression, "the glassy surface of a lake." When you invert your head, it looks like a thread of finest gossamer stretched across the valley, and gleaming against the distant pine woods, separating one stratum of the atmosphere from another. You would think that you could walk dry under it to the opposite hills, and that the swallows which skim over might perch on it. Indeed, they sometimes dive below the line, as it were by mistake, and are undeceived. As you look over the pond westward you are obliged to employ both your hands to defend your eyes against the reflected as well as the true sun, for they are equally bright; and if, between the two, you survey its surface critically, it is literally as smooth as glass, except where the skater insects, at equal intervals scattered over its whole extent, by their motions in the sun produce the finest imaginable sparkle on it, or, perchance, a duck plumes itself, or, as I have said, a swallow skims so low as to touch it. It may be that in the distance a fish describes an arc of three or four feet in the air, and there is one bright flash where it emerges, and another where it strikes the water; sometimes the whole silvery arc is revealed; or here and there, perhaps, is a thistle-down floating on its surface, which the fishes dart at and so

dimple it again. It is like molten glass cooled but not congealed, and the few motes in it are pure and beautiful like the imperfections in glass. You may often detect a yet smoother and darker water, separated from the rest as if by an invisible cobweb, boom of the water nymphs, resting on it. From a hilltop you can see a fish leap in almost any part; for not a pickerel or shiner picks an insect from this smooth surface but it manifestly disturbs the equilibrium of the whole lake. It is wonderful with what elaborateness this simple fact is advertised, — this piscine murder will out, — and from my distant perch I distinguish the circling undulations when they are half a dozen rods in diameter. You can even detect a water-bug (*Gyrinus*) ceaselessly progressing over the smooth surface a quarter of a mile off; for they furrow the water slightly, making a conspicuous ripple bounded by two diverging lines, but the skaters glide over it without rippling it perceptibly. When the surface is considerably agitated there are no skaters nor water-bugs on it, but apparently, in calm days, they leave their havens and adventurously glide forth from the shore by short impulses till they completely cover it. It is a soothing employment, on one of those fine days in the fall when all the warmth of the sun is fully appreciated, to sit on a stump on such a height as this, overlooking the pond, and study the dimpling circles which are incessantly inscribed on its otherwise invisible surface amid the reflected skies and trees. Over this great expanse there is no disturbance but it is thus at once gently smoothed away and assuaged, as, when a vase of water is jarred, the trembling circles seek the shore and all is

smooth again. Not a fish can leap or an insect fall on the pond but it is thus reported in circling dimples, in lines of beauty, as it were the constant welling up of its fountain, the gentle pulsing of its life, the heaving of its breast. The thrills of joy and thrills of pain are undistinguishable. How peaceful the phenomena of the lake! Again the works of man shine as in the spring. Ay, every leaf and twig and stone and cobweb sparkles now at mid-afternoon as when covered with dew in a spring morning. Every motion of an oar or an insect produces a flash of light; and if an oar falls, how sweet the echo!

In such a day, in September or October, Walden is a perfect forest mirror, set round with stones as precious to my eye as if fewer or rarer. Nothing so fair, so pure, and at the same time so large, as a lake, perchance, lies on the surface of the earth. Sky water. It needs no fence. Nations come and go without defiling it. It is a mirror which no stone can crack, whose quicksilver will never wear off, whose gilding Nature continually repairs; no storms, no dust, can dim its surface ever fresh; — a mirror in which all impurity presented to it sinks, swept and dusted by the sun's hazy brush, — this the light dust-cloth, — which retains no breath that is breathed on it, but sends its own to float as clouds high above its surface, and be reflected in its bosom still.

A field of water betrays the spirit that is in the air. It is continually receiving new life and motion from above. It is intermediate in its nature between land and sky. On land only the grass and trees wave, but the

water itself is rippled by the wind. I see where the breeze dashes across it by the streaks or flakes of light. It is remarkable that we can look down on its surface. We shall, perhaps, look down thus on the surface of air at length, and mark where a still subtler spirit sweeps over it.

The skaters and water-bugs finally disappear in the latter part of October, when the severe frosts have come; and then and in November, usually, in a calm day, there is absolutely nothing to ripple the surface. One November afternoon, in the calm at the end of a rain-storm of several days' duration, when the sky was still completely overcast and the air was full of mist, I observed that the pond was remarkably smooth, so that it was difficult to distinguish its surface; though it no longer reflected the bright tints of October, but the sombre November colors of the surrounding hills. Though I passed over it as gently as possible, the slight undulations produced by my boat extended almost as far as I could see, and gave a ribbed appearance to the reflections. But, as I was looking over the surface, I saw here and there at a distance a faint glimmer, as if some skater insects which had escaped the frosts might be collected there, or, perchance, the surface, being so smooth, betrayed where a spring welled up from the bottom. Paddling gently to one of these places, I was surprised to find myself surrounded by myriads of small perch, about five inches long, of a rich bronze color in the green water, sporting there, and constantly rising to the surface and dimpling it, sometimes leaving bubbles on it. In such transparent and seemingly bottomless

water, reflecting the clouds, I seemed to be floating through the air as in a balloon, and their swimming impressed me as a kind of flight or hovering, as if they were a compact flock of birds passing just beneath my level on the right or left, their fins, like sails, set all around them. There were many such schools in the pond, apparently improving the short season before winter would draw an icy shutter over their broad skylight, sometimes giving to the surface an appearance as if a slight breeze struck it, or a few rain-drops fell there. When I approached carelessly and alarmed them, they made a sudden splash and rippling with their tails, as if one had struck the water with a brushy bough, and instantly took refuge in the depths. At length the wind rose, the mist increased, and the waves began to run, and the perch leaped much higher than before, half out of water, a hundred black points, three inches long, at once above the surface. Even as late as the fifth of December, one year, I saw some dimples on the surface, and thinking it was going to rain hard immediately, the air being full of mist, I made haste to take my place at the oars and row homeward; already the rain seemed rapidly increasing, though I felt none on my cheek, and I anticipated a thorough soaking. But suddenly the dimples ceased, for they were produced by the perch, which the noise of my oars had scared into the depths, and I saw their schools dimly disappearing; so I spent a dry afternoon after all.

An old man who used to frequent this pond nearly sixty years ago, when it was dark with surrounding forests, tells me that in those days he sometimes saw it

all alive with ducks and other water-fowl, and that there were many eagles about it. He came here a-fishing, and used an old log canoe which he found on the shore. It was made of two white pine logs dug out and pinned together, and was cut off square at the ends. It was very clumsy, but lasted a great many years before it became water-logged and perhaps sank to the bottom. He did not know whose it was; it belonged to the pond. He used to make a cable for his anchor of strips of hickory bark tied together. An old man, a potter, who lived by the pond before the Revolution, told him once that there was an iron chest at the bottom, and that he had seen it. Sometimes it would come floating up to the shore; but when you went toward it, it would go back into deep water and disappear. I was pleased to hear of the old log canoe, which took the place of an Indian one of the same material but more graceful construction, which perchance had first been a tree on the bank, and then, as it were, fell into the water, to float there for a generation, the most proper vessel for the lake. I remember that when I first looked into these depths there were many large trunks to be seen indistinctly lying on the bottom, which had either been blown over formerly, or left on the ice at the last cutting, when wood was cheaper; but now they have mostly disappeared.

When I first paddled a boat on Walden, it was completely surrounded by thick and lofty pine and oak woods, and in some of its coves grape-vines had run over the trees next the water and formed bowers under which a boat could pass. The hills which form its shores

are so steep, and the woods on them were then so high, that, as you looked down from the west end, it had the appearance of an amphitheatre for some kind of sylvan spectacle. I have spent many an hour, when I was younger, floating over its surface as the zephyr willed, having paddled my boat to the middle, and lying on my back across the seats, in a summer forenoon, dreaming awake, until I was aroused by the boat touching the sand, and I arose to see what shore my fates had impelled me to; days when idleness was the most attractive and productive industry. Many a forenoon have I stolen away, preferring to spend thus the most valued part of the day; for I was rich, if not in money, in sunny hours and summer days, and spent them lavishly; nor do I regret that I did not waste more of them in the workshop or the teacher's desk. But since I left those shores the woodchoppers have still further laid them waste, and now for many a year there will be no more rambling through the aisles of the wood, with occasional vistas through which you see the water. My Muse may be excused if she is silent henceforth. How can you expect the birds to sing when their groves are cut down?

Now the trunks of trees on the bottom, and the old log canoe, and the dark surrounding woods, are gone, and the villagers, who scarcely know where it lies, instead of going to the pond to bathe or drink, are thinking to bring its water, which should be as sacred as the Ganges at least, to the village in a pipe, to wash their dishes with! — to earn their Walden by the turning of a cock or drawing of a plug! That devilish Iron Horse, whose

ear-rending neigh is heard throughout the town, has muddied the Boiling Spring with his foot, and he it is that has browsed off all the woods on Walden shore, that Trojan horse, with a thousand men in his belly, introduced by mercenary Greeks! Where is the country's champion, the Moore of Moore Hall, to meet him at the Deep Cut and thrust an avenging lance between the ribs of the bloated pest?

Nevertheless, of all the characters I have known, perhaps Walden wears best, and best preserves its purity. Many men have been likened to it, but few deserve that honor. Though the woodchoppers have laid bare first this shore and then that, and the Irish have built their sties by it, and the railroad has infringed on its border, and the ice-men have skimmed it once, it is itself unchanged, the same water which my youthful eyes fell on; all the change is in me. It has not acquired one permanent wrinkle after all its ripples. It is perennially young, and I may stand and see a swallow dip apparently to pick an insect from its surface as of yore. It struck me again to-night, as if I had not seen it almost daily for more than twenty years, — Why, here is Walden, the same woodland lake that I discovered so many years ago; where a forest was cut down last winter another is springing up by its shore as lustily as ever; the same thought is welling up to its surface that was then; it is the same liquid joy and happiness to itself and its Maker, ay, and it *may* be to me. It is the work of a brave man surely, in whom there was no guile! He rounded this water with his hand, deepened and clarified it in his thought, and in his will bequeathed it to Con-

cord. I see by its face that it is visited by the same reflection; and I can almost say, Walden, is it you?

It is no dream of mine,
To ornament a line;
I cannot come nearer to God and Heaven
Than I live to Walden even.
I am its stony shore,
And the breeze that passes o'er;
In the hollow of my hand
Are its water and its sand,
And its deepest resort
Lies high in my thought.

The cars never pause to look at it; yet I fancy that the engineers and firemen and brakemen, and those passengers who have a season ticket and see it often, are better men for the sight. The engineer does not forget at night, or his nature does not, that he has beheld this vision of serenity and purity once at least during the day. Though seen but once, it helps to wash out State Street and the engine's soot. One proposes that it be called "God's Drop."

I have said that Walden has no visible inlet nor outlet, but it is on the one hand distantly and indirectly related to Flint's Pond, which is more elevated, by a chain of small ponds coming from that quarter, and on the other directly and manifestly to Concord River, which is lower, by a similar chain of ponds through which in some other geological period it may have flowed, and by a little digging, which God forbid, it can be made to flow thither again. If by living thus reserved and austere, like a hermit in the woods, so long, it has acquired such

wonderful purity, who would not regret that the comparatively impure waters of Flint's Pond should be mingled with it, or itself should ever go to waste its sweetness in the ocean wave?

Flint's, or Sandy Pond, in Lincoln, our greatest lake and inland sea, lies about a mile east of Walden. It is much larger, being said to contain one hundred and ninety-seven acres, and is more fertile in fish; but it is comparatively shallow, and not remarkably pure. A walk through the woods thither was often my recreation. It was worth the while, if only to feel the wind blow on your cheek freely, and see the waves run, and remember the life of mariners. I went a-chestnutting there in the fall, on windy days, when the nuts were dropping into the water and were washed to my feet; and one day, as I crept along its sedgy shore, the fresh spray blowing in my face, I came upon the mouldering wreck of a boat, the sides gone, and hardly more than the impression of its flat bottom left amid the rushes; yet its model was sharply defined, as if it were a large decayed pad, with its veins. It was as impressive a wreck as one could imagine on the seashore, and had as good a moral. It is by this time mere vegetable mould and undistinguishable pond shore, through which rushes and flags have pushed up. I used to admire the ripple marks on the sandy bottom, at the north end of this pond, made firm and hard to the feet of the wader by the pressure of the water, and the rushes which grew in Indian file, in waving lines, corresponding to these marks, rank behind rank, as if the waves had

planted them. There also I have found, in considerable quantities, curious balls, composed apparently of fine grass or roots, of pipewort perhaps, from half an inch to four inches in diameter, and perfectly spherical. These wash back and forth in shallow water on a sandy bottom, and are sometimes cast on the shore. They are either solid grass, or have a little sand in the middle. At first you would say that they were formed by the action of the waves, like a pebble; yet the smallest are made of equally coarse materials, half an inch long, and they are produced only at one season of the year. Moreover, the waves, I suspect, do not so much construct as wear down a material which has already acquired consistency. They preserve their form when dry for an indefinite period.

Flint's Pond! Such is the poverty of our nomenclature. What right had the unclean and stupid farmer, whose farm abutted on this sky water, whose shores he has ruthlessly laid bare, to give his name to it? Some skin-flint, who loved better the reflecting surface of a dollar, or a bright cent, in which he could see his own brazen face; who regarded even the wild ducks which settled in it as trespassers; his fingers grown into crooked and horny talons from the long habit of grasping harpy-like; — so it is not named for me. I go not there to see him nor to hear of him; who never *saw* it, who never bathed in it, who never loved it, who never protected it, who never spoke a good word for it, nor thanked God that He had made it. Rather let it be named from the fishes that swim in it, the wild fowl or quadrupeds which frequent it, the wild flowers which grow by its shores, or

some wild man or child the thread of whose history is interwoven with its own; not from him who could show no title to it but the deed which a like-minded neighbor or legislature gave him, — him who thought only of its money value; whose presence perchance cursed all the shores; who exhausted the land around it, and would fain have exhausted the waters within it; who regretted only that it was not English hay or cranberry meadow, — there was nothing to redeem it, forsooth, in his eyes, — and would have drained and sold it for the mud at its bottom. It did not turn his mill, and it was no *privilege* to him to behold it. I respect not his labors, his farm where everything has its price, who would carry the landscape, who would carry his God, to market, if he could get anything for him; who goes to market *for* his god as it is; on whose farm nothing grows free, whose fields bear no crops, whose meadows no flowers, whose trees no fruits, but dollars; who loves not the beauty of his fruits, whose fruits are not ripe for him till they are turned to dollars. Give me the poverty that enjoys true wealth. Farmers are respectable and interesting to me in proportion as they are poor, — poor farmers. A model farm! where the house stands like a fungus in a muck-heap, chambers for men, horses, oxen, and swine, cleansed and uncleansed, all contiguous to one another! Stocked with men! A great grease-spot, redolent of manures and buttermilk! Under a high state of cultivation, being manured with the hearts and brains of men! As if you were to raise your potatoes in the churchyard! Such is a model farm.

No, no; if the fairest features of the landscape are to

be named after men, let them be the noblest and worthiest men alone. Let our lakes receive as true names at least as the Icarian Sea, where "still the shore" a "brave attempt resounds."

Goose Pond, of small extent, is on my way to Flint's; Fair Haven, an expansion of Concord River, said to contain some seventy acres, is a mile southwest; and White Pond, of about forty acres, is a mile and a half beyond Fair Haven. This is my lake country. These, with Concord River, are my water privileges; and night and day, year in year out, they grind such grist as I carry to them.

Since the wood-cutters, and the railroad, and I myself have profaned Walden, perhaps the most attractive, if not the most beautiful, of all our lakes, the gem of the woods, is White Pond; — a poor name from its commonness, whether derived from the remarkable purity of its waters or the color of its sands. In these as in other respects, however, it is a lesser twin of Walden. They are so much alike that you would say they must be connected under ground. It has the same stony shore, and its waters are of the same hue. As at Walden, in sultry dog-day weather, looking down through the woods on some of its bays which are not so deep but that the reflection from the bottom tinges them, its waters are of a misty bluish-green or glaucous color. Many years since I used to go there to collect the sand by cartloads, to make sandpaper with, and I have continued to visit it ever since. One who frequents it proposes to call it Virid Lake. Perhaps it might be called Yellow Pine Lake, from the following circumstance. About fifteen years

ago you could see the top of a pitch pine, of the kind called yellow pine hereabouts, though it is not a distinct species, projecting above the surface in deep water, many rods from the shore. It was even supposed by some that the pond had sunk, and this was one of the primitive forest that formerly stood there. I find that even so long ago as 1792, in a "Topographical Description of the Town of Concord," by one of its citizens, in the Collections of the Massachusetts Historical Society, the author, after speaking of Walden and White Ponds, adds, "In the middle of the latter may be seen, when the water is very low, a tree which appears as if it grew in the place where it now stands, although the roots are fifty feet below the surface of the water; the top of this tree is broken off, and at that place measures fourteen inches in diameter." In the spring of '49 I talked with the man who lives nearest the pond in Sudbury, who told me that it was he who got out this tree ten or fifteen years before. As near as he could remember, it stood twelve or fifteen rods from the shore, where the water was thirty or forty feet deep. It was in the winter, and he had been getting out ice in the forenoon, and had resolved that in the afternoon, with the aid of his neighbors, he would take out the old yellow pine. He sawed a channel in the ice toward the shore, and hauled it over and along and out on to the ice with oxen; but, before he had gone far in his work, he was surprised to find that it was wrong end upward, with the stumps of the branches pointing down, and the small end firmly fastened in the sandy bottom. It was about a foot in diameter at the big end, and he had expected to get a good saw-log, but

it was so rotten as to be fit only for fuel, if for that. He had some of it in his shed then. There were marks of an axe and of woodpeckers on the butt. He thought that it might have been a dead tree on the shore, but was finally blown over into the pond, and after the top had become water-logged, while the butt-end was still dry and light, had drifted out and sunk wrong end up. His father, eighty years old, could not remember when it was not there. Several pretty large logs may still be seen lying on the bottom, where, owing to the undulation of the surface, they look like huge water snakes in motion.

This pond has rarely been profaned by a boat, for there is little in it to tempt a fisherman. Instead of the white lily, which requires mud, or the common sweet flag, the blue flag (*Iris versicolor*) grows thinly in the pure water, rising from the stony bottom all around the shore, where it is visited by hummingbirds in June; and the color both of its bluish blades and its flowers and especially their reflections, is in singular harmony with the glaucous water.

White Pond and Walden are great crystals on the surface of the earth, Lakes of Light. If they were permanently congealed, and small enough to be clutched, they would, perchance, be carried off by slaves, like precious stones, to adorn the heads of emperors; but being liquid, and ample, and secured to us and our successors forever, we disregard them, and run after the diamond of Kohinoor. They are too pure to have a market value; they contain no muck. How much more beautiful than our lives, how much more transparent than our characters, are they! We never learned meanness of them. How

much fairer than the pool before the farmer's door, in which his ducks swim! Hither the clean wild ducks come. Nature has no human inhabitant who appreciates her. The birds with their plumage and their notes are in harmony with the flowers, but what youth or maiden conspires with the wild luxuriant beauty of Nature? She flourishes most alone, far from the towns where they reside. Talk of heaven! ye disgrace earth.

BAKER FARM

SOMETIMES I rambled to pine groves, standing like temples, or like fleets at sea, full-rigged, with wavy boughs, and rippling with light, so soft and green and shady that the Druids would have forsaken their oaks to worship in them; or to the cedar wood beyond Flint's Pond, where the trees, covered with hoary blue berries, spiring higher and higher, are fit to stand before Valhalla, and the creeping juniper covers the ground with wreaths full of fruit; or to swamps where the usnea lichen hangs in festoons from the white spruce trees, and toadstools, round tables of the swamp gods, cover the ground, and more beautiful fungi adorn the stumps, like butterflies or shells, vegetable winkles; where the swamp-pink and dogwood grow, the red alder berry glows like eyes of imps, the waxwork grooves and crushes the hardest woods in its folds, and the wild holly berries make the beholder forget his home with their beauty, and he is dazzled and tempted by nameless other wild forbidden fruits, too fair for mortal taste. Instead of calling on some scholar, I paid many a visit to particular trees, of kinds which are rare in this neighborhood, standing far away in the middle of some pasture, or in the depths of a wood or swamp, or on a hilltop; such as the black birch, of which we have some handsome specimens two

feet in diameter; its cousin, the yellow birch, with its loose golden vest, perfumed like the first; the beech, which has so neat a bole and beautifully lichen-painted, perfect in all its details, of which, excepting scattered specimens, I know but one small grove of sizable trees left in the township, supposed by some to have been planted by the pigeons that were once baited with beech-nuts near by; it is worth the while to see the silver grain sparkle when you split this wood; the bass; the horn-beam; the *Celtis occidentalis*, or false elm, of which we have but one well-grown; some taller mast of a pine, a shingle tree, or a more perfect hemlock than usual, standing like a pagoda in the midst of the woods; and many others I could mention. These were the shrines I visited both summer and winter.

Once it chanced that I stood in the very abutment of a rainbow's arch, which filled the lower stratum of the atmosphere, tinging the grass and leaves around, and dazzling me as if I looked through colored crystal. It was a lake of rainbow light, in which, for a short while, I lived like a dolphin. If it had lasted longer it might have tinged my employments and life. As I walked on the railroad causeway, I used to wonder at the halo of light around my shadow, and would fain fancy myself one of the elect. One who visited me declared that the shadows of some Irishmen before him had no halo about them, that it was only natives that were so distinguished. Benvenuto Cellini tells us in his memoirs, that, after a certain terrible dream or vision which he had during his confinement in the castle of St. Angelo a resplendent light appeared over the shadow of his head at morning

and evening, whether he was in Italy or France, and it was particularly conspicuous when the grass was moist with dew. This was probably the same phenomenon to which I have referred, which is especially observed in the morning, but also at other times, and even by moonlight. Though a constant one, it is not commonly noticed, and, in the case of an excitable imagination like Cellini's, it would be basis enough for superstition. Beside, he tells us that he showed it to very few. But are they not indeed distinguished who are conscious that they are regarded at all?

I set out one afternoon to go a-fishing to Fair Haven, through the woods, to eke out my scanty fare of vegetables. My way led through Pleasant Meadow, an adjunct of the Baker Farm, that retreat of which a poet has since sung, beginning, —

“Thy entry is a pleasant field,
Which some mossy fruit trees yield
Partly to a ruddy brook,
By gliding musquash undertook,
And mercurial trout,
Darting about.”

I thought of living there before I went to Walden. I “hooked” the apples, leaped the brook, and scared the musquash and the trout. It was one of those afternoons which seem indefinitely long before one, in which many events may happen, a large portion of our natural life, though it was already half spent when I started. By the way there came up a shower, which compelled me to stand half an hour under a pine, piling boughs over my

head, and wearing my handkerchief for a shed; and when at length I had made one cast over the pickerel-weed, standing up to my middle in water, I found myself suddenly in the shadow of a cloud, and the thunder began to rumble with such emphasis that I could do no more than listen to it. 'The gods must be proud, thought I, with such forked flashes to rout a poor unarmed fisherman. So I made haste for shelter to the nearest hut, which stood half a mile from any road, but so much the nearer to the pond, and had long been uninhabited: —

“And here a poet builded,
In the completed years,
For behold a trivial cabin
That to destruction steers.”

So the Muse fables. But therein, as I found, dwelt now John Field, an Irishman, and his wife, and several children, from the broad-faced boy who assisted his father at his work, and now came running by his side from the bog to escape the rain, to the wrinkled, sibyl-like, cone-headed infant that sat upon its father's knee as in the palaces of nobles, and looked out from its home in the midst of wet and hunger inquisitively upon the stranger, with the privilege of infancy, not knowing but it was the last of a noble line, and the hope and cynosure of the world, instead of John Field's poor starveling brat. There we sat together under that part of the roof which leaked the least, while it showered and thundered without. I had sat there many times of old before the ship was built that floated this family to America. An honest, hard-working, but shiftless man plainly was John Field; and his wife, she too was brave to cook so many

successive dinners in the recesses of that lofty stove; with round greasy face and bare breast, still thinking to improve her condition one day; with the never absent mop in one hand, and yet no effects of it visible anywhere. The chickens, which had also taken shelter here from the rain, stalked about the room like members of the family, too humanized, methought, to roast well. They stood and looked in my eye or pecked at my shoe significantly. Meanwhile my host told me his story, how hard he worked "bogging" for a neighboring farmer, turning up a meadow with a spade or bog hoe at the rate of ten dollars an acre and the use of the land with manure for one year, and his little broad-faced son worked cheerfully at his father's side the while, not knowing how poor a bargain the latter had made. I tried to help him with my experience, telling him that he was one of my nearest neighbors, and that I too, who came a-fishing here, and looked like a loafer, was getting my living like himself; that I lived in a tight, light, and clean house, which hardly cost more than the annual rent of such a ruin as his commonly amounts to; and how, if he chose, he might in a month or two build himself a palace of his own; that I did not use tea, nor coffee, nor butter, nor milk, nor fresh meat, and so did not have to work to get them; again, as I did not work hard, I did not have to eat hard, and it cost me but a trifle for my food; but as he began with tea, and coffee, and butter, and milk, and beef, he had to work hard to pay for them, and when he had worked hard he had to eat hard again to repair the waste of his system, — and so it was as broad as it was long, indeed it was broader than it was long, for he was

discontented and wasted his life into the bargain; and yet he had rated it as a gain in coming to America, that here you could get tea, and coffee, and meat every day. But the only true America is that country where you are at liberty to pursue such a mode of life as may enable you to do without these, and where the state does not endeavor to compel you to sustain the slavery and war and other superfluous expenses which directly or indirectly result from the use of such things. For I purposely talked to him as if he were a philosopher, or desired to be one. I should be glad if all the meadows on the earth were left in a wild state, if that were the consequence of men's beginning to redeem themselves. A man will not need to study history to find out what is best for his own culture. But alas! the culture of an Irishman is an enterprise to be undertaken with a sort of moral bog hoe. I told him, that as he worked so hard at bogging, he required thick boots and stout clothing, which yet were soon soiled and worn out, but I wore light shoes and thin clothing, which cost not half so much, though he might think that I was dressed like a gentleman (which, however, was not the case), and in an hour or two, without labor, but as a recreation, I could, if I wished, catch as many fish as I should want for two days, or earn enough money to support me a week. If he and his family would live simply, they might all go a-huckleberrying in the summer for their amusement. John heaved a sigh at this, and his wife stared with arms a-kimbo, and both appeared to be wondering if they had capital enough to begin such a course with, or arithmetic enough to carry it through. It was sailing

by dead reckoning to them, and they saw not clearly how to make their port so; therefore I suppose they still take life bravely, after their fashion, face to face, giving it tooth and nail, not having skill to split its massive columns with any fine entering wedge, and rout it in detail; — thinking to deal with it roughly, as one should handle a thistle. But they fight at an overwhelming disadvantage, — living, John Field, alas! without arithmetic, and failing so.

“Do you ever fish?” I asked. “Oh yes, I catch a mess now and then when I am lying by; good perch I catch.” “What’s your bait?” “I catch shiners with fishworms, and bait the perch with them.” “You’d better go now, John,” said his wife, with glistening and hopeful face; but John demurred.

The shower was now over, and a rainbow above the eastern woods promised a fair evening; so I took my departure. When I had got without I asked for a drink, hoping to get a sight of the well bottom, to complete my survey of the premises; but there, alas! are shallows and quicksands, and rope broken withal, and bucket irrecoverable. Meanwhile the right culinary vessel was selected, water was seemingly distilled, and after consultation and long delay passed out to the thirsty one, — not yet suffered to cool, not yet to settle. Such gruel sustains life here, I thought; so, shutting my eyes, and excluding the motes by a skilfully directed undercurrent, I drank to genuine hospitality the heartiest draught I could. I am not squeamish in such cases when manners are concerned.

As I was leaving the Irishman’s roof after the rain,

bending my steps again to the pond, my haste to catch pickerel, wading in retired meadows, in sloughs and bog-holes, in forlorn and savage places, appeared for an instant trivial to me who had been sent to school and college; but as I ran down the hill toward the reddening west, with the rainbow over my shoulder, and some faint tinkling sounds borne to my ear through the cleansed air, from I know not what quarter, my Good Genius seemed to say, — Go fish and hunt far and wide day by day, — farther and wider, — and rest thee by many brooks and hearth-sides without misgiving. Remember thy Creator in the days of thy youth. Rise free from care before the dawn, and seek adventures. Let the noon find thee by other lakes, and the night overtake thee everywhere at home. There are no larger fields than these, no worthier games than may here be played. Grow wild according to thy nature, like these sedges and brakes, which will never become English hay. Let the thunder rumble; what if it threaten ruin to farmers' crops? that is not its errand to thee. Take shelter under the cloud, while they flee to carts and sheds. Let not to get a living be thy trade, but thy sport. Enjoy the land, but own it not. Through want of enterprise and faith men are where they are, buying and selling, and spending their lives like serfs.

O Baker Farm!

“Landscape where the richest element
Is a little sunshine innocent.” . . .

“No one runs to revel
On thy rail-fenced lea.” . . .

“Debate with no man hast thou,
With questions art never perplexed,
As tame at the first sight as now,
In thy plain russet gabardine dressed.” . . .

“Come ye who love,
And ye who hate,
Children of the Holy Dove,
And Guy Faux of the state,
And hang conspiracies
From the tough rafters of the trees!”

Men come tamely home at night only from the next field or street, where their household echoes haunt, and their life pines because it breathes its own breath over again; their shadows, morning and evening, reach farther than their daily steps. We should come home from far, from adventures, and perils, and discoveries every day, with new experience and character.

Before I had reached the pond some fresh impulse had brought out John Field, with altered mind, letting go “boggling” ere this sunset. But he, poor man, disturbed only a couple of fins while I was catching a fair string, and he said it was his luck; but when we changed seats in the boat luck changed seats too. Poor John Field! — I trust he does not read this, unless he will improve by it, — thinking to live by some derivative old-country mode in this primitive new country, — to catch perch with shiners. It is good bait sometimes, I allow. With his horizon all his own, yet he a poor man, born to be poor, with his inherited Irish poverty or poor life, his Adam’s grandmother and boggy ways, not to rise in this world, he nor his posterity, till their wading webbed bog-trotting feet get *talaria* to their heels.

XI

HIGHER LAWS

As I came home through the woods with my string of fish, trailing my pole, it being now quite dark, I caught a glimpse of a woodchuck stealing across my path, and felt a strange thrill of savage delight, and was strongly tempted to seize and devour him raw; not that I was hungry then, except for that wildness which he represented. Once or twice, however, while I lived at the pond, I found myself ranging the woods, like a half-starved hound, with a strange abandonment, seeking some kind of venison which I might devour, and no morsel could have been too savage for me. The wildest scenes had become unaccountably familiar. I found in myself, and still find, an instinct toward a higher, or, as it is named, spiritual life, as do most men, and another toward a primitive rank and savage one, and I reverence them both. I love the wild not less than the good. The wildness and adventure that are in fishing still recommended it to me. I like sometimes to take rank hold on life and spend my day more as the animals do. Perhaps I have owed to this employment and to hunting, when quite young, my closest acquaintance with Nature. They early introduce us to and detain us in scenery with which otherwise, at that age, we should have little acquaintance. Fishermen, hunters, wood-

choppers, and others, spending their lives in the fields and woods, in a peculiar sense a part of Nature themselves, are often in a more favorable mood for observing her, in the intervals of their pursuits, than philosophers or poets even, who approach her with expectation. She is not afraid to exhibit herself to them. The traveller on the prairie is naturally a hunter, on the head waters of the Missouri and Columbia a trapper, and at the Falls of St. Mary a fisherman. He who is only a traveller learns things at second-hand and by the halves, and is poor authority. We are most interested when science reports what those men already know practically or instinctively, for that alone is a true *humanity*, or account of human experience.

They mistake who assert that the Yankee has few amusements, because he has not so many public holidays, and men and boys do not play so many games as they do in England, for here the more primitive but solitary amusements of hunting, fishing, and the like have not yet given place to the former. Almost every New England boy among my contemporaries shouldered a fowling-piece between the ages of ten and fourteen; and his hunting and fishing grounds were not limited, like the preserves of an English nobleman, but were more boundless even than those of a savage. No wonder, then, that he did not oftener stay to play on the common. But already a change is taking place, owing, not to an increased humanity, but to an increased scarcity of game, for perhaps the hunter is the greatest friend of the animals hunted, not excepting the Humane Society.

Moreover, when at the pond, I wished sometimes to add fish to my fare for variety. I have actually fished from the same kind of necessity that the first fishers did. Whatever humanity I might conjure up against it was all factitious, and concerned my philosophy more than my feelings. I speak of fishing only now, for I had long felt differently about fowling, and sold my gun before I went to the woods. Not that I am less humane than others, but I did not perceive that my feelings were much affected. I did not pity the fishes nor the worms. This was habit. As for fowling, during the last years that I carried a gun my excuse was that I was studying ornithology, and sought only new or rare birds. But I confess that I am now inclined to think that there is a finer way of studying ornithology than this. It requires so much closer attention to the habits of the birds, that, if for that reason only, I have been willing to omit the gun. Yet notwithstanding the objection on the score of humanity, I am compelled to doubt if equally valuable sports are ever substituted for these; and when some of my friends have asked me anxiously about their boys, whether they should let them hunt, I have answered, yes, — remembering that it was one of the best parts of my education, — *make* them hunters, though sportsmen only at first, if possible, mighty hunters at last, so that they shall not find game large enough for them in this or any vegetable wilderness, — hunters as well as fishers of men. Thus far I am of the opinion of Chaucer's nun, who

“yave not of the text a pulled hen
That saith that hunters ben not holy men.”

There is a period in the history of the individual, as of the race, when the hunters are the "best men," as the Algonquins called them. We cannot but pity the boy who has never fired a gun; he is no more humane, while his education has been sadly neglected. This was my answer with respect to those youths who were bent on this pursuit, trusting that they would soon outgrow it. No humane being, past the thoughtless age of boyhood, will wantonly murder any creature which holds its life by the same tenure that he does. The hare in its extremity cries like a child. I warn you, mothers, that my sympathies do not always make the usual *philanthropic* distinctions.

Such is oftenest the young man's introduction to the forest, and the most original part of himself. He goes thither at first as a hunter and fisher, until at last, if he has the seeds of a better life in him, he distinguishes his proper objects, as a poet or naturalist it may be, and leaves the gun and fish-pole behind. The mass of men are still and always young in this respect. In some countries a hunting parson is no uncommon sight. Such a one might make a good shepherd's dog, but is far from being the Good Shepherd. I have been surprised to consider that the only obvious employment, except wood-chopping, ice-cutting, or the like business, which ever to my knowledge detained at Walden Pond for a whole half-day any of my fellow-citizens, whether fathers or children of the town, with just one exception, was fishing. Commonly they did not think that they were lucky, or well paid for their time, unless they got a long string of fish, though they had the opportunity

of seeing the pond all the while. They might go there a thousand times before the sediment of fishing would sink to the bottom and leave their purpose pure; but no doubt such a clarifying process would be going on all the while. The Governor and his Council faintly remember the pond, for they went a-fishing there when they were boys; but now they are too old and dignified to go a-fishing, and so they know it no more forever. Yet even they expect to go to heaven at last. If the legislature regards it, it is chiefly to regulate the number of hooks to be used there; but they know nothing about the hook of hooks with which to angle for the pond itself, impaling the legislature for a bait. Thus, even in civilized communities, the embryo man passes through the hunter stage of development.

I have found repeatedly, of late years, that I cannot fish without falling a little in self-respect. I have tried it again and again. I have skill at it, and, like many of my fellows, a certain instinct for it, which revives from time to time, but always when I have done I feel that it would have been better if I had not fished. I think that I do not mistake. It is a faint intimation, yet so are the first streaks of morning. There is unquestionably this instinct in me which belongs to the lower orders of creation; yet with every year I am less a fisherman, though without more humanity or even wisdom; at present I am no fisherman at all. But I see that if I were to live in a wilderness I should again be tempted to become a fisher and hunter in earnest. Beside, there is something essentially unclean about this diet and all flesh, and I began to see where house-

work commences, and whence the endeavor, which costs so much, to wear a tidy and respectable appearance each day, to keep the house sweet and free from all ill odors and sights. Having been my own butcher and scullion and cook, as well as the gentleman for whom the dishes were served up, I can speak from an unusually complete experience. The practical objection to animal food in my case was its uncleanness; and besides; when I had caught and cleaned and cooked and eaten my fish, they seemed not to have fed me essentially. It was insignificant and unnecessary, and cost more than it came to. A little bread or a few potatoes would have done as well, with less trouble and filth. Like many of my contemporaries, I had rarely for many years used animal food, or tea, or coffee, etc.; not so much because of any ill effects which I had traced to them, as because they were not agreeable to my imagination. The repugnance to animal food is not the effect of experience, but is an instinct. It appeared more beautiful to live low and fare hard in many respects; and though I never did so, I went far enough to please my imagination. I believe that every man who has ever been earnest to preserve his higher or poetic faculties in the best condition has been particularly inclined to abstain from animal food, and from much food of any kind. It is a significant fact, stated by entomologists, — I find it in Kirby and Spence, — that “some insects in their perfect state, though furnished with organs of feeding, make no use of them;” and they lay it down as “a general rule, that almost all insects in this state eat much less than in that of larvæ. The voracious caterpillar when

transformed into a butterfly . . . and the gluttonous maggot when become a fly " content themselves with a drop or two of honey or some other sweet liquid. The abdomen under the wings of the butterfly still represents the larva. This is the tidbit which tempts his insectivorous fate. The gross feeder is a man in the larva state; and there are whole nations in that condition, nations without fancy or imagination, whose vast abdomens betray them.

It is hard to provide and cook so simple and clean a diet as will not offend the imagination; but this, I think, is to be fed when we feed the body; they should both sit down at the same table. Yet perhaps this may be done. The fruits eaten temperately need not make us ashamed of our appetites, nor interrupt the worthiest pursuits. But put an extra condiment into your dish, and it will poison you. It is not worth the while to live by rich cookery. Most men would feel shame if caught preparing with their own hands precisely such a dinner, whether of animal or vegetable food, as is every day prepared for them by others. Yet till this is otherwise we are not civilized, and, if gentlemen and ladies, are not true men and women. This certainly suggests what change is to be made. It may be vain to ask why the imagination will not be reconciled to flesh and fat. I am satisfied that it is not. Is it not a reproach that man is a carnivorous animal? True, he can and does live, in a great measure, by preying on other animals; but this is a miserable way, — as any one who will go to snaring rabbits, or slaughtering lambs, may learn, — and he will be regarded as a benefactor of his race who

shall teach man to confine himself to a more innocent and wholesome diet. Whatever my own practice may be, I have no doubt that it is a part of the destiny of the human race, in its gradual improvement, to leave off eating animals, as surely as the savage tribes have left off eating each other when they came in contact with the more civilized.

If one listens to the faintest but constant suggestions of his genius, which are certainly true, he sees not to what extremes, or even insanity, it may lead him; and yet that way, as he grows more resolute and faithful, his road lies. The faintest assured objection which one healthy man feels will at length prevail over the arguments and customs of mankind. No man ever followed his genius till it misled him. Though the result were bodily weakness, yet perhaps no one can say that the consequences were to be regretted, for these were a life in conformity to higher principles. If the day and the night are such that you greet them with joy, and life emits a fragrance like flowers and sweet-scented herbs, is more elastic, more starry, more immortal,—that is your success. All nature is your congratulation, and you have cause momentarily to bless yourself. The greatest gains and values are farthest from being appreciated. We easily come to doubt if they exist. We soon forget them. They are the highest reality. Perhaps the facts most astounding and most real are never communicated by man to man. The true harvest of my daily life is somewhat as intangible and indescribable as the tints of morning or evening. It is a little star-dust caught, a segment of the rainbow which I have clutched.

Yet, for my part, I was never unusually squeamish; I could sometimes eat a fried rat with a good relish, if it were necessary. I am glad to have drunk water so long, for the same reason that I prefer the natural sky to an opium-eater's heaven. I would fain keep sober always; and there are infinite degrees of drunkenness. I believe that water is the only drink for a wise man; wine is not so noble a liquor; and think of dashing the hopes of a morning with a cup of warm coffee, or of an evening with a dish of tea! Ah, how low I fall when I am tempted by them! Even music may be intoxicating. Such apparently slight causes destroyed Greece and Rome, and will destroy England and America. Of all ebriosity, who does not prefer to be intoxicated by the air he breathes? I have found it to be the most serious objection to coarse labors long continued, that they compelled me to eat and drink coarsely also. But to tell the truth, I find myself at present somewhat less particular in these respects. I carry less religion to the table, ask no blessing; not because I am wiser than I was, but, I am obliged to confess, because, however much it is to be regretted, with years I have grown more coarse and indifferent. Perhaps these questions are entertained only in youth, as most believe of poetry. My practice is "nowhere," my opinion is here. Nevertheless I am far from regarding myself as one of those privileged ones to whom the Ved refers when it says, that "he who has true faith in the Omnipresent Supreme Being may eat all that exists," that is, is not bound to inquire what is his food, or who prepares it; and even in their case it is to be observed, as a Hindoo commen-

tator has remarked, that the Vedant limits this privilege to "the time of distress."

Who has not sometimes derived an inexpressible satisfaction from his food in which appetite had no share? I have been thrilled to think that I owed a mental perception to the commonly gross sense of taste, that I have been inspired through the palate, that some berries which I had eaten on a hillside had fed my genius. "The soul not being mistress of herself," says Thseng-tseu, "one looks, and one does not see; one listens, and one does not hear; one eats, and one does not know the savor of food." He who distinguishes the true savor of his food can never be a glutton; he who does not cannot be otherwise. A puritan may go to his brown-bread crust with as gross an appetite as ever an alderman to his turtle. Not that food which entereth into the mouth defileth a man, but the appetite with which it is eaten. It is neither the quality nor the quantity, but the devotion to sensual savors; when that which is eaten is not a viand to sustain our animal, or inspire our spiritual life, but food for the worms that possess us. If the hunter has a taste for mud-turtles, muskrats, and other such savage tidbits, the fine lady indulges a taste for jelly made of a calf's foot, or for sardines from over the sea, and they are even. He goes to the mill-pond, she to her preserve-pot. The wonder is how they, how you and I, can live this slimy, beastly life, eating and drinking.

Our whole life is startlingly moral. There is never an instant's truce between virtue and vice. Goodness is the only investment that never fails. In the music

of the harp which trembles round the world it is the insistent on this which thrills us. The harp is the travelling patterer for the Universe's Insurance Company, recommending its laws, and our little goodness is all the assessment that we pay. Though the youth at last grows indifferent, the laws of the universe are not indifferent, but are forever on the side of the most sensitive. Listen to every zephyr for some reproof, for it is surely there, and he is unfortunate who does not hear it. We cannot touch a string or move a stop but the charming moral transfixes us. Many an irksome noise, go a long way off, is heard as music, a proud, sweet satire on the meanness of our lives.

We are conscious of an animal in us, which awakens in proportion as our higher nature slumbers. It is reptile and sensual, and perhaps cannot be wholly expelled; like the worms which, even in life and health, occupy our bodies. Possibly we may withdraw from it, but never change its nature. I fear that it may enjoy a certain health of its own; that we may be well, yet not pure. The other day I picked up the lower jaw of a hog, with white and sound teeth and tusks, which suggested that there was an animal health and vigor distinct from the spiritual. This creature succeeded by other means than temperance and purity. "That in which men differ from brute beasts," says Mencius, "is a thing very inconsiderable; the common herd lose it very soon; superior men preserve it carefully." Who knows what sort of life would result if we had attained to purity? If I knew so wise a man as could teach me purity I would go to seek him forthwith. "A command over our

passions, and over the external senses of the body, and good acts, are declared by the Ved to be indispensable in the mind's approximation to God." Yet the spirit can for the time pervade and control every member and function of the body, and transmute what in form is the grossest sensuality into purity and devotion. The generative energy, which, when we are loose, dissipates and makes us unclean, when we are continent invigorates and inspires us. Chastity is the flowering of man; and what are called Genius, Heroism, Holiness, and the like, are but various fruits which succeed it. Man flows at once to God when the channel of purity is open. By turns our purity inspires and our impurity casts us down. He is blessed who is assured that the animal is dying out in him day by day, and the divine being established. Perhaps there is none but has cause for shame on account of the inferior and brutish nature to which he is allied. I fear that we are such gods or demigods only as fauns and satyrs, the divine allied to beasts, the creatures of appetite, and that, to some extent, our very life is our disgrace. —

"How happy 's he who hath due place assigned
 To his beasts and disafforested his mind!

 Can use his horse, goat, wolf, and ev'ry beast,
 And is not ass himself to all the rest!
 Else man not only is the herd of swine,
 But he 's those devils too which did incline
 Them to a headlong rage, and made them worse."

All sensuality is one, though it takes many forms; all purity is one. It is the same whether a man eat, or drink, or cohabit, or sleep sensually. They are but one

appetite, and we only need to see a person do any one of these things to know how great a sensualist he is. The impure can neither stand nor sit with purity. When the reptile is attacked at one mouth of his burrow, he shows himself at another. If you would be chaste, you must be temperate. What is chastity? How shall a man know if he is chaste? He shall not know it. We have heard of this virtue, but we know not what it is. We speak conformably to the rumor which we have heard. From exertion come wisdom and purity; from sloth ignorance and sensuality. In the student sensuality is a sluggish habit of mind. An unclean person is universally a slothful one, one who sits by a stove, whom the sun shines on prostrate, who reposes without being fatigued. If you would avoid uncleanness, and all the sins, work earnestly, though it be at cleaning a stable. Nature is hard to be overcome, but she must be overcome. What avails it that you are Christian, if you are not purer than the heathen, if you deny yourself no more, if you are not more religious? I know of many systems of religion esteemed heathenish whose precepts fill the reader with shame, and provoke him to new endeavors, though it be to the performance of rites merely.

I hesitate to say these things, but it is not because of the subject, — I care not how obscene my *words* are, — but because I cannot speak of them without betraying my impurity. We discourse freely without shame of one form of sensuality, and are silent about another. We are so degraded that we cannot speak simply of the necessary functions of human nature. In earlier ages,

in some countries, every function was reverently spoken of and regulated by law. Nothing was too trivial for the Hindoo lawgiver, however offensive it may be to modern taste. He teaches how to eat, drink, cohabit, void excrement and urine, and the like, elevating what is mean, and does not falsely excuse himself by calling these things trifles.

Every man is the builder of a temple, called his body, to the god he worships, after a style purely his own, nor can he get off by hammering marble instead. We are all sculptors and painters, and our material is our own flesh and blood and bones. Any nobleness begins at once to refine a man's features, any meanness or sensuality to imbrute them.

John Farmer sat at his door one September evening, after a hard day's work, his mind still running on his labor more or less. Having bathed, he sat down to re-create his intellectual man. It was a rather cool evening, and some of his neighbors were apprehending a frost. He had not attended to the train of his thoughts long when he heard some one playing on a flute, and that sound harmonized with his mood. Still he thought of his work; but the burden of his thought was, that though this kept running in his head, and he found himself planning and contriving it against his will, yet it concerned him very little. It was no more than the scurf of his skin, which was constantly shuffled off. But the notes of the flute came home to his ears out of a different sphere from that he worked in, and suggested work for certain faculties which slumbered in him. They gently did away with the street, and the village, and the

state in which he lived. A voice said to him, — Why do you stay here and live this mean moiling life, when a glorious existence is possible for you? Those same stars twinkle over other fields than these. — But how to come out of this condition and actually migrate thither? All that he could think of was to practise some new austerity, to let his mind descend into his body and redeem it, and treat himself with ever increasing respect.

XII

BRUTE NEIGHBORS

SOMETIMES I had a companion in my fishing, who came through the village to my house from the other side of the town, and the catching of the dinner was as much a social exercise as the eating of it.

Hermit. I wonder what the world is doing now. I have not heard so much as a locust over the sweet-fern these three hours. The pigeons are all asleep upon their roosts, — no flutter from them. Was that a farmer's noon horn which sounded from beyond the woods just now? The hands are coming in to boiled salt beef and cider and Indian bread. Why will men worry themselves so? He that does not eat need not work. I wonder how much they have reaped. Who would live there where a body can never think for the barking of Bose? And oh, the housekeeping! to keep bright the devil's door-knobs, and scour his tubs this bright day! Better not keep a house. Say, some hollow tree; and then for morning calls and dinner-parties! Only a woodpecker tapping. Oh, they swarm; the sun is too warm there; they are born too far into life for me. I have water from the spring, and a loaf of brown bread on the shelf. — Hark! I hear a rustling of the leaves. Is it some ill-fed village hound yielding to the instinct of the chase? or the lost pig which is said to be in these woods, whose

tracks I saw after the rain? It comes on apace; my sumachs and sweetbriers tremble. — Eh, Mr. Poet, is it you? How do you like the world to-day?

Poet. See those clouds; how they hang! That's the greatest thing I have seen to-day. There's nothing like it in old paintings, nothing like it in foreign lands, — unless when we were off the coast of Spain. That's a true Mediterranean sky. I thought, as I have my living to get, and have not eaten to-day, that I might go a-fishing. That's the true industry for poets. It is the only trade I have learned. Come, let's along.

Hermit. I cannot resist. My brown bread will soon be gone. I will go with you gladly soon, but I am just concluding a serious meditation. I think that I am near the end of it. Leave me alone, then, for a while. But that we may not be delayed, you shall be digging the bait meanwhile. Angeworms are rarely to be met with in these parts, where the soil was never fattened with manure; the race is nearly extinct. The sport of digging the bait is nearly equal to that of catching the fish, when one's appetite is not too keen; and this you may have all to yourself to-day. I would advise you to set in the spade down yonder among the ground-nuts, where you see the johnswort waving. I think that I may warrant you one worm to every three sods you turn up, if you look well in among the roots of the grass, as if you were weeding. Or, if you choose to go farther, it will not be unwise, for I have found the increase of fair bait to be very nearly as the squares of the distances.

Hermit alone. Let me see; where was I? Methinks I was nearly in this frame of mind; the world lay about

at this angle. Shall I go to heaven or a-fishing? If I should soon bring this meditation to an end, would another so sweet occasion be likely to offer? I was as near being resolved into the essence of things as ever I was in my life. I fear my thoughts will not come back to me. If it would do any good, I would whistle for them. When they make us an offer, is it wise to say, We will think of it? My thoughts have left no track, and I cannot find the path again. What was it that I was thinking of? It was a very hazy day. I will just try these three sentences of Confut-see; they may fetch that state about again. I know not whether it was the dumps or a budding ecstasy. Mem. There never is but one opportunity of a kind.

Poet. How now, Hermit, is it too soon? I have got just thirteen whole ones, beside several which are imperfect or undersized; but they will do for the smaller fry; they do not cover up the hook so much. Those village worms are quite too large; a shiner may make a meal off one without finding the skewer.

Hermit. Well, then, let's be off. Shall we to the Concord? There's good sport there if the water be not too high.

Why do precisely these objects which we behold make a world? Why has man just these species of animals for his neighbors; as if nothing but a mouse could have filled this crevice? I suspect that Pilpay & Co. have put animals to their best use, for they are all beasts of burden, in a sense, made to carry some portion of our thoughts.

The mice which haunted my house were not the common ones, which are said to have been introduced into the country, but a wild native kind not found in the village. I sent one to a distinguished naturalist, and it interested him much. When I was building, one of these had its nest underneath the house, and before I had laid the second floor, and swept out the shavings, would come out regularly at lunch time and pick up the crumbs at my feet. It probably had never seen a man before; and it soon became quite familiar, and would run over my shoes and up my clothes. It could readily ascend the sides of the room by short impulses, like a squirrel, which it resembled in its motions. At length, as I leaned with my elbow on the bench one day, it ran up my clothes, and along my sleeve, and round and round the paper which held my dinner, while I kept the latter close, and dodged and played at bopeep with it; and when at last I held still a piece of cheese between my thumb and finger, it came and nibbled it, sitting in my hand, and afterward cleaned its face and paws, like a fly, and walked away.

A phœbe soon built in my shed, and a robin for protection in a pine which grew against the house. In June the partridge (*Tetrao umbellus*), which is so shy a bird, led her brood past my windows, from the woods in the rear to the front of my house, clucking and calling to them like a hen, and in all her behavior proving herself the hen of the woods. The young suddenly disperse on your approach, at a signal from the mother, as if a whirlwind had swept them away, and they so exactly resemble the dried leaves and twigs that many a travel-

ler has placed his foot in the midst of a brood, and heard the whir of the old bird as she flew off, and her anxious calls and mewing, or seen her trail her wings to attract his attention, without suspecting their neighborhood. The parent will sometimes roll and spin round before you in such a dishabille, that you cannot, for a few moments, detect what kind of creature it is. The young squat still and flat, often running their heads under a leaf, and mind only their mother's directions given from a distance, nor will your approach make them run again and betray themselves. You may even tread on them, or have your eyes on them for a minute, without discovering them. I have held them in my open hand at such a time, and still their only care, obedient to their mother and their instinct, was to squat there without fear or trembling. So perfect is this instinct, that once, when I had laid them on the leaves again, and one accidentally fell on its side, it was found with the rest in exactly the same position ten minutes afterward. They are not callow like the young of most birds, but more perfectly developed and precocious even than chickens. The remarkably adult yet innocent expression of their open and serene eyes is very memorable. All intelligence seems reflected in them. They suggest not merely the purity of infancy, but a wisdom clarified by experience. Such an eye was not born when the bird was, but is coeval with the sky it reflects. The woods do not yield another such a gem. The traveller does not often look into such a limpid well. The ignorant or reckless sportsman often shoots the parent at such a time, and leaves these innocents to

fall a prey to some prowling beast or bird, or gradually mingle with the decaying leaves which they so much resemble. It is said that when hatched by a hen they will directly disperse on some alarm, and so are lost, for they never hear the mother's call which gathers them again. These were my hens and chickens.

It is remarkable how many creatures live wild and free though secret in the woods, and still sustain themselves in the neighborhood of towns, suspected by hunters only. How retired the otter manages to live here! He grows to be four feet long, as big as a small boy, perhaps without any human being getting a glimpse of him. I formerly saw the raccoon in the woods behind where my house is built, and probably still heard their whinnying at night. Commonly I rested an hour or two in the shade at noon, after planting, and ate my lunch, and read a little by a spring which was the source of a swamp and of a brook, oozing from under Brister's Hill, half a mile from my field. The approach to this was through a succession of descending grassy hollows, full of young pitch pines, into a larger wood about the swamp. There, in a very secluded and shaded spot, under a spreading white pine, there was yet a clean, firm sward to sit on. I had dug out the spring and made a well of clear gray water, where I could dip up a pailful without roiling it, and thither I went for this purpose almost every day in midsummer, when the pond was warmest. Thither, too, the woodcock led her brood, to probe the mud for worms, flying but a foot above them down the bank, while they ran in a troop beneath; but at last, spying me, she would leave her young and circle round and round me, nearer

and nearer till within four or five feet, pretending broken wings and legs, to attract my attention, and get off her young, who would already have taken up their march, with faint, wiry peep, single file through the swamp, as she directed. Or I heard the peep of the young when I could not see the parent bird. There too the turtle doves sat over the spring, or fluttered from bough to bough of the soft white pines over my head; or the red squirrel, coursing down the nearest bough, was particularly familiar and inquisitive. You only need sit still long enough in some attractive spot in the woods that all its inhabitants may exhibit themselves to you by turns.

I was witness to events of a less peaceful character. One day when I went out to my wood-pile, or rather my pile of stumps, I observed two large ants, the one red, the other much larger, nearly half an inch long, and black, fiercely contending with one another. Having once got hold they never let go, but struggled and wrestled and rolled on the chips incessantly. Looking farther, I was surprised to find that the chips were covered with such combatants, that it was not a *duellum*, but a *bellum*, a war between two races of ants, the red always pitted against the black, and frequently two red ones to one black. The legions of these Myrmidons covered all the hills and vales in my wood-yard, and the ground was already strewn with the dead and dying, both red and black. It was the only battle which I have ever witnessed, the only battle-field I ever trod while the battle was raging; internecine war; the red republicans on the one hand, and the black imperialists on the other. On every side they were engaged in deadly combat, yet without

any noise that I could hear, and human soldiers never fought so resolutely. I watched a couple that were fast locked in each other's embraces, in a little sunny valley amid the chips, now at noonday prepared to fight till the sun went down, or life went out. The smaller red champion had fastened himself like a vice to his adversary's front, and through all the tumblings on that field never for an instant ceased to gnaw at one of his feelers near the root, having already caused the other to go by the board; while the stronger black one dashed him from side to side, and, as I saw on looking nearer, had already divested him of several of his members. They fought with more pertinacity than bulldogs. Neither manifested the least disposition to retreat. It was evident that their battle-cry was "Conquer or die." In the meanwhile there came along a single red ant on the hillside of this valley, evidently full of excitement, who either had despatched his foe, or had not yet taken part in the battle; probably the latter, for he had lost none of his limbs; whose mother had charged him to return with his shield or upon it. Or perchance he was some Achilles, who had nourished his wrath apart, and had now come to avenge or rescue his Patroclus. He saw this unequal combat from afar, — for the blacks were nearly twice the size of the red, — he drew near with rapid pace till he stood on his guard within half an inch of the combatants; then, watching his opportunity, he sprang upon the black warrior, and commenced his operations near the root of his right fore leg, leaving the foe to select among his own members; and so there were three united for life, as if a new kind of attraction had been

invented which put all other locks and cements to shame. I should not have wondered by this time to find that they had their respective musical bands stationed on some eminent chip, and playing their national airs the while, to excite the slow and cheer the dying combatants. I was myself excited somewhat even as if they had been men. The more you think of it, the less the difference. And certainly there is not the fight recorded in Concord history, at least, if in the history of America, that will bear a moment's comparison with this, whether for the numbers engaged in it, or for the patriotism and heroism displayed. For numbers and for carnage it was an Austerlitz or Dresden. Concord Fight! Two killed on the patriots' side, and Luther Blanchard wounded! Why here every ant was a Buttrick, — "Fire! for God's sake fire!" — and thousands shared the fate of Davis and Hosmer. There was not one hireling there. I have no doubt that it was a principle they fought for, as much as our ancestors, and not to avoid a three-penny tax on their tea; and the results of this battle will be as important and memorable to those whom it concerns as those of the battle of Bunker Hill, at least.

I took up the chip on which the three I have particularly described were struggling, carried it into my house, and placed it under a tumbler on my window-sill, in order to see the issue. Holding a microscope to the first-mentioned red ant, I saw that, though he was assiduously gnawing at the near fore leg of his enemy, having severed his remaining feeler, his own breast was all torn away, exposing what vitals he had there to the jaws of the black warrior, whose breastplate was apparently

too thick for him to pierce; and the dark carbuncles of the sufferer's eyes shone with ferocity such as war only could excite. They struggled half an hour longer under the tumbler, and when I looked again the black soldier had severed the heads of his foes from their bodies, and the still living heads were hanging on either side of him like ghastly trophies at his saddle-bow, still apparently as firmly fastened as ever, and he was endeavoring with feeble struggles, being without feelers and with only the remnant of a leg, and I know not how many other wounds, to divest himself of them; which at length, after half an hour more, he accomplished. I raised the glass, and he went off over the window-sill in that crippled state. Whether he finally survived that combat, and spent the remainder of his days in some Hôtel des Invalides, I do not know; but I thought that his industry would not be worth much thereafter. I never learned which party was victorious, nor the cause of the war; but I felt for the rest of that day as if I had had my feelings excited and harrowed by witnessing the struggle, the ferocity and carnage, of a human battle before my door.

Kirby and Spence tell us that the battles of ants have long been celebrated and the date of them recorded, though they say that Huber is the only modern author who appears to have witnessed them. "Æneas Sylvius," say they, "after giving a very circumstantial account of one contested with great obstinacy by a great and small species on the trunk of a pear tree," adds that "this action was fought in the pontificate of Eugenius the Fourth, in the presence of Nicholas Pistoriensis, an eminent lawyer, who related the whole history of the

battle with the greatest fidelity.' A similar engagement between great and small ants is recorded by Olaus Magnus, in which the small ones, being victorious, are said to have buried the bodies of their own soldiers, but left those of their giant enemies a prey to the birds. This event happened previous to the expulsion of the tyrant Christiern the Second from Sweden." The battle which I witnessed took place in the Presidency of Polk, five years before the passage of Webster's Fugitive-Slave Bill.

Many a village Bose, fit only to course a mud-turtle in a victualling cellar, sported his heavy quarters in the woods, without the knowledge of his master, and ineffectually smelled at old fox burrows and woodchucks' holes; led perchance by some slight cur which nimbly threaded the wood, and might still inspire a natural terror in its denizens; — now far behind his guide, barking like a canine bull toward some small squirrel which had treed itself for scrutiny, then, cantering off, bending the bushes with his weight, imagining that he is on the track of some stray member of the jerbilla family. Once I was surprised to see a cat walking along the stony shore of the pond, for they rarely wander so far from home. The surprise was mutual. Nevertheless the most domestic cat, which has lain on a rug all her days, appears quite at home in the woods, and, by her sly and stealthy behavior, proves herself more native there than the regular inhabitants. Once, when berrying, I met with a cat with young kittens in the woods, quite wild, and they all, like their mother, had their backs up and were fiercely spitting at me. A few years before I lived in the woods there

was what was called a "winged cat" in one of the farm-houses in Lincoln nearest the pond, Mr. Gilian Baker's. When I called to see her in June, 1842, she was gone a-hunting in the woods, as was her wont (I am not sure whether it was a male or female, and so use the more common pronoun), but her mistress told me that she came into the neighborhood a little more than a year before, in April, and was finally taken into their house; that she was of a dark brownish-gray color, with a white spot on her throat, and white feet, and had a large bushy tail like a fox; that in the winter the fur grew thick and flattened out along her sides, forming strips ten or twelve inches long by two and a half wide, and under her chin like a muff, the upper side loose, the under matted like felt, and in the spring these appendages dropped off. They gave me a pair of her "wings," which I keep still. There is no appearance of a membrane about them. Some thought it was part flying squirrel or some other wild animal, which is not impossible, for, according to naturalists, prolific hybrids have been produced by the union of the marten and domestic cat. This would have been the right kind of cat for me to keep, if I had kept any; for why should not a poet's cat be winged as well as his horse?

In the fall the loon (*Colymbus glacialis*) came, as usual, to moult and bathe in the pond, making the woods ring with his wild laughter before I had risen. At rumor of his arrival all the Mill-dam sportsmen are on the alert, in gigs and on foot, two by two and three by three, with patent rifles and conical balls and spy-glasses. They come rustling through the woods like autumn leaves, at

least ten men to one loon. Some station themselves on this side of the pond, some on that, for the poor bird cannot be omnipresent; if he dive here he must come up there. But now the kind October wind rises, rustling the leaves and rippling the surface of the water, so that no loon can be heard or seen, though his foes sweep the pond with spy-glasses, and make the woods resound with their discharges. The waves generously rise and dash angrily, taking sides with all water-fowl, and our sportsmen must beat a retreat to town and shop and unfinished jobs. But they were too often successful. When I went to get a pail of water early in the morning I frequently saw this stately bird sailing out of my cove within a few rods. If I endeavored to overtake him in a boat, in order to see how he would manœuvre, he would dive and be completely lost, so that I did not discover him again, sometimes, till the latter part of the day. But I was more than a match for him on the surface. He commonly went off in a rain.

As I was paddling along the north shore one very calm October afternoon, for such days especially they settle on to the lakes, like the milkweed down, having looked in vain over the pond for a loon, suddenly one, sailing out from the shore toward the middle a few rods in front of me, set up his wild laugh and betrayed himself. I pursued with a paddle and he dived, but when he came up I was nearer than before. He dived again, but I miscalculated the direction he would take, and we were fifty rods apart when he came to the surface this time, for I had helped to widen the interval; and again he laughed long and loud, and with more reason than

before. He manœuvred so cunningly that I could not get within half a dozen rods of him. Each time, when he came to the surface, turning his head this way and that, he coolly surveyed the water and the land, and apparently chose his course so that he might come up where there was the widest expanse of water and at the greatest distance from the boat. It was surprising how quickly he made up his mind and put his resolve into execution. He led me at once to the widest part of the pond, and could not be driven from it. While he was thinking one thing in his brain, I was endeavoring to divine his thought in mine. It was a pretty game, played on the smooth surface of the pond, a man against a loon. Suddenly your adversary's checker disappears beneath the board, and the problem is to place yours nearest to where his will appear again. Sometimes he would come up unexpectedly on the opposite side of me, having apparently passed directly under the boat. So long-winded was he and so unweariable, that when he had swum farthest he would immediately plunge again, nevertheless; and then no wit could divine where in the deep pond, beneath the smooth surface, he might be speeding his way like a fish, for he had time and ability to visit the bottom of the pond in its deepest part. It is said that loons have been caught in the New York lakes eighty feet beneath the surface, with hooks set for trout, — though Walden is deeper than that. How surprised must the fishes be to see this ungainly visitor from another sphere speeding his way amid their schools! Yet he appeared to know his course as surely under water as on the surface, and swam much faster there. Once or twice I saw a ripple

where he approached the surface, just put his head out to reconnoitre, and instantly dived again. I found that it was as well for me to rest on my oars and wait his reappearing as to endeavor to calculate where he would rise; for again and again, when I was straining my eyes over the surface one way, I would suddenly be startled by his unearthly laugh behind me. But why, after displaying so much cunning, did he invariably betray himself the moment he came up by that loud laugh? Did not his white breast enough betray him? He was indeed a silly loon, I thought. I could commonly hear the splash of the water when he came up, and so also detected him. But after an hour he seemed as fresh as ever, dived as willingly, and swam yet farther than at first. It was surprising to see how serenely he sailed off with unruffled breast when he came to the surface, doing all the work with his webbed feet beneath. His usual note was this demoniac laughter, yet somewhat like that of a water-fowl; but occasionally, when he had balked me most successfully and come up a long way off, he uttered a long-drawn unearthly howl, probably more like that of a wolf than any bird; as when a beast puts his muzzle to the ground and deliberately howls. This was his looning, — perhaps the wildest sound that is ever heard here, making the woods ring far and wide. I concluded that he laughed in derision of my efforts confident of his own resources. Though the sky was by this time overcast, the pond was so smooth that I could see where he broke the surface when I did not hear him. His white breast, the stillness of the air, and the smoothness of the water were all against him. At length,

having come up fifty rods off, he uttered one of those prolonged howls, as if calling on the god of loons to aid him, and immediately there came a wind from the east and rippled the surface, and filled the whole air with misty rain, and I was impressed as if it were the prayer of the loon answered, and his god was angry with me; and so I left him disappearing far away on the tumultuous surface.

For hours, in fall days, I watched the ducks cunningly tack and veer and hold the middle of the pond, far from the sportsman; tricks which they will have less need to practise in Louisiana bayous. When compelled to rise they would sometimes circle round and round and over the pond at a considerable height, from which they could easily see to other ponds and the river, like black motes in the sky; and, when I thought they had gone off thither long since, they would settle down by a slanting flight of a quarter of a mile on to a distant part which was left free; but what beside safety they got by sailing in the middle of Walden I do not know, unless they love its water for the same reason that I do.

XIII

HOUSE-WARMING

IN October I went a-graping to the river meadows, and loaded myself with clusters more precious for their beauty and fragrance than for food. There, too, I admired, though I did not gather, the cranberries, small waxen gems, pendants of the meadow grass, pearly and red, which the farmer plucks with an ugly rake, leaving the smooth meadow in a snarl, heedlessly measuring them by the bushel and the dollar only, and sells the spoils of the meads to Boston and New York; destined to be *jammed*, to satisfy the tastes of lovers of Nature there. So butchers rake the tongues of bison out of the prairie grass, regardless of the torn and drooping plant. The barberry's brilliant fruit was likewise food for my eyes merely; but I collected a small store of wild apples for coddling, which the proprietor and travellers had overlooked. When chestnuts were ripe I laid up half a bushel for winter. It was very exciting at that season to roam the then boundless chestnut woods of Lincoln, — they now sleep their long sleep under the railroad, — with a bag on my shoulder, and a stick to open burs with in my hand, for I did not always wait for the frost, amid the rustling of leaves and the loud reproofs of the red squirrels and the jays, whose half-consumed nuts I sometimes stole, for the burs which they had selected

were sure to contain sound ones. Occasionally I climbed and shook the trees. They grew also behind my house, and one large tree, which almost overshadowed it, was, when in flower, a bouquet which scented the whole neighborhood, but the squirrels and the jays got most of its fruit; the last coming in flocks early in the morning and picking the nuts out of the burs before they fell. I relinquished these trees to them and visited the more distant woods composed wholly of chestnut. These nuts, as far as they went, were a good substitute for bread. Many other substitutes might, perhaps, be found. Digging one day for fishworms, I discovered the groundnut (*Apios tuberosa*) on its string, the potato of the aborigines, a sort of fabulous fruit, which I had begun to doubt if I had ever dug and eaten in childhood, as I had told, and had not dreamed it. I had often since seen its crimped red velvety blossom supported by the stems of other plants without knowing it to be the same. Cultivation has well-nigh exterminated it. It has a sweetish taste, much like that of a frost-bitten potato, and I found it better boiled than roasted. This tuber seemed like a faint promise of Nature to rear her own children and feed them simply here at some future period. In these days of fatted cattle and waving grain-fields this humble root, which was once the *totem* of an Indian tribe, is quite forgotten, or known only by its flowering vine; but let wild Nature reign here once more, and the tender and luxurious English grains will probably disappear before a myriad of foes, and without the care of man the crow may carry back even the last seed of corn to the great cornfield of the Indian's God in the southwest, whence

he is said to have brought it; but the now almost exterminated ground-nut will perhaps revive and flourish in spite of frosts and wildness, prove itself indigenous, and resume its ancient importance and dignity as the diet of the hunter tribe. Some Indian Ceres or Minerva must have been the inventor and bestower of it; and when the reign of poetry commences here, its leaves and string of nuts may be represented on our works of art.

Already, by the first of September, I had seen two or three small maples turned scarlet across the pond, beneath where the white stems of three aspens diverged, at the point of a promontory, next the water. Ah, many a tale their color told! And gradually from week to week the character of each tree came out, and it admired itself reflected in the smooth mirror of the lake. Each morning the manager of this gallery substituted some new picture, distinguished by more brilliant or harmonious coloring, for the old upon the walls.

The wasps came by thousands to my lodge in October, as to winter quarters, and settled on my windows within and on the walls overhead, sometimes deterring visitors from entering. Each morning, when they were numbed with cold, I swept some of them out, but I did not trouble myself much to get rid of them; I even felt complimented by their regarding my house as a desirable shelter. They never molested me seriously, though they bedded with me; and they gradually disappeared, into what crevices I do not know, avoiding winter and unspeakable cold.

Like the wasps, before I finally went into winter quarters in November, I used to resort to the north-

east side of Walden, which the sun, reflected from the pitch pine woods and the stony shore, made the fireside of the pond; it is so much pleasanter and wholesomer to be warmed by the sun while you can be, than by an artificial fire. I thus warmed myself by the still glowing embers which the summer, like a departed hunter, had left.

When I came to build my chimney I studied masonry. My bricks, being second-hand ones, required to be cleaned with a trowel, so that I learned more than usual of the qualities of bricks and trowels. The mortar on them was fifty years old, and was said to be still growing harder; but this is one of those sayings which men love to repeat whether they are true or not. Such sayings themselves grow harder and adhere more firmly with age, and it would take many blows with a trowel to clean an old wiseacre of them. Many of the villages of Mesopotamia are built of second-hand bricks of a very good quality, obtained from the ruins of Babylon, and the cement on them is older and probably harder still. However that may be, I was struck by the peculiar toughness of the steel which bore so many violent blows without being worn out. As my bricks had been in a chimney before, though I did not read the name of Nebuchadnezzar on them, I picked out as many fireplace bricks as I could find, to save work and waste, and I filled the spaces between the bricks about the fireplace with stones from the pond shore, and also made my mortar with the white sand from the same place. I lingered most about the fireplace, as the

most vital part of the house. Indeed, I worked so deliberately, that though I commenced at the ground in the morning, a course of bricks raised a few inches above the floor served for my pillow at night; yet I did not get a stiff neck for it that I remember; my stiff neck is of older date. I took a poet to board for a fortnight about those times, which caused me to be put to it for room. He brought his own knife, though I had two, and we used to scour them by thrusting them into the earth. He shared with me the labors of cooking. I was pleased to see my work rising so square and solid by degrees, and reflected, that, if it proceeded slowly, it was calculated to endure a long time. The chimney is to some extent an independent structure, standing on the ground, and rising through the house to the heavens; even after the house is burned it still stands sometimes, and its importance and independence are apparent. This was toward the end of summer. It was now November.

The north wind had already begun to cool the pond, though it took many weeks of steady blowing to accomplish it, it is so deep. When I began to have a fire at evening, before I plastered my house, the chimney carried smoke particularly well, because of the numerous chinks between the boards. Yet I passed some cheerful evenings in that cool and airy apartment, surrounded by the rough brown boards full of knots, and rafters with the bark on high overhead. My house never pleased my eye so much after it was plastered, though I was obliged to confess that it was more comfortable. Should not every apartment in which man dwells be lofty

enough to create some obscurity overhead, where flickering shadows may play at evening about the rafters? These forms are more agreeable to the fancy and imagination than fresco paintings or other the most expensive furniture. I now first began to inhabit my house, I may say, when I began to use it for warmth as well as shelter. I had got a couple of old fire-dogs to keep the wood from the hearth, and it did me good to see the soot form on the back of the chimney which I had built, and I poked the fire with more right and more satisfaction than usual. My dwelling was small, and I could hardly entertain an echo in it; but it seemed larger for being a single apartment and remote from neighbors. All the attractions of a house were concentrated in one room; it was kitchen, chamber, parlor, and keeping-room; and whatever satisfaction parent or child, master or servant, derive from living in a house, I enjoyed it all. Cato says, the master of a family (*patremfamilias*) must have in his rustic villa "cellam oleariam, vinariam, dolia multa, uti lubeat caritatem expectare, et rei, et virtuti, et gloriæ erit," that is, "an oil and wine cellar, many casks, so that it may be pleasant to expect hard times; it will be for his advantage, and virtue, and glory." I had in my cellar a firkin of potatoes, about two quarts of peas with the weevil in them, and on my shelf a little rice, a jug of molasses, and of rye and Indian meal a peck each.

I sometimes dream of a larger and more populous house, standing in a golden age, of enduring materials, and without gingerbread work, which shall still consist of only one room, a vast, rude, substantial, primitive

hall, without ceiling or plastering, with bare rafters and purlins supporting a sort of lower heaven over one's head, — useful to keep off rain and snow, where the king and queen posts stand out to receive your homage, when you have done reverence to the prostrate Saturn of an older dynasty on stepping over the sill; a cavernous house, wherein you must reach up a torch upon a pole to see the roof; where some may live in the fireplace, some in the recess of a window, and some on settles, some at one end of the hall, some at another, and some aloft on rafters with the spiders, if they choose; a house which you have got into when you have opened the outside door, and the ceremony is over; where the weary traveller may wash, and eat, and converse, and sleep, without further journey; such a shelter as you would be glad to reach in a tempestuous night, containing all the essentials of a house, and nothing for house-keeping; where you can see all the treasures of the house at one view, and everything hangs upon its peg that a man should use; at once kitchen, pantry, parlor, chamber, storehouse, and garret; where you can see so necessary a thing as a barrel or a ladder, so convenient a thing as a cupboard, and hear the pot boil, and pay your respects to the fire that cooks your dinner, and the oven that bakes your bread, and the necessary furniture and utensils are the chief ornaments; where the washing is not put out, nor the fire, nor the mistress, and perhaps you are sometimes requested to move from off the trap-door, when the cook would descend into the cellar, and so learn whether the ground is solid or hollow beneath you without stamping. A

house whose inside is as open and manifest as a bird's nest, and you cannot go in at the front door and out at the back without seeing some of its inhabitants; where to be a guest is to be presented with the freedom of the house, and not to be carefully excluded from seven eighths of it, shut up in a particular cell, and told to make yourself at home there, — in solitary confinement. Nowadays the host does not admit you to *his* hearth, but has got the mason to build one for yourself somewhere in his alley, and hospitality is the art of *keeping* you at the greatest distance. There is as much secrecy about the cooking as if he had a design to poison you. I am aware that I have been on many a man's premises, and might have been legally ordered off, but I am not aware that I have been in many men's houses. I might visit in my old clothes a king and queen who lived simply in such a house as I have described, if I were going their way; but backing out of a modern palace will be all that I shall desire to learn, if ever I am caught in one.

It would seem as if the very language of our parlors would lose all its nerve and degenerate into *palaver* wholly, our lives pass at such remoteness from its symbols, and its metaphors and tropes are necessarily so far fetched, through slides and dumb-waiters, as it were; in other words, the parlor is so far from the kitchen and workshop. The dinner even is only the parable of a dinner, commonly. As if only the savage dwelt near enough to Nature and Truth to borrow a trope from them. How can the scholar, who dwells away in the North West Territory or the Isle of Man, tell what is parliamentary in the kitchen?

However, only one or two of my guests were ever bold enough to stay and eat a hasty-pudding with me; but when they saw that crisis approaching they beat a hasty retreat rather, as if it would shake the house to its foundations. Nevertheless, it stood through a great many hasty-puddings.

I did not plaster till it was freezing weather. I brought over some whiter and cleaner sand for this purpose from the opposite shore of the pond in a boat, a sort of conveyance which would have tempted me to go much farther if necessary. My house had in the meanwhile been shingled down to the ground on every side. In lathing I was pleased to be able to send home each nail with a single blow of the hammer, and it was my ambition to transfer the plaster from the board to the wall neatly and rapidly. I remembered the story of a conceited fellow, who, in fine clothes, was wont to lounge about the village once, giving advice to workmen. Venturing one day to substitute deeds for words, he turned up his cuffs, seized a plasterer's board, and having loaded his trowel without mishap, with a complacent look toward the lathing overhead, made a bold gesture thitherward; and straightway, to his complete discomfiture, received the whole contents in his ruffled bosom. I admired anew the economy and convenience of plastering, which so effectually shuts out the cold and takes a handsome finish, and I learned the various casualties to which the plasterer is liable. I was surprised to see how thirsty the bricks were which drank up all the moisture in my plaster before I had smoothed it, and how many pailfuls of water it takes to christen a new hearth. I had the previous winter made

a small quantity of lime by burning the shells of the *Unio fluviatilis*, which our river affords, for the sake of the experiment; so that I knew where my materials came from. I might have got good limestone within a mile or two and burned it myself, if I had cared to do so.

The pond had in the meanwhile skimmed over in the shadiest and shallowest coves, some days or even weeks before the general freezing. The first ice is especially interesting and perfect, being hard, dark, and transparent, and affords the best opportunity that ever offers for examining the bottom where it is shallow; for you can lie at your length on ice only an inch thick, like a skater insect on the surface of the water, and study the bottom at your leisure, only two or three inches distant, like a picture behind a glass, and the water is necessarily always smooth then. There are many furrows in the sand where some creature has travelled about and doubled on its tracks; and, for wrecks, it is strewn with the cases of caddis-worms made of minute grains of white quartz. Perhaps these have creased it, for you find some of their cases in the furrows, though they are deep and broad for them to make. But the ice itself is the object of most interest, though you must improve the earliest opportunity to study it. If you examine it closely the morning after it freezes, you find that the greater part of the bubbles, which at first appeared to be within it, are against its under surface, and that more are continually rising from the bottom; while the ice is as yet comparatively solid and dark, that is, you see the water through it. These

bubbles are from an eightieth to an eighth of an inch in diameter, very clear and beautiful, and you see your face reflected in them through the ice. There may be thirty or forty of them to a square inch. There are also already within the ice narrow oblong perpendicular bubbles about half an inch long, sharp cones with the apex upward; or oftener, if the ice is quite fresh, minute spherical bubbles one directly above another, like a string of beads. But these within the ice are not so numerous nor obvious as those beneath. I sometimes used to cast on stones to try the strength of the ice, and those which broke through carried in air with them, which formed very large and conspicuous white bubbles beneath. One day when I came to the same place forty-eight hours afterward, I found that those large bubbles were still perfect, though an inch more of ice had formed, as I could see distinctly by the seam in the edge of a cake. But as the last two days had been very warm, like an Indian summer, the ice was not now transparent, showing the dark green color of the water, and the bottom, but opaque and whitish or gray, and though twice as thick was hardly stronger than before, for the air bubbles had greatly expanded under this heat and run together, and lost their regularity; they were no longer one directly over another, but often like silvery coins poured from a bag, one overlapping another, or in thin flakes, as if occupying slight cleavages. The beauty of the ice was gone, and it was too late to study the bottom. Being curious to know what position my great bubbles occupied with regard to the new ice, I broke out a cake containing a middling sized one, and turned it bottom

upward. The new ice had formed around and under the bubble, so that it was included between the two ices. It was wholly in the lower ice, but close against the upper, and was flattish, or perhaps slightly lenticular, with a rounded edge, a quarter of an inch deep by four inches in diameter; and I was surprised to find that directly under the bubble the ice was melted with great regularity in the form of a saucer reversed, to the height of five eighths of an inch in the middle, leaving a thin partition there between the water and the bubble, hardly an eighth of an inch thick; and in many places the small bubbles in this partition had burst out downward, and probably there was no ice at all under the largest bubbles, which were a foot in diameter. I inferred that the infinite number of minute bubbles which I had first seen against the under surface of the ice were now frozen in likewise, and that each, in its degree, had operated like a burning-glass on the ice beneath to melt and rot it. These are the little air-guns which contribute to make the ice crack and whoop.

At length the winter set in in good earnest, just as I had finished plastering, and the wind began to howl around the house as if it had not had permission to do so till then. Night after night the geese came lumbering in in the dark with a clangor and a whistling of wings, even after the ground was covered with snow, some to alight in Walden, and some flying low over the woods toward Fair Haven, bound for Mexico. Several times, when returning from the village at ten or eleven o'clock at night, I heard the tread of a flock of geese, or else ducks, on

the dry leaves in the woods by a pond-hole behind my dwelling, where they had come up to feed, and the faint honk or quack of their leader as they hurried off. In 1845 Walden froze entirely over for the first time on the night of the 22d of December, Flint's and other shallower ponds and the river having been frozen ten days or more; in '46, the 16th; in '49, about the 31st; and in '50, about the 27th of December; in '52, the 5th of January; in '53, the 31st of December. The snow had already covered the ground since the 25th of November, and surrounded me suddenly with the scenery of winter. I withdrew yet farther into my shell, and endeavored to keep a bright fire both within my house and within my breast. My employment out of doors now was to collect the dead wood in the forest, bringing it in my hands or on my shoulders, or sometimes trailing a dead pine tree under each arm to my shed. An old forest fence which had seen its best days was a great haul for me. I sacrificed it to Vulcan, for it was past serving the god Terminus. How much more interesting an event is that man's supper who has just been forth in the snow to hunt, nay, you might say, steal, the fuel to cook it with! His bread and meat are sweet. There are enough fagots and waste wood of all kinds in the forests of most of our towns to support many fires, but which at present warm none, and, some think, hinder the growth of the young wood. There was also the driftwood of the pond. In the course of the summer I had discovered a raft of pitch pine logs with the bark on, pinned together by the Irish when the railroad was built. This I hauled up partly on the shore. After soaking two years and then lying

high six months it was perfectly sound, though waterlogged past drying. I amused myself one winter day with sliding this piecemeal across the pond, nearly half a mile, skating behind with one end of a log fifteen feet long on my shoulder, and the other on the ice; or I tied several logs together with a birch withe, and then, with a longer birch or alder which had a hook at the end, dragged them across. Though completely waterlogged and almost as heavy as lead, they not only burned long, but made a very hot fire; nay, I thought that they burned better for the soaking, as if the pitch, being confined by the water, burned longer, as in a lamp.

Gilpin, in his account of the forest borderers of England, says that "the encroachments of trespassers, and the houses and fences thus raised on the borders of the forest," were "considered as great nuisances by the old forest law, and were severely punished under the name of *purprestures*, as tending *ad terrorem ferarum* — *ad nocumentum forestae*, etc.," to the frightening of the game and the detriment of the forest. But I was interested in the preservation of the venison and the vert more than the hunters or woodchoppers, and as much as though I had been the Lord Warden himself; and if any part was burned, though I burned it myself by accident, I grieved with a grief that lasted longer and was more inconsolable than that of the proprietors; nay, I grieved when it was cut down by the proprietors themselves. I would that our farmers when they cut down a forest felt some of that awe which the old Romans did when they came to thin, or let in the light to, a consecrated grove (*lucum conlucare*), that is, would believe that it is sacred to

some god. The Roman made an expiatory offering, and prayed, Whatever god or goddess thou art to whom this grove is sacred, be propitious to me, my family, and children, etc.

It is remarkable what a value is still put upon wood even in this age and in this new country, a value more permanent and universal than that of gold. After all our discoveries and inventions no man will go by a pile of wood. It is as precious to us as it was to our Saxon and Norman ancestors. If they made their bows of it, we make our gun-stocks of it. Michaux, more than thirty years ago, says that the price of wood for fuel in New York and Philadelphia "nearly equals, and sometimes exceeds, that of the best wood in Paris, though this immense capital annually requires more than three hundred thousand cords, and is surrounded to the distance of three hundred miles by cultivated plains." In this town the price of wood rises almost steadily, and the only question is, how much higher it is to be this year than it was the last. Mechanics and tradesmen who come in person to the forest on no other errand, are sure to attend the wood auction, and even pay a high price for the privilege of gleaning after the woodchopper. It is now many years that men have resorted to the forest for fuel and the materials of the arts: the New Englander and the New Hollander, the Parisian and the Celt, the farmer and Robin Hood, Goody Blake and Harry Gill; in most parts of the world the prince and the peasant, the scholar and the savage, equally require still a few sticks from the forest to warm them and cook their food. Neither could I do without them.

Every man looks at his wood-pile with a kind of affection. I loved to have mine before my window, and the more chips the better to remind me of my pleasing work. I had an old axe which nobody claimed, with which by spells in winter days, on the sunny side of the house, I played about the stumps which I had got out of my bean-field. As my driver prophesied when I was plowing, they warmed me twice, — once while I was splitting them, and again when they were on the fire, so that no fuel could give out more heat. As for the axe, I was advised to get the village blacksmith to “jump” it; but I jumped him, and, putting a hickory helve from the woods into it, made it do. If it was dull, it was at least hung true.

A few pieces of fat pine were a great treasure. It is interesting to remember how much of this food for fire is still concealed in the bowels of the earth. In previous years I had often gone “prospecting” over some bare hillside, where a pitch pine wood had formerly stood, and got out the fat pine roots. They are almost indestructible. Stumps thirty or forty years old, at least, will still be sound at the core, though the sapwood has all become vegetable mould, as appears by the scales of the thick bark forming a ring level with the earth four or five inches distant from the heart. With axe and shovel you explore this mine, and follow the marrowy store, yellow as beef tallow, or as if you had struck on a vein of gold, deep into the earth. But commonly I kindled my fire with the dry leaves of the forest, which I had stored up in my shed before the snow came. Green hickory finely split makes the woodchopper’s kindlings, when he has a camp in the woods. Once in a while I got

a little of this. When the villagers were lighting their fires beyond the horizon, I too gave notice to the various wild inhabitants of Walden vale, by a smoky streamer from my chimney, that I was awake. —

Light-winged Smoke, Icarian bird,
Melting thy pinions in thy upward flight,
Lark without song, and messenger of dawn,
Circling above the hamlets as thy nest;
Or else, departing dream, and shadowy form
Of midnight vision, gathering up thy skirts;
By night star-veiling, and by day
Darkening the light and blotting out the sun;
Go thou my incense upward from this hearth,
And ask the gods to pardon this clear flame.

Hard green wood just cut, though I used but little of that, answered my purpose better than any other. I sometimes left a good fire when I went to take a walk in a winter afternoon; and when I returned, three or four hours afterward, it would be still alive and glowing. My house was not empty though I was gone. It was as if I had left a cheerful housekeeper behind. It was I and Fire that lived there; and commonly my housekeeper proved trustworthy. One day, however, as I was splitting wood, I thought that I would just look in at the window and see if the house was not on fire; it was the only time I remember to have been particularly anxious on this score; so I looked and saw that a spark had caught my bed, and I went in and extinguished it when it had burned a place as big as my hand. But my house occupied so sunny and sheltered a position, and its roof was so low, that I could afford to let the fire go out in the middle of almost any winter day.

The moles nested in my cellar, nibbling every third potato, and making a snug bed even there of some hair left after plastering and of brown paper; for even the wildest animals love comfort and warmth as well as man, and they survive the winter only because they are so careful to secure them. Some of my friends spoke as if I was coming to the woods on purpose to freeze myself. The animal merely makes a bed, which he warms with his body, in a sheltered place; but man, having discovered fire, boxes up some air in a spacious apartment, and warms that, instead of robbing himself, makes that his bed, in which he can move about divested of more cumbrous clothing, maintain a kind of summer in the midst of winter, and by means of windows even admit the light, and with a lamp lengthen out the day. Thus he goes a step or two beyond instinct, and saves a little time for the fine arts. Though, when I had been exposed to the rudest blasts a long time, my whole body began to grow torpid, when I reached the genial atmosphere of my house I soon recovered my faculties and prolonged my life. But the most luxuriously housed has little to boast of in this respect, nor need we trouble ourselves to speculate how the human race may be at last destroyed. It would be easy to cut their threads any time with a little sharper blast from the north. We go on dating from Cold Fridays and Great Snows; but a little colder Friday, or greater snow would put a period to man's existence on the globe.

The next winter I used a small cooking-stove for economy, since I did not own the forest; but it did not keep fire so well as the open fireplace. Cooking was then,

for the most part, no longer a poetic, but merely a chemic process. It will soon be forgotten, in these days of stoves, that we used to roast potatoes in the ashes, after the Indian fashion. The stove not only took up room and scented the house, but it concealed the fire, and I felt as if I had lost a companion. You can always see a face in the fire. The laborer, looking into it at evening, purifies his thoughts of the dross and earthiness which they have accumulated during the day. But I could no longer sit and look into the fire, and the pertinent words of a poet recurred to me with new force. —

“ Never, bright flame, may be denied to me
Thy dear, life imaging, close sympathy.
What but my hopes shot upward e'er so bright?
What but my fortunes sunk so low in night?
Why art thou banished from our hearth and hall,
Thou who art welcomed and beloved by all?
Was thy existence then too fanciful
For our life's common light, who are so dull?
Did thy bright gleam mysterious converse hold
With our congenial souls? secrets too bold?

Well, we are safe and strong, for now we sit
Beside a hearth where no dim shadows flit,
Where nothing cheers nor saddens, but a fire
Warms feet and hands — nor does to more aspire;
By whose compact utilitarian heap
The present may sit down and go to sleep,
Nor fear the ghosts who from the dim past walked,
And with us by the unequal light of the old wood fire talked.

XIV

FORMER INHABITANTS; AND WINTER VISITORS

I WEATHERED some merry snow-storms, and spent some cheerful winter evenings by my fireside, while the snow whirled wildly without, and even the hooting of the owl was hushed. For many weeks I met no one in my walks but those who came occasionally to cut wood and sled it to the village. The elements, however, abetted me in making a path through the deepest snow in the woods, for when I had once gone through the wind blew the oak leaves into my tracks, where they lodged, and by absorbing the rays of the sun melted the snow, and so not only made a dry bed for my feet, but in the night their dark line was my guide. For human society I was obliged to conjure up the former occupants of these woods. Within the memory of many of my townsmen the road near which my house stands resounded with the laugh and gossip of inhabitants, and the woods which border it were notched and dotted here and there with their little gardens and dwellings, though it was then much more shut in by the forest than now. In some places, within my own remembrance, the pines would scrape both sides of a chaise at once, and women and children who were compelled to go this way to Lincoln alone and on foot did it with fear, and often ran a good part

of the distance. Though mainly but a humble route to neighboring villages, or for the woodman's team, it once amused the traveller more than now by its variety, and lingered longer in his memory. Where now firm open fields stretch from the village to the woods, it then ran through a maple swamp on a foundation of logs, the remnants of which, doubtless, still underlie the present dusty highway, from the Stratton, now the Alms-House, Farm, to Brister's Hill.

East of my bean-field, across the road, lived Cato Ingraham, slave of Duncan Ingraham, Esquire, gentleman, of Concord village, who built his slave a house, and gave him permission to live in Walden Woods; — Cato, not Uticensis, but Concordiensis. Some say that he was a Guinea Negro. There are a few who remember his little patch among the walnuts, which he let grow up till he should be old and need them; but a younger and whiter speculator got them at last. He too, however, occupies an equally narrow house at present. Cato's half-obliterated cellar-hole still remains, though known to few, being concealed from the traveller by a fringe of pines. It is now filled with the smooth sumach (*Rhus glabra*), and one of the earliest species of goldenrod (*Solidago stricta*) grows there luxuriantly.

Here, by the very corner of my field, still nearer to town, Zilpha, a colored woman, had her little house, where she spun linen for the townsfolk, making the Walden Woods ring with her shrill singing, for she had a loud and notable voice. At length, in the war of 1812, her dwelling was set on fire by English soldiers, prisoners on parole, when she was away, and her cat and dog and

hens were all burned up together. She led a hard life, and somewhat inhumane. One old frequenter of these woods remembers, that as he passed her house one noon he heard her muttering to herself over her gurgling pot, — “Ye are all bones, bones!” I have seen bricks amid the oak copse there.

Down the road, on the right hand, on Brister’s Hill, lived Brister Freeman, “a handy Negro,” slave of Squire Cummings once, — there where grow still the apple trees which Brister planted and tended; large old trees now, but their fruit still wild and ciderish to my taste. Not long since I read his epitaph in the old Lincoln burying-ground, a little on one side, near the unmarked graves of some British grenadiers who fell in the retreat from Concord, — where he is styled “Sippio Brister,” — Scipio Africanus he had some title to be called, — “a man of color,” as if he were discolored. It also told me, with staring emphasis, when he died; which was but an indirect way of informing me that he ever lived. With him dwelt Fenda, his hospitable wife, who told fortunes, yet pleasantly, — large, round, and black, blacker than any of the children of night, such a dusky orb as never rose on Concord before or since.

Farther down the hill, on the left, on the old road in the woods, are marks of some homestead of the Stratton family; whose orchard once covered all the slope of Brister’s Hill, but was long since killed out by pitch pines, excepting a few stumps, whose old roots furnish still the wild stocks of many a thrifty village tree.

Nearer yet to town, you come to Breed’s location, on

the other side of the way, just on the edge of the wood; ground famous for the pranks of a demon not distinctly named in old mythology, who has acted a prominent and astounding part in our New England life, and deserves, as much as any mythological character, to have his biography written one day; who first comes in the guise of a friend or hired man, and then robs and murders the whole family, — New-England Rum. But history must not yet tell the tragedies enacted here; let time intervene in some measure to assuage and lend an azure tint to them. Here the most indistinct and dubious tradition says that once a tavern stood; the well the same, which tempered the traveller's beverage and refreshed his steed. Here then men saluted one another, and heard and told the news, and went their ways again.

Breed's hut was standing only a dozen years ago, though it had long been unoccupied. It was about the size of mine. It was set on fire by mischievous boys, one Election night, if I do not mistake. I lived on the edge of the village then, and had just lost myself over Davenant's "Gondibert," that winter that I labored with a lethargy, — which, by the way, I never knew whether to regard as a family complaint, having an uncle who goes to sleep shaving himself, and is obliged to sprout potatoes in a cellar Sundays, in order to keep awake and keep the Sabbath, or as the consequence of my attempt to read Chalmers' collection of English poetry without skipping. It fairly overcame my Nervii. I had just sunk my head on this when the bells rung fire, and in hot haste the engines rolled that way, led by a strag-

gling troop of men and boys, and I among the foremost, for I had leaped the brook. We thought it was far south over the woods, — we who had run to fires before, — barn, shop, or dwelling-house, or all together. “It’s Baker’s barn,” cried one. “It is the Codman place,” affirmed another. And then fresh sparks went up above the wood, as if the roof fell in, and we all shouted “Concord to the rescue!” Wagons shot past with furious speed and crushing loads, bearing, perchance, among the rest, the agent of the Insurance Company, who was bound to go however far; and ever and anon the engine bell tinkled behind, more slow and sure; and rearmost of all, as it was afterward whispered, came they who set the fire and gave the alarm. Thus we kept on like true idealists, rejecting the evidence of our senses, until at a turn in the road we heard the crackling and actually felt the heat of the fire from over the wall, and realized, alas! that we were there. The very nearness of the fire but cooled our ardor. At first we thought to throw a frog-pond on to it; but concluded to let it burn, it was so far gone and so worthless. So we stood round our engine, jostled one another, expressed our sentiments through speaking-trumpets, or in lower tone referred to the great conflagrations which the world has witnessed, including Bascom’s shop, and, between ourselves, we thought that, were we there in season with our “tub,” and a full frog-pond by, we could turn that threatened last and universal one into another flood. We finally retreated without doing any mischief, — returned to sleep and “Gondibert.” But as for “Gondibert,” I would

except that passage in the preface about wit being the soul's powder, — "but most of mankind are strangers to wit, as Indians are to powder."

It chanced that I walked that way across the fields the following night, about the same hour, and hearing a low moaning at this spot, I drew near in the dark, and discovered the only survivor of the family that I know, the heir of both its virtues and its vices, who alone was interested in this burning, lying on his stomach and looking over the cellar wall at the still smouldering cinders beneath, muttering to himself, as is his wont. He had been working far off in the river meadows all day, and had improved the first moments that he could call his own to visit the home of his fathers and his youth. He gazed into the cellar from all sides and points of view by turns, always lying down to it, as if there was some treasure, which he remembered, concealed between the stones, where there was absolutely nothing but a heap of bricks and ashes. The house being gone, he looked at what there was left. He was soothed by the sympathy which my mere presence implied, and showed me, as well as the darkness permitted, where the well was covered up; which, thank Heaven, could never be burned; and he groped long about the wall to find the well-sweep which his father had cut and mounted, feeling for the iron hook or staple by which a burden had been fastened to the heavy end, — all that he could now cling to, — to convince me that it was no common "rider." I felt it, and still remark it almost daily in my walks, for by it hangs the history of a family.

Once more, on the left, where are seen the well and

lilac bushes by the wall, in the now open field, lived Nutting and Le Grosse. But to return toward Lincoln.

Farther in the woods than any of these, where the road approaches nearest to the pond, Wyman the potter squatted, and furnished his townsmen with earthenware, and left descendants to succeed him. Neither were they rich in worldly goods, holding the land by sufferance while they lived; and there often the sheriff came in vain to collect the taxes, and "attached a chip," for form's sake, as I have read in his accounts, there being nothing else that he could lay his hands on. One day in midsummer, when I was hoeing, a man who was carrying a load of pottery to market stopped his horse against my field and inquired concerning Wyman the younger. He had long ago bought a potter's wheel of him, and wished to know what had become of him. I had read of the potter's clay and wheel in Scripture, but it had never occurred to me that the pots we use were not such as had come down unbroken from those days, or grown on trees like gourds somewhere, and I was pleased to hear that so fictile an art was ever practiced in my neighborhood.

The last inhabitant of these woods before me was an Irishman, Hugh Quoil (if I have spelt his name with coil enough), who occupied Wyman's tenement, — Col. Quoil, he was called. Rumor said that he had been a soldier at Waterloo. If he had lived I should have made him fight his battles over again. His trade here was that of a ditcher. Napoleon went to St. Helena; Quoil came to Walden Woods. All I know of him is tragic. He was a man of manners, like one who had

seen the world, and was capable of more civil speech than you could well attend to. He wore a greatcoat in midsummer, being affected with the trembling delirium, and his face was the color of carmine. He died in the road at the foot of Brister's Hill shortly after I came to the woods, so that I have not remembered him as a neighbor. Before his house was pulled down, when his comrades avoided it as "an unlucky castle," I visited it. There lay his old clothes curled up by use, as if they were himself, upon his raised plank bed. His pipe lay broken on the hearth, instead of a bowl broken at the fountain. The last could never have been the symbol of his death, for he confessed to me that, though he had heard of Brister's Spring, he had never seen it; and soiled cards, kings of diamonds, spades, and hearts, were scattered over the floor. One black chicken which the administrator could not catch, black as night and as silent, not even croaking, awaiting Reynard, still went to roost in the next apartment. In the rear there was the dim outline of a garden, which had been planted but had never received its first hoeing, owing to those terrible shaking fits, though it was now harvest time. It was overrun with Roman wormwood and beggar-ticks, which last stuck to my clothes for all fruit. The skin of a woodchuck was freshly stretched upon the back of the house, a trophy of his last Waterloo; but no warm cap or mittens would he want more.

Now only a dent in the earth marks the site of these dwellings, with buried cellar stones, and strawberries, raspberries, thimble-berries, hazel-bushes, and sumachs growing in the sunny sward there; some pitch

pine or gnarled oak occupies what was the chimney nook, and a sweet-scented black birch, perhaps, waves where the door-stone was. Sometimes the well dent is visible, where once a spring oozed; now dry and tearless grass; or it was covered deep, — not to be discovered till some late day, — with a flat stone under the sod, when the last of the race departed. What a sorrowful act must that be, — the covering up of wells! coincident with the opening of wells of tears. These cellar dents, like deserted fox burrows, old holes, are all that is left where once were the stir and bustle of human life, and “fate, free will, foreknowledge absolute,” in some form and dialect or other were by turns discussed. But all I can learn of their conclusions amounts to just this, that “Cato and Brister pulled wool;” which is about as edifying as the history of more famous schools of philosophy.

Still grows the vivacious lilac a generation after the door and lintel and the sill are gone, unfolding its sweet-scented flowers each spring, to be plucked by the mus- ing traveller; planted and tended once by children’s hands, in front-yard plots, — now standing by wall-sides in retired pastures, and giving place to new-rising forests; — the last of that stirp, sole survivor of that family. Little did the dusky children think that the puny slip with its two eyes only, which they stuck in the ground in the shadow of the house and daily watered, would root itself so, and outlive them, and house itself in the rear that shaded it, and grown man’s garden and orchard, and tell their story faintly to the lone wanderer a half-century after they had grown up and died, —

blossoming as fair, and smelling as sweet, as in that first spring. I mark its still tender, civil, cheerful lilac colors.

But this small village, germ of something more, why did it fail while Concord keeps its ground? Were there no natural advantages, — no water privileges, forsooth? Ay, the deep Walden Pond and cool Brister's Spring, — privilege to drink long and healthy draughts at these, all unimproved by these men but to dilute their glass. They were universally a thirsty race. Might not the basket, stable-broom, mat-making, corn-parching, linen-spinning, and pottery business have thrived here, making the wilderness to blossom like the rose, and a numerous posterity have inherited the land of their fathers? The sterile soil would at least have been proof against a lowland degeneracy. Alas! how little does the memory of these human inhabitants enhance the beauty of the landscape! Again, perhaps, Nature will try, with me for a first settler, and my house raised last spring to be the oldest in the hamlet.

I am not aware that any man has ever built on the spot which I occupy. Deliver me from a city built on the site of a more ancient city, whose materials are ruins, whose gardens cemeteries. The soil is blanched and accursed there, and before that becomes necessary the earth itself will be destroyed. With such reminiscences I peopled the woods and lulled myself asleep.

At this season I seldom had a visitor. When the snow lay deepest no wanderer ventured near my house for a week or fortnight at a time, but there I lived as

snug as a meadow mouse, or as cattle and poultry which are said to have survived for a long time buried in drifts, even without food; or like that early settler's family in the town of Sutton, in this State, whose cottage was completely covered by the great snow of 1717 when he was absent, and an Indian found it only by the hole which the chimney's breath made in the drift, and so relieved the family. But no friendly Indian concerned himself about me; nor needed he, for the master of the house was at home. The Great Snow! How cheerful it is to hear of! When the farmers could not get to the woods and swamps with their teams, and were obliged to cut down the shade trees before their houses, and, when the crust was harder, cut off the trees in the swamps, ten feet from the ground, as it appeared the next spring.

In the deepest snows, the path which I used from the highway to my house, about half a mile long, might have been represented by a meandering dotted line, with wide intervals between the dots. For a week of even weather I took exactly the same number of steps, and of the same length, coming and going, stepping deliberately and with the precision of a pair of dividers in my own deep tracks, — to such routine the winter reduces us, — yet often they were filled with heaven's own blue. But no weather interfered fatally with my walks, or rather my going abroad, for I frequently tramped eight or ten miles through the deepest snow to keep an appointment with a beech tree, or a yellow birch, or an old acquaintance among the pines; when the ice and snow causing their limbs to droop, and so

sharpening their tops, had changed the pines into fir trees; wading to the tops of the highest hills when the snow was nearly two feet deep on a level, and shaking down another snow-storm on my head at every step; or sometimes creeping and floundering thither on my hands and knees, when the hunters had gone into winter quarters. One afternoon I amused myself by watching a barred owl (*Strix nebulosa*) sitting on one of the lower dead limbs of a white pine, close to the trunk, in broad daylight, I standing within a rod of him. He could hear me when I moved and crouched the snow with my feet, but could not plainly see me. When I made most noise he would stretch out his neck, and erect his neck feathers, and open his eyes wide; but their lids soon fell again, and he began to nod. I too felt a slumberous influence after watching him half an hour, as he sat thus with his eyes half open, like a cat, winged brother of the cat. There was only a narrow slit left between their lids, by which he preserved a peninsular relation to me; thus, with half-shut eyes, looking out from the land of dreams, and endeavoring to realize me, vague object or mote that interrupted his visions. At length, on some louder noise or my nearer approach, he would grow uneasy and sluggishly turn about on his perch, as if impatient at having his dreams disturbed; and when he launched himself off and flapped through the pines, spreading his wings to unexpected breadth, I could not hear the slightest sound from them. Thus, guided amid the pine boughs rather by a delicate sense of their neighborhood than by sight, feeling his twilight way, as it were, with his sensitive pin-

ions, he found a new perch, where he might in peace await the dawning of his day.

As I walked over the long causeway made for the railroad through the meadows, I encountered many a blustering and nipping wind, for nowhere has it freer play; and when the frost had smitten me on one cheek, heathen as I was, I turned to it the other also. Nor was it much better by the carriage road from Brister's Hill. For I came to town still, like a friendly Indian, when the contents of the broad open fields were all piled up between the walls of the Walden road, and half an hour sufficed to obliterate the tracks of the last traveller. And when I returned new drifts would have formed, through which I floundered, where the busy northwest wind had been depositing the powdery snow round a sharp angle in the road, and not a rabbit's track, nor even the fine print, the small type, of a meadow mouse was to be seen. Yet I rarely failed to find, even in mid-winter, some warm and springy swamp where the grass and the skunk-cabbage still put forth with perennial verdure, and some hardier bird occasionally awaited the return of spring.

Sometimes, notwithstanding the snow, when I returned from my walk at evening I crossed the deep tracks of a woodchopper leading from my door, and found his pile of whittlings on the hearth, and my house filled with the odor of his pipe. Or on a Sunday afternoon, if I chanced to be at home, I heard the cronching of the snow made by the step of a long-headed farmer, who from far through the woods sought my house, to have a social "crack;" one of the few of his vocation

who are "men on their farms;" who donned a frock instead of a professor's gown, and is as ready to extract the moral out of church or state as to haul a load of manure from his barn-yard. We talked of rude and simple times, when men sat about large fires in cold, bracing weather, with clear heads; and when other dessert failed, we tried our teeth on many a nut which wise squirrels have long since abandoned, for those which have the thickest shells are commonly empty.

The one who came from farthest to my lodge, through deepest snows and most dismal tempests, was a poet. A farmer, a hunter, a soldier, a reporter, even a philosopher, may be daunted; but nothing can deter a poet, for he is actuated by pure love. Who can predict his comings and goings? His business calls him out at all hours, even when doctors sleep. We made that small house ring with boisterous mirth and resound with the murmur of much sober talk, making amends then to Walden vale for the long silences. Broadway was still and deserted in comparison. At suitable intervals there were regular salutes of laughter, which might have been referred indifferently to the last-uttered or the forth-coming jest. We made many a "bran new" theory of life over a thin dish of gruel, which combined the advantages of conviviality with the clear-headedness which philosophy requires.

I should not forget that during my last winter at the pond there was another welcome visitor, who at one time came through the village, through snow and rain and darkness, till he saw my lamp through the trees, and shared with me some long winter evenings. One of the

last of the philosophers, — Connecticut gave him to the world, — he peddled first her wares, afterwards, as he declares, his brains. These he peddles still, prompting God and disgracing man, bearing for fruit his brain only, like the nut its kernel. I think that he must be the man of the most faith of any alive. His words and attitude always suppose a better state of things than other men are acquainted with, and he will be the last man to be disappointed as the ages revolve. He has no venture in the present. But though comparatively disregarded now, when his day comes, laws unsuspected by most will take effect, and masters of families and rulers will come to him for advice. —

“How blind that cannot see serenity !”

A true friend of man; almost the only friend of human progress. An Old Mortality, say rather an Immortality, with unwearied patience and faith making plain the image engraven in men's bodies, the God of whom they are but defaced and leaning monuments. With his hospitable intellect he embraces children, beggars, insane, and scholars, and entertains the thought of all, adding to it commonly some breadth and elegance. I think that he should keep a caravansary on the world's highway, where philosophers of all nations might put up, and on his sign should be printed, “Entertainment for man, but not for his beast. Enter ye that have leisure and a quiet mind, who earnestly seek the right road.” He is perhaps the sanest man and has the fewest crotchets of any I chance to know; the same yesterday and to-morrow. Of yore we had sauntered and talked, and effect-

ually put the world behind us; for he was pledged to no institution in it, freeborn, *ingenuus*. Whichever way we turned, it seemed that the heavens and the earth had met together, since he enhanced the beauty of the landscape. A blue-robed man, whose fittest roof is the overarching sky which reflects his serenity. I do not see how he can ever die; Nature cannot spare him.

Having each some shingles of thought well dried, we sat and whittled them, trying our knives, and admiring the clear yellowish grain of the pumpkin pine. We waded so gently and reverently, or we pulled together so smoothly, that the fishes of thought were not scared from the stream, nor feared any angler on the bank, but came and went grandly, like the clouds which float through the western sky, and the mother-o'-pearl flocks which sometimes form and dissolve there. There we worked, revising mythology, rounding a fable here and there, and building castles in the air for which earth offered no worthy foundation. Great Looker! Great Expecter! to converse with whom was a New England Night's Entertainment. Ah! such discourse we had, hermit and philosopher, and the old settler I have spoken of, — we three, — it expanded and racked my little house; I should not dare to say how many pounds' weight there was above the atmospheric pressure on every circular inch; it opened its seams so that they had to be calked with much dulness thereafter to stop the consequent leak; — but I had enough of that kind of oakum already picked.

There was one other with whom I had "solid seasons," long to be remembered, at his house in the vil-

lage, and who looked in upon me from time to time; but I had no more for society there.

There too, as everywhere, I sometimes expected the Visitor who never comes. The Vishnu Purana says, "The house-holder is to remain at eventide in his courtyard as long as it takes to milk a cow, or longer if he pleases, to await the arrival of a guest." I often performed this duty of hospitality, waited long enough to milk a whole herd of cows, but did not see the man approaching from the town.

WINTER ANIMALS

WHEN the ponds were firmly frozen, they afforded not only new and shorter routes to many points, but new views from their surfaces of the familiar landscape around them. When I crossed Flint's Pond, after it was covered with snow, though I had often paddled about and skated over it, it was so unexpectedly wide and so strange that I could think of nothing but Baffin's Bay. The Lincoln hills rose up around me at the extremity of a snowy plain, in which I did not remember to have stood before; and the fishermen, at an indeterminate distance over the ice, moving slowly about with their wolfish dogs, passed for sealers or Esquimaux, or in misty weather loomed like fabulous creatures, and I did not know whether they were giants or pygmies. I took this course when I went to lecture in Lincoln in the evening, travelling in no road and passing no house between my own hut and the lecture room. In Goose Pond, which lay in my way, a colony of muskrats dwelt, and raised their cabins high above the ice, though none could be seen abroad when I crossed it. Walden, being like the rest usually bare of snow, or with only shallow and interrupted drifts on it, was my yard where I could walk freely when the snow was nearly two feet deep on a level elsewhere and the villagers were con-

fined to their streets. There, far from the village street, and except at very long intervals, from the jingle of sleigh-bells, I slid and skated, as in a vast moose-yard well trodden, overhung by oak woods and solemn pines bent down with snow or bristling with icicles.

For sounds in winter nights, and often in winter days, I heard the forlorn but melodious note of a hooting owl indefinitely far; such a sound as the frozen earth would yield if struck with a suitable plectrum, the very *lingua vernacula* of Walden Wood, and quite familiar to me at last, though I never saw the bird while it was making it. I seldom opened my door in a winter evening without hearing it; *Hoo hoo hoo*, *hoorer hoo*, sounded sonorously, and the first three syllables accented somewhat like *how der do*; or sometimes *hoo hoo* only. One night in the beginning of winter, before the pond froze over, about nine o'clock, I was startled by the loud honking of a goose, and, stepping to the door, heard the sound of their wings like a tempest in the woods as they flew low over my house. They passed over the pond toward Fair Haven, seemingly deterred from settling by my light, their commodore honking all the while with a regular beat. Suddenly an unmistakable cat owl from very near me, with the most harsh and tremendous voice I ever heard from any inhabitant of the woods, responded at regular intervals to the goose, as if determined to expose and disgrace this intruder from Hudson's Bay by exhibiting a greater compass and volume of voice in a native, and *boo-hoo* him out of Concord horizon. What do you mean by alarming the citadel at this time of night consecrated to me? Do you

think I am ever caught napping at such an hour, and that I have not got lungs and a larynx as well as yourself? *Boo-hoo, boo-hoo, boo-hoo!* It was one of the most thrilling discords I ever heard. And yet, if you had a discriminating ear, there were in it the elements of a concord such as these plains never saw nor heard.

I also heard the whooping of the ice in the pond, my great bed-fellow in that part of Concord, as if it were restless in its bed and would fain turn over, were troubled with flatulency and bad dreams; or I was waked by the cracking of the ground by the frost, as if some one had driven a team against my door, and in the morning would find a crack in the earth a quarter of a mile long and a third of an inch wide.

Sometimes I heard the foxes as they ranged over the snow-crust, in moonlight nights, in search of a partridge or other game, barking raggedly and demoniacally like forest dogs, as if laboring with some anxiety, or seeking expression, struggling for light and to be dogs outright and run freely in the streets; for if we take the ages into our account, may there not be a civilization going on among brutes as well as men? They seemed to me to be rudimental, burrowing men, still standing on their defence, awaiting their transformation. Sometimes one came near to my window, attracted by my light, barked a vulpine curse at me, and then retreated.

Usually the red squirrel (*Sciurus Hudsonius*) waked me in the dawn, coursing over the roof and up and down the sides of the house, as if sent out of the woods for this purpose. In the course of the winter I threw out half a bushel of ears of sweet corn, which had not

got ripe, on to the snow-crust by my door, and was amused by watching the motions of the various animals which were baited by it. In the twilight and the night the rabbits came regularly and made a hearty meal. All day long the red squirrels came and went, and afforded me much entertainment by their manœuvres. One would approach at first warily through the shrub oaks, running over the snow-crust by fits and starts like a leaf blown by the wind, now a few paces this way, with wonderful speed and waste of energy, making inconceivable haste with his "trotters," as if it were for a wager, and now as many paces that way, but never getting on more than half a rod at a time; and then suddenly pausing with a ludicrous expression and a gratuitous somerset, as if all the eyes in the universe were fixed on him, — for all the motions of a squirrel, even in the most solitary recesses of the forest, imply spectators as much as those of a dancing girl, — wasting more time in delay and circumspection than would have sufficed to walk the whole distance, — I never saw one walk, — and then suddenly, before you could say Jack Robinson, he would be in the top of a young pitch pine, winding up his clock and chiding all imaginary spectators, soliloquizing and talking to all the universe at the same time, — for no reason that I could ever detect, or he himself was aware of, I suspect. At length he would reach the corn, and selecting a suitable ear, frisk about in the same uncertain trigonometrical way to the topmost stick of my wood-pile, before my window, where he looked me in the face, and there sit for hours, supplying himself with a new ear from time

to time, nibbling at first voraciously and throwing the half-naked cobs about; till at length he grew more dainty still and played with his food, tasting only the inside of the kernel, and the ear, which was held balanced over the stick by one paw, slipped from his careless grasp and fell to the ground, when he would look over at it with a ludicrous expression of uncertainty, as if suspecting that it had life, with a mind not made up whether to get it again, or a new one, or be off; now thinking of corn, then listening to hear what was in the wind. So the little impudent fellow would waste many an ear in a forenoon; till at last, seizing some longer and plumper one, considerably bigger than himself, and skilfully balancing it, he would set out with it to the woods, like a tiger with a buffalo, by the same zigzag course and frequent pauses, scratching along with it as if it were too heavy for him and falling all the while, making its fall a diagonal between a perpendicular and horizontal, being determined to put it through at any rate; — a singularly frivolous and whimsical fellow; — and so he would get off with it to where he lived, perhaps carry it to the top of a pine tree forty or fifty rods distant, and I would afterwards find the cobs strewn about the woods in various directions.

At length the jays arrive, whose discordant screams were heard long before, as they were warily making their approach an eighth of a mile off, and in a stealthy and sneaking manner they flit from tree to tree, nearer and nearer, and pick up the kernels which the squirrels have dropped. Then, sitting on a pitch pine bough, they attempt to swallow in their haste a kernel which is too

big for their throats and chokes them; and after great labor they disgorge it, and spend an hour in the endeavor to crack it by repeated blows with their bills. They were manifestly thieves, and I had not much respect for them; but the squirrels, though at first shy, went to work as if they were taking what was their own.

Meanwhile also came the chickadees in flocks, which, picking up the crumbs the squirrels had dropped, flew to the nearest twig, and, placing them under their claws, hammered away at them with their little bills, as if it were an insect in the bark, till they were sufficiently reduced for their slender throats. A little flock of these titmice came daily to pick a dinner out of my wood-pile, or the crumbs at my door, with faint flitting lisping notes, like the tinkling of icicles in the grass, or else with sprightly *day day day*, or more rarely, in springlike days, a wiry summery *phe-be* from the woodside. They were so familiar that at length one alighted on an armful of wood which I was carrying in, and pecked at the sticks without fear. I once had a sparrow alight upon my shoulder for a moment while I was hoeing in a village garden, and I felt that I was more distinguished by that circumstance than I should have been by any epaulet I could have worn. The squirrels also grew at last to be quite familiar, and occasionally stepped upon my shoe, when that was the nearest way.

When the ground was not yet quite covered, and again near the end of winter, when the snow was melted on my south hillside and about my wood-pile, the partridges came out of the woods morning and evening to feed

there. Whichever side you walk in the woods the partridge bursts away on whirring wings, jarring the snow from the dry leaves and twigs on high, which comes sifting down in the sunbeams like golden dust, for this brave bird is not to be scared by winter. It is frequently covered up by drifts, and, it is said, "sometimes plunges from on wing into the soft snow, where it remains concealed for a day or two." I used to start them in the open land also, where they had come out of the woods at sunset to "bud" the wild apple trees. They will come regularly every evening to particular trees, where the cunning sportsman lies in wait for them, and the distant orchards next the woods suffer thus not a little. I am glad that the partridge gets fed, at any rate. It is Nature's own bird which lives on buds and diet-drink.

In dark winter mornings, or in short winter afternoons, I sometimes heard a pack of hounds threading all the woods with hounding cry and yelp, unable to resist the instinct of the chase, and the note of the hunting-horn at intervals, proving that man was in the rear. The woods ring again, and yet no fox bursts forth on to the open level of the pond, nor following pack pursuing their Actæon. And perhaps at evening I see the hunters returning with a single brush trailing from their sleigh for a trophy, seeking their inn. They tell me that if the fox would remain in the bosom of the frozen earth he would be safe, or if he would run in a straight line away no foxhound could overtake him; but, having left his pursuers far behind, he stops to rest and listen till they come up, and when he runs he circles round to his old haunts,

where the hunters await him. Sometimes, however, he will run upon a wall many rods, and then leap off far to one side, and he appears to know that water will not retain his scent. A hunter told me that he once saw a fox pursued by hounds burst out on to Walden when the ice was covered with shallow puddles, run part way across, and then return to the same shore. Ere long the hounds arrived, but here they lost the scent. Sometimes a pack hunting by themselves would pass my door, and circle round my house, and yelp and hound without regarding me, as if afflicted by a species of madness, so that nothing could divert them from the pursuit. Thus they circle until they fall upon the recent trail of a fox, for a wise hound will forsake everything else for this. One day a man came to my hut from Lexington to inquire after his hound that made a large track, and had been hunting for a week by himself. But I fear that he was not the wiser for all I told him, for every time I attempted to answer his questions he interrupted me by asking, "What do you do here?" He had lost a dog, but found a man.

One old hunter who has a dry tongue, who used to come to bathe in Walden once every year when the water was warmest, and at such times looked in upon me, told me that many years ago he took his gun one afternoon and went out for a cruise in Walden Wood; and as he walked the Wayland road he heard the cry of hounds approaching, and ere long a fox leaped the wall into the road, and as quick as thought leaped the other wall out of the road, and his swift bullet had not touched him. Some way behind came an old hound and her

three pups in full pursuit, hunting on their own account, and disappeared again in the woods. Late in the afternoon, as he was resting in the thick woods south of Walden, he heard the voice of the hounds far over toward Fair Haven still pursuing the fox; and on they came, their hounding cry which made all the woods ring sounding nearer and nearer, now from Well Meadow, now from the Baker Farm. For a long time he stood still and listened to their music, so sweet to a hunter's ear, when suddenly the fox appeared, threading the solemn aisles with an easy coursing pace, whose sound was concealed by a sympathetic rustle of the leaves, swift and still, keeping the ground, leaving his pursuers far behind; and, leaping upon a rock amid the woods, he sat erect and listening, with his back to the hunter. For a moment compassion restrained the latter's arm; but that was a short-lived mood, and as quick as thought can follow thought his piece was levelled, and *whang!* — the fox, rolling over the rock, lay dead on the ground. The hunter still kept his place and listened to the hounds. Still on they came, and now the near woods resounded through all their aisles with their demoniac cry. At length the old hound burst into view with muzzle to the ground, and snapping the air as if possessed, and ran directly to the rock; but, spying the dead fox, she suddenly ceased her hounding, as if struck dumb with amazement, and walked round and round him in silence; and one by one her pups arrived, and, like their mother, were sobered into silence by the mystery. Then the hunter came forward and stood in their midst, and the mystery was solved. They waited in silence while he skinned

the fox, then followed the brush a while, and at length turned off into the woods again. That evening a Weston squire came to the Concord hunter's cottage to inquire for his hounds, and told how for a week they had been hunting on their own account from Weston woods. The Concord hunter told him what he knew and offered him the skin; but the other declined it and departed. He did not find his hounds that night, but the next day learned that they had crossed the river and put up at a farmhouse for the night, whence, having been well fed, they took their departure early in the morning.

The hunter who told me this could remember one Sam Nutting, who used to hunt bears on Fair Haven Ledges, and exchange their skins for rum in Concord village; who told him, even, that he had seen a moose there. Nutting had a famous foxhound named Burgoyne, — he pronounced it Bugine, — which my informant used to borrow. In the "Wast Book" of an old trader of this town, who was also a captain, town-clerk, and representative, I find the following entry. Jan. 18th, 1742-3, "John Melven Cr. by 1 Grey Fox 0 — 2 — 3;" they are not now found here; and in his ledger, Feb. 7th, 1743, Hezekiah Stratton has credit "by $\frac{1}{2}$ a Catt skin 0 — 1 — $4\frac{1}{2}$;" of course, a wild-cat, for Stratton was a sergeant in the old French war, and would not have got credit for hunting less noble game. Credit is given for deerskins also, and they were daily sold. One man still preserves the horns of the last deer that was killed in this vicinity, and another has told me the particulars of the hunt in which his uncle was engaged. The hunters were formerly a numerous and merry crew here. I remember

well one gaunt Nimrod who would catch up a leaf by the roadside and play a strain on it wilder and more melodious, if my memory serves me, than any hunting-horn.

At midnight, when there was a moon, I sometimes met with hounds in my path prowling about the woods, which would skulk out of my way, as if afraid, and stand silent amid the bushes till I had passed.

Squirrels and wild mice disputed for my store of nuts. There were scores of pitch pines around my house, from one to four inches in diameter, which had been gnawed by mice the previous winter, — a Norwegian winter for them, for the snow lay long and deep, and they were obliged to mix a large proportion of pine bark with their other diet. These trees were alive and apparently flourishing at midsummer, and many of them had grown a foot, though completely girdled; but after another winter such were without exception dead. It is remarkable that a single mouse should thus be allowed a whole pine tree for its dinner, gnawing round instead of up and down it; but perhaps it is necessary in order to thin these trees, which are wont to grow up densely.

The hares (*Lepus Americanus*) were very familiar. One had her form under my house all winter, separated from me only by the flooring, and she startled me each morning by her hasty departure when I began to stir, — thump, thump, thump, striking her head against the floor timbers in her hurry. They used to come round my door at dusk to nibble the potato parings which I had thrown out, and were so nearly the color of the ground that they could hardly be distinguished when still. Some-

times in the twilight I alternately lost and recovered sight of one sitting motionless under my window. When I opened my door in the evening, off they would go with a squeak and a bounce. Near at hand they only excited my pity. One evening one sat by my door two paces from me, at first trembling with fear, yet unwilling to move; a poor wee thing, lean and bony, with ragged ears and sharp nose, scant tail and slender paws. It looked as if Nature no longer contained the breed of nobler bloods, but stood on her last toes. Its large eyes appeared young and unhealthy, almost dropsical. I took a step, and lo, away it scud with an elastic spring over the snow-crust, straightening its body and its limbs into graceful length, and soon put the forest between me and itself, — the wild free venison, asserting its vigor and the dignity of Nature. Not without reason was its slenderness. Such then was its nature. (*Lepus, levipes*, light-foot, some think.)

What is a country without rabbits and partridges? They are among the most simple and indigenous animal products; ancient and venerable families known to antiquity as to modern times; of the very hue and substance of Nature, nearest allied to leaves and to the ground, — and to one another; it is either winged or it is legged. It is hardly as if you had seen a wild creature when a rabbit or a partridge bursts away, only a natural one, as much to be expected as rustling leaves. The partridge and the rabbit are still sure to thrive, like true natives of the soil, whatever revolutions occur. If the forest is cut off, the sprouts and bushes which spring up afford them concealment, and they become more numerous

than ever. That must be a poor country indeed that does not support a hare. Our woods teem with them both, and around every swamp may be seen the partridge or rabbit walk, beset with twiggy fences and horse-hair snares, which some cow-boy tends.

THE POND IN WINTER

AFTER a still winter night I awoke with the impression that some question had been put to me, which I had been endeavoring in vain to answer in my sleep, as what — how — when — where? But there was dawning Nature, in whom all creatures live, looking in at my broad windows with serene and satisfied face, and no question on *her* lips. I awoke to an answered question, to Nature and daylight. The snow lying deep on the earth dotted with young pines, and the very slope of the hill on which my house is placed, seemed to say, Forward! Nature puts no question and answers none which we mortals ask. She has long ago taken her resolution. “O Prince, our eyes contemplate with admiration and transmit to the soul the wonderful and varied spectacle of this universe. The night veils without doubt a part of this glorious creation; but day comes to reveal to us this great work, which extends from earth even into the plains of the ether.”

Then to my morning work. First I take an axe and pail and go in search of water, if that be not a dream. After a cold and snowy night it needed a divining-rod to find it. Every winter the liquid and trembling surface of the pond, which was so sensitive to every breath, and reflected every light and shadow, becomes solid to the depth

of a foot or a foot and a half, so that it will support the heaviest teams, and perchance the snow covers it to an equal depth, and it is not to be distinguished from any level field. Like the marmots in the surrounding hills, it closes its eyelids and becomes dormant for three months or more. Standing on the snow-covered plain, as if in a pasture amid the hills, I cut my way first through a foot of snow, and then a foot of ice, and open a window under my feet, where, kneeling to drink, I look down into the quiet parlor of the fishes, pervaded by a softened light as through a window of ground glass, with its bright sanded floor the same as in summer; there a perennial waveless serenity reigns as in the amber twilight sky, corresponding to the cool and even temperament of the inhabitants. Heaven is under our feet as well as over our heads.

Early in the morning, while all things are crisp with frost, men come with fishing-reels and slender lunch, and let down their fine lines through the snowy field to take pickerel and perch; wild men, who instinctively follow other fashions and trust other authorities than their townsmen, and by their goings and comings stitch towns together in parts where else they would be ripped. They sit and eat their luncheon in stout fear-naughts on the dry oak leaves on the shore, as wise in natural lore as the citizen is in artificial. They never consulted with books, and know and can tell much less than they have done. The things which they practice are said not yet to be known. Here is one fishing for pickerel with grown perch for bait. You look into his pail with wonder as into a summer pond, as if he kept summer locked up at home,

or knew where she had retreated. How, pray, did he get these in midwinter? Oh, he got worms out of rotten logs since the ground froze, and so he caught them. His life itself passes deeper in nature than the studies of the naturalist penetrate; himself a subject for the naturalist. The latter raises the moss and bark gently with his knife in search of insects; the former lays open logs to their core with his axe, and moss and bark fly far and wide. He gets his living by barking trees. Such a man has some right to fish, and I love to see nature carried out in him. The perch swallows the grub-worm, the pickerel swallows the perch, and the fisherman swallows the pickerel; and so all the chinks in the scale of being are filled.

When I strolled around the pond in misty weather I was sometimes amused by the primitive mode which some ruder fisherman had adopted. He would perhaps have placed alder branches over the narrow holes in the ice, which were four or five rods apart and an equal distance from the shore, and having fastened the end of the line to a stick to prevent its being pulled through, have passed the slack line over a twig of the alder, a foot or more above the ice, and tied a dry oak leaf to it, which, being pulled down, would show when he had a bite. These alders loomed through the mist at regular intervals as you walked half way round the pond.

Ah, the pickerel of Walden! when I see them lying on the ice, or in the well which the fisherman cuts in the ice, making a little hole to admit the water, I am always surprised by their rare beauty, as if they were fabulous fishes, they are so foreign to the streets, even to the

woods, foreign as Arabia to our Concord life. They possess a quite dazzling and transcendent beauty which separates them by a wide interval from the cadaverous cod and haddock whose fame is trumpeted in our streets. They are not green like the pines, nor gray like the stones, nor blue like the sky; but they have, to my eyes, if possible, yet rarer colors, like flowers and precious stones, as if they were the pearls, the animalized *nuclei* or crystals of the Walden water. They, of course, are Walden all over and all through; are themselves small Waldens in the animal kingdom, Waldenses. It is surprising that they are caught here, — that in this deep and capacious spring, far beneath the rattling teams and chaises and tinkling sleighs that travel the Walden road, this great gold and emerald fish swims. I never chanced to see its kind in any market; it would be the cynosure of all eyes there. Easily, with a few convulsive quirks, they give up their watery ghosts, like a mortal translated before his time to the thin air of heaven.

As I was desirous to recover the long lost bottom of Walden Pond, I surveyed it carefully, before the ice broke up, early in '46, with compass and chain and sounding line. There have been many stories told about the bottom, or rather no bottom, of this pond, which certainly had no foundation for themselves. It is remarkable how long men will believe in the bottomlessness of a pond without taking the trouble to sound it. I have visited two such Bottomless Ponds in one walk in this neighborhood. Many have believed that Walden reached quite through to the other side of the globe.

Some who have lain flat on the ice for a long time, looking down through the illusive medium, perchance with watery eyes into the bargain, and driven to hasty conclusions by the fear of catching cold in their breasts, have seen vast holes "into which a load of hay might be driven," if there were anybody to drive it, the undoubted source of the Styx and entrance to the Infernal Regions from these parts. Others have gone down from the village with a "fifty-six" and a wagon load of inch rope, but yet have failed to find any bottom; for while the "fifty-six" was resting by the way, they were paying out the rope in the vain attempt to fathom their truly immeasurable capacity for marvellousness. But I can assure my readers that Walden has a reasonably tight bottom at a not unreasonable, though at an unusual, depth. I fathomed it easily with a cod-line and a stone weighing about a pound and a half, and could tell accurately when the stone left the bottom, by having to pull so much harder before the water got underneath to help me. The greatest depth was exactly one hundred and two feet; to which may be added the five feet which it has risen since, making one hundred and seven. This is a remarkable depth for so small an area; yet not an inch of it can be spared by the imagination. What if all ponds were shallow? Would it not react on the minds of men? I am thankful that this pond was made deep and pure for a symbol. While men believe in the infinite some ponds will be thought to be bottomless.

A factory-owner, hearing what depth I had found, thought that it could not be true, for, judging from his acquaintance with dams, sand would not lie at so steep an

angle. But the deepest ponds are not so deep in proportion to their area as most suppose, and, if drained, would not leave very remarkable valleys. They are not like cups between the hills; for this one, which is so unusually deep for its area, appears in a vertical section through its centre not deeper than a shallow plate. Most ponds, emptied, would leave a meadow no more hollow than we frequently see. William Gilpin, who is so admirable in all that relates to landscapes, and usually so correct, standing at the head of Loch Fyne, in Scotland, which he describes as "a bay of salt water, sixty or seventy fathoms deep, four miles in breadth," and about fifty miles long, surrounded by mountains, observes, "If we could have seen it immediately after the diluvian crash, or whatever convulsion of nature occasioned it, before the waters gushed in, what a horrid chasm must it have appeared!

"So high as heaved the tumid hills, so low
Down sunk a hollow bottom broad and deep,
Capacious bed of waters."

But if, using the shortest diameter of Loch Fyne, we apply these proportions to Walden, which, as we have seen, appears already in a vertical section only like a shallow plate, it will appear four times as shallow. So much for the *increased* horrors of the chasm of Loch Fyne when emptied. No doubt many a smiling valley with its stretching cornfields occupies exactly such a "horrid chasm," from which the waters have receded, though it requires the insight and the far sight of the geologist to convince the unsuspecting inhabitants of this fact. Often an inquisitive eye may detect the shores

of a primitive lake in the low horizon hills, and no subsequent elevation of the plain have been necessary to conceal their history. But it is easiest, as they who work on the highways know, to find the hollows by the puddles after a shower. The amount of it is, the imagination, give it the least license, dives deeper and soars higher than Nature goes. So, probably, the depth of the ocean will be found to be very inconsiderable compared with its breadth.

As I sounded through the ice I could determine the shape of the bottom with greater accuracy than is possible in surveying harbors which do not freeze over, and I was surprised at its general regularity. In the deepest part there are several acres more level than almost any field which is exposed to the sun, wind, and plow. In one instance, on a line arbitrarily chosen, the depth did not vary more than one foot in thirty rods; and generally, near the middle, I could calculate the variation for each one hundred feet in any direction beforehand within three or four inches. Some are accustomed to speak of deep and dangerous holes even in quiet sandy ponds like this, but the effect of water under these circumstances is to level all inequalities. The regularity of the bottom and its conformity to the shores and the range of the neighboring hills were so perfect that a distant promontory betrayed itself in the soundings quite across the pond, and its direction could be determined by observing the opposite shore. Cape becomes bar, and plain shoal, and valley and gorge deep water and channel.

When I had mapped the pond by the scale of ten

rods to an inch, and put down the soundings, more than a hundred in all, I observed this remarkable coincidence. Having noticed that the number indicating the greatest depth was apparently in the centre of the map, I laid a rule on the map lengthwise, and then breadthwise, and found, to my surprise, that the line of greatest length intersected the line of greatest breadth *exactly* at the point of greatest depth, notwithstanding that the middle is so nearly level, the outline of the pond far from regular, and the extreme length and breadth were got by measuring into the coves; and I said to myself, Who knows but this hint would conduct to the deepest part of the ocean as well as of a pond or puddle? Is not this the rule also for the height of mountains, regarded as the opposite of valleys? We know that a hill is not highest at its narrowest part.

Of five coves, three, or all which had been sounded, were observed to have a bar quite across their mouths and deeper water within, so that the bay tended to be an expansion of water within the land not only horizontally but vertically, and to form a basin or independent pond, the direction of the two capes showing the course of the bar. Every harbor on the sea-coast, also, has its bar at its entrance. In proportion as the mouth of the cove was wider compared with its length, the water over the bar was deeper compared with that in the basin. Given, then, the length and breadth of the cove, and the character of the surrounding shore, and you have almost elements enough to make out a formula for all cases.

In order to see how nearly I could guess, with this

experience, at the deepest point in a pond, by observing the outlines of its surface and the character of its shores alone, I made a plan of White Pond, which contains about forty-one acres, and, like this, has no island in it, nor any visible inlet or outlet; and as the line of greatest breadth fell very near the line of least breadth, where two opposite capes approached each other and two opposite bays receded, I ventured to mark a point a short distance from the latter line, but still on the line of greatest length, as the deepest. The deepest part was found to be within one hundred feet of this, still farther in the direction to which I had inclined, and was only one foot deeper, namely, sixty feet. Of course, a stream running through, or an island in the pond, would make the problem much more complicated.

If we knew all the laws of Nature, we should need only one fact, or the description of one actual phenomenon, to infer all the particular results at that point. Now we know only a few laws, and our result is vitiated, not, of course, by any confusion or irregularity in Nature, but by our ignorance of essential elements in the calculation. Our notions of law and harmony are commonly confined to those instances which we detect; but the harmony which results from a far greater number of seemingly conflicting, but really concurring, laws, which we have not detected, is still more wonderful. The particular laws are as our points of view, as, to the traveller, a mountain outline varies with every step, and it has an infinite number of profiles, though absolutely but one form. Even when cleft or bored through it is not comprehended in its entirety.

What I have observed of the pond is no less true in ethics. It is the law of average. Such a rule of the two diameters not only guides us toward the sun in the system and the heart in man, but draw lines through the length and breadth of the aggregate of a man's particular daily behaviors and waves of life into his coves and inlets, and where they intersect will be the height or depth of his character. Perhaps we need only to know how his shores trend and his adjacent country or circumstances, to infer his depth and concealed bottom. If he is surrounded by mountainous circumstances, an Achillean shore, whose peaks overshadow and are reflected in his bosom, they suggest a corresponding depth in him. But a low and smooth shore proves him shallow on that side. In our bodies, a bold projecting brow falls off to and indicates a corresponding depth of thought. Also there is a bar across the entrance of our every cove, or particular inclination ; each is our harbor for a season, in which we are detained and partially land-locked. These inclinations are not whimsical usually, but their form, size, and direction are determined by the promontories of the shore, the ancient axes of elevation. When this bar is gradually increased by storms, tides, or currents, or there is a subsidence of the waters, so that it reaches to the surface, that which was at first but an inclination in the shore in which a thought was harbored becomes an individual lake, cut off from the ocean, wherein the thought secures its own conditions, — changes, perhaps, from salt to fresh, becomes a sweet sea, dead sea, or a marsh. At the advent of each individual into this

life, may we not suppose that such a bar has risen to the surface somewhere? It is true, we are such poor navigators that our thoughts, for the most part, stand off and on upon a harborless coast, are conversant only with the bights of the bays of poesy, or steer for the public ports of entry, and go into the dry docks of science, where they merely refit for this world, and no natural currents concur to individualize them.

As for the inlet or outlet of Walden, I have not discovered any but rain and snow and evaporation, though perhaps, with a thermometer and a line, such places may be found, for where the water flows into the pond it will probably be coldest in summer and warmest in winter. When the ice-men were at work here in '46-7, the cakes sent to the shore were one day rejected by those who were stacking them up there, not being thick enough to lie side by side with the rest; and the cutters thus discovered that the ice over a small space was two or three inches thinner than elsewhere, which made them think that there was an inlet there. They also showed me in another place what they thought was a "leach-hole," through which the pond leaked out under a hill into a neighboring meadow, pushing me out on a cake of ice to see it. It was a small cavity under ten feet of water; but I think that I can warrant the pond not to need soldering till they find a worse leak than that. One has suggested, that if such a "leach-hole" should be found, its connection with the meadow, if any existed, might be proved by conveying some colored powder or sawdust to the mouth of the hole, and then putting a strainer over the spring in the meadow, which

would catch some of the particles carried through by the current.

While I was surveying, the ice, which was sixteen inches thick, undulated under a slight wind like water. It is well known that a level cannot be used on ice. At one rod from the shore its greatest fluctuation, when observed by means of a level on land directed toward a graduated staff on the ice, was three quarters of an inch, though the ice appeared firmly attached to the shore. It was probably greater in the middle. Who knows but if our instruments were delicate enough we might detect an undulation in the crust of the earth? When two legs of my level were on the shore and the third on the ice, and the sights were directed over the latter, a rise or fall of the ice of an almost infinitesimal amount made a difference of several feet on a tree across the pond. When I began to cut holes for sounding there were three or four inches of water on the ice under a deep snow which had sunk it thus far; but the water began immediately to run into these holes, and continued to run for two days in deep streams, which wore away the ice on every side, and contributed essentially, if not mainly, to dry the surface of the pond; for, as the water ran in, it raised and floated the ice. This was somewhat like cutting a hole in the bottom of a ship to let the water out. When such holes freeze, and a rain succeeds, and finally a new freezing forms a fresh smooth ice over all, it is beautifully mottled internally by dark figures, shaped somewhat like a spider's web, what you may call ice rosettes, produced by the channels worn by the water flowing from all sides to a centre. Sometimes.

also, when the ice was covered with shallow puddles, I saw a double shadow of myself, one standing on the head of the other, one on the ice, the other on the trees or hillside.

While yet it is cold January, and snow and ice are thick and solid, the prudent landlord comes from the village to get ice to cool his summer drink; impressively, even pathetically, wise, to foresee the heat and thirst of July now in January, — wearing a thick coat and mittens ! when so many things are not provided for. It may be that he lays up no treasures in this world which will cool his summer drink in the next. He cuts and saws the solid pond, unroofs the house of fishes, and carts off their very element and air, held fast by chains and stakes like corded wood, through the favoring winter air, to wintry cellars, to underlie the summer there. It looks like solidified azure, as, far off, it is drawn through the streets. These ice-cutters are a merry race, full of jest and sport, and when I went among them they were wont to invite me to saw pit-fashion with them, I standing underneath.

In the winter of '46-7 there came a hundred men of Hyperborean extraction swoop down on to our pond one morning, with many carloads of ungainly-looking farming tools, — sleds, plows, drill-barrows, turf-knives, spades, saws, rakes, and each man was armed with a double-pointed pike-staff, such as is not described in the New-England Farmer or the Cultivator. I did not know whether they had come to sow a crop of winter rye, or some other kind of grain recently intro-

duced from Iceland. As I saw no manure, I judged that they meant to skim the land, as I had done, thinking the soil was deep and had lain fallow long enough. They said that a gentleman farmer, who was behind the scenes, wanted to double his money, which, as I understood, amounted to half a million already; but in order to cover each one of his dollars with another, he took off the only coat, ay, the skin itself, of Walden Pond in the midst of a hard winter. They went to work at once, plowing, harrowing, rolling, furrowing, in admirable order, as if they were bent on making this a model farm; but when I was looking sharp to see what kind of seed they dropped into the furrow, a gang of fellows by my side suddenly began to hook up the virgin mould itself, with a peculiar jerk, clean down to the sand, or rather the water, — for it was a very springy soil, — indeed all the *terra firma* there was, — and haul it away on sleds, and then I guessed that they must be cutting peat in a bog. So they came and went every day, with a peculiar shriek from the locomotive, from and to some point of the polar regions, as it seemed to me, like a flock of arctic snowbirds. But sometimes Squaw Walden had her revenge, and a hired man, walking behind his team, slipped through a crack in the ground down toward Tartarus, and he who was so brave before suddenly became but the ninth part of a man, almost gave up his animal heat, and was glad to take refuge in my house, and acknowledged that there was some virtue in a stove; or sometimes the frozen soil took a piece of steel out of a plowshare, or a plow got set in the furrow and had to be cut out.

To speak literally, a hundred Irishmen, with Yankee overseers, came from Cambridge every day to get out the ice. They divided it into cakes by methods too well known to require description, and these, being sledged to the shore, were rapidly hauled off on to an ice platform, and raised by grappling irons and block and tackle, worked by horses, on to a stack, as surely as so many barrels of flour, and there placed evenly side by side, and row upon row, as if they formed the solid base of an obelisk designed to pierce the clouds. They told me that in a good day they could get out a thousand tons, which was the yield of about one acre. Deep ruts and "cradle-holes" were worn in the ice, as on *terra firma*, by the passage of the sleds over the same track, and the horses invariably ate their oats out of cakes of ice hollowed out like buckets. They stacked up the cakes thus in the open air in a pile thirty-five feet high on one side and six or seven rods square, putting hay between the outside layers to exclude the air; for when the wind, though never so cold, finds a passage through, it will wear large cavities, leaving slight supports or studs only here and there, and finally topple it down. At first it looked like a vast blue fort or Valhalla; but when they began to tuck the coarse meadow hay into the crevices, and this became covered with rime and icicles, it looked like a venerable moss-grown and hoary ruin, built of azure-tinted marble, the abode of Winter, that old man we see in the almanac, — his shanty, as if he had a design to estivate with us. They calculated that not twenty-five per cent. of this would reach its destination, and that two or three per cent. would be

wasted in the cars. However, a still greater part of this heap had a different destiny from what was intended; for, either because the ice was found not to keep so well as was expected, containing more air than usual, or for some other reason, it never got to market. This heap, made in the winter of '46-7 and estimated to contain ten thousand tons, was finally covered with hay and boards; and though it was unroofed the following July, and a part of it carried off, the rest remaining exposed to the sun, it stood over that summer and the next winter, and was not quite melted till September, 1848. Thus the pond recovered the greater part.

Like the water, the Walden ice, seen near at hand, has a green tint, but at a distance is beautifully blue, and you can easily tell it from the white ice of the river, or the merely greenish ice of some ponds, a quarter of a mile off. Sometimes one of those great cakes slips from the ice-man's sled into the village street, and lies there for a week like a great emerald, an object of interest to all passers. I have noticed that a portion of Walden which in the state of water was green will often, when frozen, appear from the same point of view blue. So the hollows about this pond will, sometimes, in the winter, be filled with a greenish water somewhat like its own, but the next day will have frozen blue. Perhaps the blue color of water and ice is due to the light and air they contain, and the most transparent is the bluest. Ice is an interesting subject for contemplation. They told me that they had some in the ice-houses at Fresh Pond five years old which was as good as ever. Why is it that a bucket of water soon becomes putrid, but

frozen remains sweet forever? It is commonly said that this is the difference between the affections and the intellect.

Thus for sixteen days I saw from my window a hundred men at work like busy husbandmen, with teams and horses and apparently all the implements of farming, such a picture as we see on the first page of the almanac; and as often as I looked out I was reminded of the fable of the lark and the reapers, or the parable of the sower, and the like; and now they are all gone, and in thirty days more, probably, I shall look from the same window on the pure sea-green Walden water there, reflecting the clouds and the trees, and sending up its evaporations in solitude, and no traces will appear that a man has ever stood there. Perhaps I shall hear a solitary loon laugh as he dives and plumes himself, or shall see a lonely fisher in his boat, like a floating leaf, beholding his form reflected in the waves, where lately a hundred men securely labored.

Thus it appears that the sweltering inhabitants of Charleston and New Orleans, of Madras and Bombay and Calcutta, drink at my well. In the morning I bathe my intellect in the stupendous and cosmogonical philosophy of the Bhagvat-Geeta, since whose composition years of the gods have elapsed, and in comparison with which our modern world and its literature seem puny and trivial; and I doubt if that philosophy is not to be referred to a previous state of existence, so remote is its sublimity from our conceptions. I lay down the book and go to my well for water, and lo! there I meet the servant of the Bramin, priest of Brahma and Vishnu and

Indra, who still sits in his temple on the Ganges reading the Vedas, or dwells at the root of a tree with his crust and water jug. I meet his servant come to draw water for his master, and our buckets as it were grate together in the same well. The pure Walden water is mingled with the sacred water of the Ganges. With favoring winds it is wafted past the site of the fabulous islands of Atlantis and the Hesperides, makes the periplus of Hanno, and, floating by Ternate and Tidore and the mouth of the Persian Gulf, melts in the tropic gales of the Indian seas, and is landed in ports of which Alexander only heard the names.

XVII

SPRING

THE opening of large tracts by the ice-cutters commonly causes a pond to break up earlier; for the water, agitated by the wind, even in cold weather, wears away the surrounding ice. But such was not the effect on Walden that year, for she had soon got a thick new garment to take the place of the old. This pond never breaks up so soon as the others in this neighborhood, on account both of its greater depth and its having no stream passing through it to melt or wear away the ice. I never knew it to open in the course of a winter, not excepting that of '52-3, which gave the ponds so severe a trial. It commonly opens about the first of April, a week or ten days later than Flint's Pond and Fair Haven, beginning to melt on the north side and in the shallower parts where it began to freeze. It indicates better than any water hereabouts the absolute progress of the season, being least affected by transient changes of temperature. A severe cold of a few days' duration in March may very much retard the opening of the former ponds, while the temperature of Walden increases almost uninterruptedly. A thermometer thrust into the middle of Walden on the 6th of March, 1847, stood at 32°, or freezing point; near the shore at 33°; in the middle of Flint's Pond, the same day, at 32½°;

at a dozen rods from the shore, in shallow water, under ice a foot thick, at 36° . This difference of three and a half degrees between the temperature of the deep water and the shallow in the latter pond, and the fact that a great proportion of it is comparatively shallow, show why it should break up so much sooner than Walden. The ice in the shallowest part was at this time several inches thinner than in the middle. In midwinter the middle had been the warmest and the ice thinnest there. So, also, every one who has waded about the shores of a pond in summer must have perceived how much warmer the water is close to the shore, where only three or four inches deep, than a little distance out, and on the surface where it is deep, than near the bottom. In spring the sun not only exerts an influence through the increased temperature of the air and earth, but its heat passes through ice a foot or more thick, and is reflected from the bottom in shallow water, and so also warms the water and melts the under side of the ice, at the same time that it is melting it more directly above, making it uneven, and causing the air bubbles which it contains to extend themselves upward and downward until it is completely honeycombed, and at last disappears suddenly in a single spring rain. Ice has its grain as well as wood, and when a cake begins to rot or "comb," that is, assume the appearance of honeycomb, whatever may be its position, the air cells are at right angles with what was the water surface. Where there is a rock or a log rising near to the surface the ice over it is much thinner, and is frequently quite dissolved by this reflected heat; and I have been told that in the

experiment at Cambridge to freeze water in a shallow wooden pond, though the cold air circulated underneath, and so had access to both sides, the reflection of the sun from the bottom more than counterbalanced this advantage. When a warm rain in the middle of the winter melts off the snow ice from Walden, and leaves a hard dark or transparent ice on the middle, there will be a strip of rotten though thicker white ice, a rod or more wide, about the shores, created by this reflected heat. Also, as I have said, the bubbles themselves within the ice operate as burning-glasses to melt the ice beneath.

The phenomena of the year take place every day in a pond on a small scale. Every morning, generally speaking, the shallow water is being warmed more rapidly than the deep, though it may not be made so warm after all, and every evening it is being cooled more rapidly until the morning. The day is an epitome of the year. The night is the winter, the morning and evening are the spring and fall, and the noon is the summer. The cracking and booming of the ice indicate a change of temperature. One pleasant morning after a cold night, February 24th, 1850, having gone to Flint's Pond to spend the day, I noticed with surprise, that when I struck the ice with the head of my axe, it resounded like a gong for many rods around, or as if I had struck on a tight drum-head. The pond began to boom about an hour after sunrise, when it felt the influence of the sun's rays slanted upon it from over the hills; it stretched itself and yawned like a waking man with a gradually increasing tumult, which was kept up three or four hours. It took a short siesta at noon, and boomed once

more toward night, as the sun was withdrawing his influence. In the right stage of the weather a pond fires its evening gun with great regularity. But in the middle of the day, being full of cracks, and the air also being less elastic, it had completely lost its resonance, and probably fishes and muskrats could not then have been stunned by a blow on it. The fishermen say that the "thundering of the pond" scares the fishes and prevents their biting. The pond does not thunder every evening, and I cannot tell surely when to expect its thundering; but though I may perceive no difference in the weather, it does. Who would have suspected so large and cold and thick-skinned a thing to be so sensitive? Yet it has its law to which it thunders obedience when it should as surely as the buds expand in the spring. The earth is all alive and covered with papillæ. The largest pond is as sensitive to atmospheric changes as the globule of mercury in its tube.

One attraction in coming to the woods to live was that I should have leisure and opportunity to see the Spring come in. The ice in the pond at length begins to be honeycombed, and I can set my heel in it as I walk. Fogs and rains and warmer suns are gradually melting the snow; the days have grown sensibly longer; and I see how I shall get through the winter without adding to my wood-pile, for large fires are no longer necessary. I am on the alert for the first signs of spring, to hear the chance note of some arriving bird, or the striped squirrel's chirp, for his stores must be now nearly exhausted, or see the woodchuck venture out of his winter quarters. On the 13th of March, after I had

heard the bluebird, song sparrow, and red-wing, the ice was still nearly a foot thick. As the weather grew warmer it was not sensibly worn away by the water, nor broken up and floated off as in rivers, but, though it was completely melted for half a rod in width about the shore, the middle was merely honeycombed and saturated with water, so that you could put your foot through it when six inches thick; but by the next day evening, perhaps, after a warm rain followed by fog, it would have wholly disappeared, all gone off with the fog, spirited away. One year I went across the middle only five days before it disappeared entirely. In 1845 Walden was first completely open on the 1st of April; in '46, the 25th of March; in '47, the 8th of April; in '51, the 28th of March; in '52, the 18th of April; in '53, the 23d of March; in '54, about the 7th of April.

Every incident connected with the breaking up of the rivers and ponds and the settling of the weather is particularly interesting to us who live in a climate of so great extremes. When the warmer days come, they who dwell near the river hear the ice crack at night with a startling whoop as loud as artillery, as if its icy fetters were rent from end to end, and within a few days see it rapidly going out. So the alligator comes out of the mud with quakings of the earth. One old man, who has been a close observer of Nature, and seems as thoroughly wise in regard to all her operations as if she had been put upon the stocks when he was a boy, and he had helped to lay her keel, — who has come to his growth, and can hardly acquire more of natural lore if he should live to the age of Methuselah, — told me —

and I was surprised to hear him express wonder at any of Nature's operations, for I thought that there were no secrets between them—that one spring day he took his gun and boat, and thought that he would have a little sport with the ducks. There was ice still on the meadows, but it was all gone out of the river, and he dropped down without obstruction from Sudbury, where he lived, to Fair Haven Pond, which he found, unexpectedly, covered for the most part with a firm field of ice. It was a warm day, and he was surprised to see so great a body of ice remaining. Not seeing any ducks, he hid his boat on the north or back side of an island in the pond, and then concealed himself in the bushes on the south side, to await them. The ice was melted for three or four rods from the shore, and there was a smooth and warm sheet of water, with a muddy bottom, such as the ducks love, within, and he thought it likely that some would be along pretty soon. After he had lain still there about an hour he heard a low and seemingly very distant sound, but singularly grand and impressive, unlike anything he had ever heard, gradually swelling and increasing as if it would have a universal and memorable ending, a sullen rush and roar, which seemed to him all at once like the sound of a vast body of fowl coming in to settle there, and, seizing his gun, he started up in haste and excited; but he found, to his surprise, that the whole body of the ice had started while he lay there, and drifted in to the shore, and the sound he had heard was made by its edge grating on the shore, — at first gently nibbled and crumbled off, but at length heaving up and scattering

its wrecks along the island to a considerable height before it came to a standstill.

At length the sun's rays have attained the right angle, and warm winds blow up mist and rain and melt the snowbanks, and the sun, dispersing the mist, smiles on a checkered landscape of russet and white smoking with incense, through which the traveller picks his way from islet to islet, cheered by the music of a thousand tinkling rills and rivulets whose veins are filled with the blood of winter which they are bearing off.

Few phenomena gave me more delight than to observe the forms which thawing sand and clay assume in flowing down the sides of a deep cut on the railroad through which I passed on my way to the village, a phenomenon not very common on so large a scale, though the number of freshly exposed banks of the right material must have been greatly multiplied since railroads were invented. The material was sand of every degree of fineness and of various rich colors, commonly mixed with a little clay. When the frost comes out in the spring, and even in a thawing day in the winter, the sand begins to flow down the slopes like lava, sometimes bursting out through the snow and overflowing it where no sand was to be seen before. Innumerable little streams overlap and interlace one with another, exhibiting a sort of hybrid product, which obeys half way the law of currents, and half way that of vegetation. As it flows it takes the forms of sappy leaves or vines, making heaps of pulpy sprays a foot or more in depth, and resembling, as you look down on them, the lacinated, lobed, and imbricated thalluses of some lichens; or you are re-

minded of coral, of leopards' paws or birds' feet, of brains or lungs or bowels, and excrements of all kinds. It is a truly *grotesque* vegetation, whose forms and color we see imitated in bronze, a sort of architectural foliage more ancient and typical than acanthus, chiccory, ivy, vine, or any vegetable leaves; destined perhaps, under some circumstances, to become a puzzle to future geologists. The whole cut impressed me as if it were a cave with its stalactites laid open to the light. The various shades of the sand are singularly rich and agreeable, embracing the different iron colors, brown, gray, yellowish, and reddish. When the flowing mass reaches the drain at the foot of the bank it spreads out flatter into *strands*, the separate streams losing their semi-cylindrical form and gradually becoming more flat and broad, running together as they are more moist, till they form an almost flat *sand*, still variously and beautifully shaded, but in which you can trace the original forms of vegetation; till at length, in the water itself, they are converted into *banks*, like those formed off the mouths of rivers, and the forms of vegetation are lost in the ripple-marks on the bottom.

The whole bank, which is from twenty to forty feet high, is sometimes overlaid with a mass of this kind of foliage, or sandy rupture, for a quarter of a mile on one or both sides, the produce of one spring day. What makes this sand foliage remarkable is its springing into existence thus suddenly. When I see on the one side the inert bank, — for the sun acts on one side first, — and on the other this luxuriant foliage, the creation of an hour, I am affected as if in a peculiar sense I stood

in the laboratory of the Artist who made the world and me, — had come to where he was still at work, sporting on this bank, and with excess of energy strewing his fresh designs about. I feel as if I were nearer to the vitals of the globe, for this sandy overflow is something such a foliaceous mass as the vitals of the animal body. You find thus in the very sands an anticipation of the vegetable leaf. No wonder that the earth expresses itself outwardly in leaves, it so labors with the idea inwardly. The atoms have already learned this law, and are pregnant by it. The overhanging leaf sees here its prototype. *Internally*, whether in the globe or animal body, it is a moist thick *lobe*, a word especially applicable to the liver and lungs and the *leaves* of fat (λείβω, *labor*, *lapsus*, to flow or slip downward, a lapsing; λοβός, *globus*, lobe, globe; also lap, flap, and many other words); *externally*, a dry thin *leaf*, even as the *f* and *v* are a pressed and dried *b*. The radicals of *lobe* are *lb*, the soft mass of the *b* (single-lobed, or B, double-lobed), with the liquid *l* behind it pressing it forward. In globe, *glb*, the guttural *g* adds to the meaning the capacity of the throat. The feathers and wings of birds are still drier and thinner leaves. Thus, also, you pass from the lumpish grub in the earth to the airy and fluttering butterfly. The very globe continually transcends and translates itself, and becomes winged in its orbit. Even ice begins with delicate crystal leaves, as if it had flowed into moulds which the fronds of water-plants have impressed on the watery mirror. The whole tree itself is but one leaf, and rivers are still vaster leaves whose pulp is intervening earth, and towns and cities are the ova of insects in their axils.

When the sun withdraws the sand ceases to flow, but in the morning the streams will start once more and branch and branch again into a myriad of others. You here see perchance how blood-vessels are formed. If you look closely you observe that first there pushes forward from the thawing mass a stream of softened sand with a drop-like point, like the ball of the finger, feeling its way slowly and blindly downward, until at last with more heat and moisture, as the sun gets higher, the most fluid portion, in its effort to obey the law to which the most inert also yields, separates from the latter and forms for itself a meandering channel or artery within that, in which is seen a little silvery stream glancing like lightning from one stage of pulpy leaves or branches to another, and ever and anon swallowed up in the sand. It is wonderful how rapidly yet perfectly the sand organizes itself as it flows, using the best material its mass affords to form the sharp edges of its channel. Such are the sources of rivers. In the silicious matter which the water deposits is perhaps the bony system, and in the still finer soil and organic matter the fleshy fibre or cellular tissue. What is man but a mass of thawing clay? The ball of the human finger is but a drop congealed. The fingers and toes flow to their extent from the thawing mass of the body. Who knows what the human body would expand and flow out to under a more genial heaven? Is not the hand a spreading *palm* leaf with its lobes and veins? The ear may be regarded, fancifully, as a lichen, *Umbilicaria*, on the side of the head, with its lobe or drop. The lip — *labium*, from *labor* (?) — laps or lapses from the sides

of the cavernous mouth. The nose is a manifest congealed drop or stalactite. The chin is a still larger drop, the confluent dripping of the face. The cheeks are a slide from the brows into the valley of the face, opposed and diffused by the cheek bones. Each rounded lobe of the vegetable leaf, too, is a thick and now loitering drop, larger or smaller; the lobes are the fingers of the leaf; and as many lobes as it has, in so many directions it tends to flow, and more heat or other genial influences would have caused it to flow yet farther.

Thus it seemed that this one hillside illustrated the principle of all the operations of Nature. The Maker of this earth but patented a leaf. What Champollion will decipher this hieroglyphic for us, that we may turn over a new leaf at last? This phenomenon is more exhilarating to me than the luxuriance and fertility of vineyards. True, it is somewhat excrementitious in its character, and there is no end to the heaps of liver, lights, and bowels, as if the globe were turned wrong side outward; but this suggests at least that Nature has some bowels, and there again is mother of humanity. This is the frost coming out of the ground; this is Spring. It precedes the green and flowery spring, as mythology precedes regular poetry. I know of nothing more purgative of winter fumes and indigestions. It convinces me that Earth is still in her swaddling-clothes, and stretches forth baby fingers on every side. Fresh curls spring from the baldest brow. There is nothing inorganic. These foliaceous heaps lie along the bank like the slag of a furnace, showing that Nature is "in full blast" within. The earth is not a mere frag-

ment of dead history, stratum upon stratum like the leaves of a book, to be studied by geologists and anti-quaries chiefly, but living poetry like the leaves of a tree, which precede flowers and fruit, — not a fossil earth, but a living earth; compared with whose great central life all animal and vegetable life is merely parasitic. Its throes will heave our exuviæ from their graves. You may melt your metals and cast them into the most beautiful moulds you can; they will never excite me like the forms which this molten earth flows out into. And not only it, but the institutions upon it are plastic like clay in the hands of the potter.

Ere long, not only on these banks, but on every hill and plain and in every hollow, the frost comes out of the ground like a dormant quadruped from its burrow, and seeks the sea with music, or migrates to other climes in clouds. Thaw with his gentle persuasion is more powerful than Thor with his hammer. The one melts, the other but breaks in pieces.

When the ground was partially bare of snow, and a few warm days had dried its surface somewhat, it was pleasant to compare the first tender signs of the infant year just peeping forth with the stately beauty of the withered vegetation which had withstood the winter, — life-everlasting, goldenrods, pinweeds, and graceful wild grasses, more obvious and interesting frequently than in summer even, as if their beauty was not ripe till then; even cotton-grass, cat-tails, mulleins, johnswort, hardhack, meadow-sweet, and other strong-stemmed plants, those unexhausted granaries which entertain the earliest birds, — decent weeds, at least, which

widowed Nature wears. I am particularly attracted by the arching and sheaf-like top of the wool-grass; it brings back the summer to our winter memories, and is among the forms which art loves to copy, and which, in the vegetable kingdom, have the same relation to types already in the mind of man that astronomy has. It is an antique style, older than Greek or Egyptian. Many of the phenomena of Winter are suggestive of an inexpressible tenderness and fragile delicacy. We are accustomed to hear this king described as a rude and boisterous tyrant; but with the gentleness of a lover he adorns the tresses of Summer.

At the approach of spring the red squirrels got under my house, two at a time, directly under my feet as I sat reading or writing, and kept up the queerest chuckling and chirruping and vocal pirouetting and gurgling sounds that ever were heard; and when I stamped they only chirruped the louder, as if past all fear and respect in their mad pranks, defying humanity to stop them. No, you don't — chickaree — chickaree. They were wholly deaf to my arguments, or failed to perceive their force, and fell into a strain of invective that was irresistible.

The first sparrow of spring! The year beginning with younger hope than ever! The faint silvery warblings heard over the partially bare and moist fields from the bluebird, the song sparrow, and the red-wing, as if the last flakes of winter tinkled as they fell! What at such a time are histories, chronologies, traditions, and all written revelations? The brooks sing carols and glees to the spring. The marsh hawk, sailing low over the

meadow, is already seeking the first slimy life that awakes. The sinking sound of melting snow is heard in all dells, and the ice dissolves apace in the ponds. The grass flames up on the hillsides like a spring fire, — “*et primitus oritur herba imbris primoribus evocata,*” — as if the earth sent forth an inward heat to greet the returning sun; not yellow but green is the color of its flame; — the symbol of perpetual youth, the grass-blade, like a long green ribbon, streams from the sod into the summer, checked indeed by the frost, but anon pushing on again, lifting its spear of last year’s hay with the fresh life below. It grows as steadily as the rill oozes out of the ground. It is almost identical with that, for in the growing days of June, when the rills are dry, the grass-blades are their channels, and from year to year the herds drink at this perennial green stream, and the mower draws from it betimes their winter supply. So our human life but dies down to its root, and still puts forth its green blade to eternity.

Walden is melting apace. There is a canal two rods wide along the northerly and westerly sides, and wider still at the east end. A great field of ice has cracked off from the main body. I hear a song sparrow singing from the bushes on the shore, — *olit, olit, olit*, — *chip, chip, chip, che char*, — *che wiss, wiss, wiss*. He too is helping to crack it. How handsome the great sweeping curves in the edge of the ice, answering somewhat to those of the shore, but more regular! It is unusually hard, owing to the recent severe but transient cold, and all watered or waved like a palace floor. But the wind slides eastward over its opaque surface in vain, till it

reaches the living surface beyond. It is glorious to behold this ribbon of water sparkling in the sun, the bare face of the pond full of glee and youth, as if it spoke the joy of the fishes within it, and of the sands on its shore, — a silvery sheen as from the scales of a leuciscus, as it were all one active fish. Such is the contrast between winter and spring. Walden was dead and is alive again. But this spring it broke up more steadily, as I have said.

The change from storm and winter to serene and mild weather, from dark and sluggish hours to bright and elastic ones, is a memorable crisis which all things proclaim. It is seemingly instantaneous at last. Suddenly an influx of light filled my house, though the evening was at hand, and the clouds of winter still overhung it, and the eaves were dripping with sleety rain. I looked out the window, and lo! where yesterday was cold gray ice there lay the transparent pond already calm and full of hope as in a summer evening, reflecting a summer evening sky in its bosom, though none was visible overhead, as if it had intelligence with some remote horizon. I heard a robin in the distance, the first I had heard for many a thousand years, methought, whose note I shall not forget for many a thousand more, — the same sweet and powerful song as of yore. O the evening robin, at the end of a New England summer day! If I could ever find the twig he sits upon! I mean *he*; I mean *the twig*. This at least is not the *Turdus migratorius*. The pitch pines and shrub oaks about my house, which had so long drooped, suddenly resumed their several characters, looked brighter, greener, and more erect and alive, as if effectually cleansed and restored by the rain. I knew

that it would not rain any more. You may tell by looking at any twig of the forest, ay, at your very wood-pile, whether its winter is past or not. As it grew darker, I was startled by the honking of geese flying low over the woods, like weary travellers getting in late from Southern lakes, and indulging at last in unrestrained complaint and mutual consolation. Standing at my door, I could hear the rush of their wings; when, driving toward my house, they suddenly spied my light, and with hushed clamor wheeled and settled in the pond. So I came in, and shut the door, and passed my first spring night in the woods.

In the morning I watched the geese from the door through the mist, sailing in the middle of the pond, fifty rods off, so large and tumultuous that Walden appeared like an artificial pond for their amusement. But when I stood on the shore they at once rose up with a great flapping of wings at the signal of their commander, and when they had got into rank circled about over my head, twenty-nine of them, and then steered straight to Canada, with a regular *honk* from the leader at intervals, trusting to break their fast in muddier pools. A "plump" of ducks rose at the same time and took the route to the north in the wake of their noisier cousins.

For a week I heard the circling, groping clangor of some solitary goose in the foggy mornings, seeking its companion, and still peopling the woods with the sound of a larger life than they could sustain. In April the pigeons were seen again flying express in small flocks, and in due time I heard the martins twittering over my clearing, though it had not seemed that the township contained so many that it could afford me any, and I

fancied that they were peculiarly of the ancient race that dwelt in hollow trees ere white men came. In almost all climes the tortoise and the frog are among the precursors and heralds of this season, and birds fly with song and glancing plumage, and plants spring and bloom, and winds blow, to correct this slight oscillation of the poles and preserve the equilibrium of nature.

As every season seems best to us in its turn, so the coming in of spring is like the creation of Cosmos out of Chaos and the realization of the Golden Age. —

*"Eurus ad Auroram Nabathaeaque regna recessit,
Persidaque, et radiis juga subdita matutinis."*

*"The East-Wind withdrew to Aurora and the Nabathæan kingdom,
And the Persian, and the ridges placed under the morning rays.*

*Man was born. Whether that Artificer of things,
The origin of a better world, made him from the divine seed;
Or the earth, being recent and lately sundered from the high
Ether, retained some seeds of cognate heaven."*

A single gentle rain makes the grass many shades greener. So our prospects brighten on the influx of better thoughts. We should be blessed if we lived in the present always, and took advantage of every accident that befell us, like the grass which confesses the influence of the slightest dew that falls on it; and did not spend our time in atoning for the neglect of past opportunities, which we call doing our duty. We loiter in winter while it is already spring. In a pleasant spring morning all men's sins are forgiven. Such a day is a truce to vice. While such a sun holds out to burn, the vilest sinner may return. Through our own recovered innocence

we discern the innocence of our neighbors. You may have known your neighbor yesterday for a thief, a drunkard, or a sensualist, and merely pitied or despised him, and despaired of the world; but the sun shines bright and warm this first spring morning, re-creating the world, and you meet him at some serene work, and see how his exhausted and debauched veins expand with still joy and bless the new day, feel the spring influence with the innocence of infancy, and all his faults are forgotten. There is not only an atmosphere of good will about him, but even a savor of holiness groping for expression, blindly and ineffectually perhaps, like a new-born instinct, and for a short hour the south hillside echoes to no vulgar jest. You see some innocent fair shoots preparing to burst from his gnarled rind and try another year's life, tender and fresh as the youngest plant. Even he has entered into the joy of his Lord. Why the jailer does not leave open his prison doors, — why the judge does not dismiss his case, — why the preacher does not dismiss his congregation! It is because they do not obey the hint which God gives them, nor accept the pardon which he freely offers to all.

“A return to goodness produced each day in the tranquil and beneficent breath of the morning, causes that in respect to the love of virtue and the hatred of vice, one approaches a little the primitive nature of man, as the sprouts of the forest which has been felled. In like manner the evil which one does in the interval of a day prevents the germs of virtues which began to spring up again from developing themselves and destroys them.

“After the germs of virtue have thus been prevented

many times from developing themselves, then the beneficent breath of evening does not suffice to preserve them. As soon as the breath of evening does not suffice longer to preserve them, then the nature of man does not differ much from that of the brute. Men seeing the nature of this man like that of the brute, think that he has never possessed the innate faculty of reason. Are those the true and natural sentiments of man?"

"The Golden Age was first created, which without any avenger
Spontaneously without law cherished fidelity and rectitude.
Punishment and fear were not; nor were threatening words read
On suspended brass; nor did the suppliant crowd fear
The words of their judge; but were safe without an avenger.
Not yet the pine felled on its mountains had descended
To the liquid waves that it might see a foreign world,
And mortals knew no shores but their own.

.

There was eternal spring, and placid zephyrs with warm
Blasts soothed the flowers born without seed."

On the 29th of April, as I was fishing from the bank of the river near the Nine-Acre-Corner bridge, standing on the quaking grass and willow roots, where the muskrats lurk, I heard a singular rattling sound, somewhat like that of the sticks which boys play with their fingers, when, looking up, I observed a very slight and graceful hawk, like a nighthawk, alternately soaring like a ripple and tumbling a rod or two over and over, showing the under side of its wings, which gleamed like a satin ribbon in the sun, or like the pearly inside of a shell. This sight reminded me of falconry and what nobleness and poetry are associated with that sport. The merlin it seemed to me it might be called: but I care not for its

name. It was the most ethereal flight I had ever witnessed. It did not simply flutter like a butterfly, nor soar like the larger hawks, but it sported with proud reliance in the fields of air; mounting again and again with its strange chuckle, it repeated its free and beautiful fall, turning over and over like a kite, and then recovering from its lofty tumbling, as if it had never set its foot on *terra firma*. It appeared to have no companion in the universe, — sporting there alone, — and to need none but the morning and the ether with which it played. It was not lonely, but made all the earth lonely beneath it. Where was the parent which hatched it, its kindred, and its father in the heavens? The tenant of the air, it seemed related to the earth but by an egg hatched some time in the crevice of a crag; — or was its native nest made in the angle of a cloud, woven of the rainbow's trimmings and the sunset sky, and lined with some soft midsummer haze caught up from earth? Its eyry now some cliffy cloud.

Beside this I got a rare mess of golden and silver and bright cupreous fishes, which looked like a string of jewels. Ah! I have penetrated to those meadows on the morning of many a first spring day, jumping from hummock to hummock, from willow root to willow root, when the wild river valley and the woods were bathed in so pure and bright a light as would have waked the dead, if they had been slumbering in their graves, as some suppose. There needs no stronger proof of immortality. All things must live in such a light. O Death, where was thy sting? O Grave, where was thy victory, then?

Our village life would stagnate if it were not for the un-

explored forests and meadows which surround it. We need the tonic of wildness, — to wade sometimes in marshes where the bittern and the meadow-hen lurk, and hear the booming of the snipe; to smell the whispering sedge where only some wilder and more solitary fowl builds her nest, and the mink crawls with its belly close to the ground. At the same time that we are earnest to explore and learn all things, we require that all things be mysterious and unexplorable, that land and sea be infinitely wild, unsurveyed and unfathomed by us because unfathomable. We can never have enough of nature. We must be refreshed by the sight of inexhaustible vigor, vast and titanic features, the sea-coast with its wrecks, the wilderness with its living and its decaying trees, the thunder-cloud, and the rain which lasts three weeks and produces freshets. We need to witness our own limits transgressed, and some life pasturing freely where we never wander. We are cheered when we observe the vulture feeding on the carrion which disgusts and disheartens us, and deriving health and strength from the repast. There was a dead horse in the hollow by the path to my house, which compelled me sometimes to go out of my way, especially in the night when the air was heavy, but the assurance it gave me of the strong appetite and inviolable health of Nature was my compensation for this. I love to see that Nature is so rife with life that myriads can be afforded to be sacrificed and suffered to prey on one another; that tender organizations can be so serenely squashed out of existence like pulp, — tadpoles which herons gobble up, and tortoises and toads run over in the road; and that sometimes it has rained flesh and blood!

With the liability to accident, we must see how little account is to be made of it. The impression made on a wise man is that of universal innocence. Poison is not poisonous after all, nor are any wounds fatal. Compassion is a very untenable ground. It must be expeditious. Its pleadings will not bear to be stereotyped.

Early in May, the oaks, hickories, maples, and other trees, just putting out amidst the pine woods around the pond, imparted a brightness like sunshine to the landscape, especially in cloudy days, as if the sun were breaking through mists and shining faintly on the hillsides here and there. On the third or fourth of May I saw a loon in the pond, and during the first week of the month I heard the whip-poor-will, the brown thrasher, the veery, the wood pewee, the chewink, and other birds. I had heard the wood thrush long before. The phœbe had already come once more and looked in at my door and window, to see if my house was cavern-like enough for her, sustaining herself on humming wings with clinched talons, as if she held by the air, while she surveyed the premises. The sulphur-like pollen of the pitch pine soon covered the pond and the stones and rotten wood along the shore, so that you could have collected a barrellful. This is the "sulphur showers" we hear of. Even in Calidas' drama of *Sacountala*, we read of "rills dyed yellow with the golden dust of the lotus." And so the seasons went rolling on into summer, as one rambles into higher and higher grass.

Thus was my first year's life in the woods completed; and the second year was similar to it. I finally left Walden September 6th, 1847.

XVIII

CONCLUSION

TO the sick the doctors wisely recommend a change of air and scenery. Thank Heaven, here is not all the world. The buckeye does not grow in New England, and the mockingbird is rarely heard here. The wild goose is more of a cosmopolite than we; he breaks his fast in Canada, takes a luncheon in the Ohio, and plumes himself for the night in a southern bayou. Even the bison, to some extent, keeps pace with the seasons, cropping the pastures of the Colorado only till a greener and sweeter grass awaits him by the Yellowstone. Yet we think that if rail fences are pulled down, and stone walls piled up on our farms, bounds are henceforth set to our lives and our fates decided. If you are chosen town clerk, forsooth, you cannot go to Tierra del Fuego this summer: but you may go to the land of infernal fire nevertheless. The universe is wider than our views of it.

Yet we should oftener look over the taffarel of our craft, like curious passengers, and not make the voyage like stupid sailors picking oakum. The other side of the globe is but the home of our correspondent. Our voyaging is only great-circle sailing, and the doctors prescribe for diseases of the skin merely. One hastens to southern Africa to chase the giraffe; but surely that is

not the game he would be after. How long, pray, would a man hunt giraffes if he could? Snipes and woodcocks also may afford rare sport; but I trust it would be nobler game to shoot one's self. —

“Direct your eye right inward, and you'll find
A thousand regions in your mind
Yet undiscovered. Travel them, and be
Expert in home-cosmography.”

What does Africa, — what does the West stand for? Is not our own interior white on the chart? black though it may prove, like the coast, when discovered. Is it the source of the Nile, or the Niger, or the Mississippi, or a Northwest Passage around this continent, that we would find? Are these the problems which most concern mankind? Is Franklin the only man who is lost, that his wife should be so earnest to find him? Does Mr. Grinnell know where he himself is? Be rather the Mungo Park, the Lewis and Clark and Frobisher, of your own streams and oceans; explore your own higher latitudes, — with shiploads of preserved meats to support you, if they be necessary; and pile the empty cans sky-high for a sign. Were preserved meats invented to preserve meat merely? Nay, be a Columbus to whole new continents and worlds within you, opening new channels, not of trade, but of thought. Every man is the lord of a realm beside which the earthly empire of the Czar is but a petty state, a hummock left by the ice. Yet some can be patriotic who have no *self*-respect, and sacrifice the greater to the less. They love the soil which makes their graves, but have no sympathy with the spirit which may still animate their clay. Patriotism is a maggot in their heads.

What was the meaning of that South-Sea Exploring Expedition, with all its parade and expense, but an indirect recognition of the fact that there are continents and seas in the moral world to which every man is an isthmus or an inlet, yet unexplored by him, but that it is easier to sail many thousand miles through cold and storm and cannibals, in a government ship, with five hundred men and boys to assist one, than it is to explore the private sea, the Atlantic and Pacific Ocean of one's being alone. —

*“Erret, et extremos alter scrutetur Iberos.
Plus habet hic vitæ, plus habet ille viæ.”*

Let them wander and scrutinize the outlandish Australians.
I have more of God, they more of the road.

It is not worth the while to go round the world to count the cats in Zanzibar. Yet do this even till you can do better, and you may perhaps find some “Symmes’ Hole” by which to get at the inside at last. England and France, Spain and Portugal, Gold Coast and Slave Coast, all front on this private sea; but no bark from them has ventured out of sight of land, though it is without doubt the direct way to India. If you would learn to speak all tongues and conform to the customs of all nations, if you would travel farther than all travellers, be naturalized in all climes, and cause the Sphinx to dash her head against a stone, even obey the precept of the old philosopher, and Explore thyself. Herein are demanded the eye and the nerve. Only the defeated and deserters go to the wars, cowards that run away and enlist. Start now on that farthest western way, which does not pause at the

Mississippi or the Pacific, nor conduct toward a worn-out China or Japan, but leads on direct, a tangent to this sphere, summer and winter, day and night, sun down, moon down, and at last earth down too.

It is said that Mirabeau took to highway robbery "to ascertain what degree of resolution was necessary in order to place one's self in formal opposition to the most sacred laws of society." He declared that "a soldier who fights in the ranks does not require half so much courage as a foot-pad," — "that honor and religion have never stood in the way of a well-considered and a firm resolve." This was manly, as the world goes; and yet it was idle, if not desperate. A saner man would have found himself often enough "in formal opposition" to what are deemed "the most sacred laws of society," through obedience to yet more sacred laws, and so have tested his resolution without going out of his way. It is not for a man to put himself in such an attitude to society, but to maintain himself in whatever attitude he find himself through obedience to the laws of his being, which will never be one of opposition to a just government, if he should chance to meet with such.

I left the woods for as good a reason as I went there. Perhaps it seemed to me that I had several more lives to live, and could not spare any more time for that one. It is remarkable how easily and insensibly we fall into a particular route, and make a beaten track for ourselves. I had not lived there a week before my feet wore a path from my door to the pond-side; and though it is five or six years since I trod it, it is still quite distinct. It is true, I fear, that others may have fallen into it, and so helped

to keep it open. The surface of the earth is soft and impressible by the feet of men; and so with the paths which the mind travels. How worn and dusty, then, must be the highways of the world, how deep the ruts of tradition and conformity! I did not wish to take a cabin passage, but rather to go before the mast and on the deck of the world, for there I could best see the moonlight amid the mountains. I do not wish to go below now.

I learned this, at least, by my experiment: that if one advances confidently in the direction of his dreams, and endeavors to live the life which he has imagined, he will meet with a success unexpected in common hours. He will put some things behind, will pass an invisible boundary; new, universal, and more liberal laws will begin to establish themselves around and within him; or the old laws be expanded, and interpreted in his favor in a more liberal sense, and he will live with the license of a higher order of beings. In proportion as he simplifies his life, the laws of the universe will appear less complex, and solitude will not be solitude, nor poverty poverty, nor weakness weakness. If you have built castles in the air, your work need not be lost; that is where they should be. Now put the foundations under them.

It is a ridiculous demand which England and America make, that you shall speak so that they can understand you. Neither men nor toadstools grow so. As if that were important, and there were not enough to understand you without them. As if Nature could support but one order of understandings, could not sustain birds as well as quadrupeds, flying as well as creeping things, and *hush* and *whoa*, which Bright can understand, were

the best English. As if there were safety in stupidity alone. I fear chiefly lest my expression may not be *extra-vagant* enough, may not wander far enough beyond the narrow limits of my daily experience, so as to be adequate to the truth of which I have been convinced. *Extra vagance!* it depends on how you are yarded. The migrating buffalo, which seeks new pastures in another latitude, is not extravagant like the cow which kicks over the pail, leaps the cowyard fence, and runs after her calf, in milking time. I desire to speak somewhere *without* bounds; like a man in a waking moment, to men in their waking moments; for I am convinced that I cannot exaggerate enough even to lay the foundation of a true expression. Who that has heard a strain of music feared then lest he should speak extravagantly any more forever? In view of the future or possible, we should live quite laxly and undefined in front, our outlines dim and misty on that side; as our shadows reveal an insensible perspiration toward the sun. The volatile truth of our words should continually betray the inadequacy of the residual statement. Their truth is instantly *translated*; its literal monument alone remains. The words which express our faith and piety are not definite; yet they are significant and fragrant like frankincense to superior natures.

Why level downward to our dullest perception always, and praise that as common sense? The commonest sense is the sense of men asleep, which they express by snoring. Sometimes we are inclined to class those who are once-and-a-half-witted with the half-witted, because we appreciate only a third part of their

wit. Some would find fault with the morning red, if they ever got up early enough. "They pretend," as I hear, "that the verses of Kabir have four different senses; illusion, spirit, intellect, and the exoteric doctrine of the Vedas;" but in this part of the world it is considered a ground for complaint if a man's writings admit of more than one interpretation. While England endeavors to cure the potato-rot, will not any endeavor to cure the brain-rot, which prevails so much more widely and fatally?

I do not suppose that I have attained to obscurity, but I should be proud if no more fatal fault were found with my pages on this score than was found with the Walden ice. Southern customers objected to its blue color, which is the evidence of its purity, as if it were muddy, and preferred the Cambridge ice, which is white, but tastes of weeds. The purity men love is like the mists which envelop the earth, and not like the azure ether beyond.

Some are dinning in our ears that we Americans, and moderns generally, are intellectual dwarfs compared with the ancients, or even the Elizabethan men. But what is that to the purpose? A living dog is better than a dead lion. Shall a man go and hang himself because he belongs to the race of pygmies, and not be the biggest pygmy that he can? Let every one mind his own business, and endeavor to be what he was made.

Why should we be in such desperate haste to succeed and in such desperate enterprises? If a man does not keep pace with his companions, perhaps it is because he hears a different drummer. Let him step to the

music which he hears, however measured or far away. It is not important that he should mature as soon as an apple tree or an oak. Shall he turn his spring into summer? If the condition of things which we were made for is not yet, what were any reality which we can substitute? We will not be shipwrecked on a vain reality. Shall we with pains erect a heaven of blue glass over ourselves, though when it is done we shall be sure to gaze still at the true ethereal heaven far above, as if the former were not?

There was an artist in the city of Kouroo who was disposed to strive after perfection. One day it came into his mind to make a staff. Having considered that in an imperfect work time is an ingredient, but into a perfect work time does not enter, he said to himself, It shall be perfect in all respects, though I should do nothing else in my life. He proceeded instantly to the forest for wood, being resolved that it should not be made of unsuitable material; and as he searched for and rejected stick after stick, his friends gradually deserted him, for they grew old in their works and died, but he grew not older by a moment. His singleness of purpose and resolution, and his elevated piety, endowed him, without his knowledge, with perennial youth. As he made no compromise with Time, Time kept out of his way, and only sighed at a distance because he could not overcome him. Before he had found a stock in all respects suitable the city of Kouroo was a hoary ruin, and he sat on one of its mounds to peel the stick. Before he had given it the proper shape the dynasty of the Candahars was at an end, and with the

point of the stick he wrote the name of the last of that race in the sand, and then resumed his work. By the time he had smoothed and polished the staff Kalpa was no longer the pole-star; and ere he had put on the ferule and the head adorned with precious stones, Brahma had awoke and slumbered many times. But why do I stay to mention these things? When the finishing stroke was put to his work, it suddenly expanded before the eyes of the astonished artist into the fairest of all the creations of Brahma. He had made a new system in making a staff, a world with full and fair proportions; in which, though the old cities and dynasties had passed away, fairer and more glorious ones had taken their places. And now he saw by the heap of shavings still fresh at his feet, that, for him and his work, the former lapse of time had been an illusion, and that no more time had elapsed than is required for a single scintillation from the brain of Brahma to fall on and inflame the tinder of a mortal brain. The material was pure, and his art was pure; how could the result be other than wonderful?

No face which we can give to a matter will stand us so well at last as the truth. This alone wears well. For the most part, we are not where we are, but in a false position. Through an infirmity of our natures, we suppose a case, and put ourselves into it, and hence are in two cases at the same time, and it is doubly difficult to get out. In sane moments we regard only the facts, the case that is. Say what you have to say, not what you ought. Any truth is better than make-believe. Tom Hyde, the tinker, standing on the gallows, was asked if

he had anything to say. "Tell the tailors," said he, "to remember to make a knot in their thread before they take the first stitch." His companion's prayer is forgotten.

However mean your life is, meet it and live it; do not shun it and call it hard names. It is not so bad as you are. It looks poorest when you are richest. The fault-finder will find faults even in paradise. Love your life, poor as it is. You may perhaps have some pleasant, thrilling, glorious hours, even in a poor-house. The setting sun is reflected from the windows of the almshouse as brightly as from the rich man's abode; the snow melts before its door as early in the spring. I do not see but a quiet mind may live as contentedly there, and have as cheering thoughts, as in a palace. The town's poor seem to me often to live the most independent lives of any. Maybe they are simply great enough to receive without misgiving. Most think that they are above being supported by the town; but it oftener happens that they are not above supporting themselves by dishonest means, which should be more disreputable. Cultivate poverty like a garden herb, like sage. Do not trouble yourself much to get new things, whether clothes or friends. Turn the old; return to them. Things do not change; we change. Sell your clothes and keep your thoughts. God will see that you do not want society. If I were confined to a corner of a garret all my days, like a spider, the world would be just as large to me while I had my thoughts about me. The philosopher said: "From an army of three divisions one can take away its general, and put it in disorder;

from the man the most abject and vulgar one cannot take away his thought." Do not seek so anxiously to be developed, to subject yourself to many influences to be played on; it is all dissipation. Humility like darkness reveals the heavenly lights. The shadows of poverty and meanness gather around us, "and lo! creation widens to our view." We are often reminded that if there were bestowed on us the wealth of Cræsus, our aims must still be the same, and our means essentially the same. Moreover, if you are restricted in your range by poverty, if you cannot buy books and newspapers, for instance, you are but confined to the most significant and vital experiences; you are compelled to deal with the material which yields the most sugar and the most starch. It is life near the bone where it is sweetest. You are defended from being a trifler. No man loses ever on a lower level by magnanimity on a higher. Superfluous wealth can buy superfluities only. Money is not required to buy one necessary of the soul.

I live in the angle of a leaden wall, into whose composition was poured a little alloy of bell-metal. Often, in the repose of my mid-day, there reaches my ears a confused *tintinnabulum* from without. It is the noise of my contemporaries. My neighbors tell me of their adventures with famous gentlemen and ladies, what notabilities they met at the dinner-table; but I am no more interested in such things than in the contents of the Daily Times. The interest and the conversation are about costume and manners chiefly; but a goose is a goose still, dress it as you will. They tell me of California and Texas, of England and the Indies, of the

Hon. Mr. — of Georgia or of Massachusetts, all transient and fleeting phenomena, till I am ready to leap from their court-yard like the Mameluke bey. I delight to come to my bearings, — not walk in procession with pomp and parade, in a conspicuous place, but to walk even with the Builder of the universe, if I may, — not to live in this restless, nervous, bustling, trivial Nineteenth Century, but stand or sit thoughtfully while it goes by. What are men celebrating? They are all on a committee of arrangements, and hourly expect a speech from somebody. God is only the president of the day, and Webster is his orator. I love to weigh, to settle, to gravitate toward that which most strongly and rightfully attracts me; — not hang by the beam of the scale and try to weigh less, — not suppose a case, but take the case that is; to travel the only path I can, and that on which no power can resist me. It affords me no satisfaction to commence to spring an arch before I have got a solid foundation. Let us not play at kittly-benders. There is a solid bottom everywhere. We read that the traveller asked the boy if the swamp before him had a hard bottom. The boy replied that it had. But presently the traveller's horse sank in up to the girths, and he observed to the boy, "I thought you said that this bog had a hard bottom." "So it has," answered the latter, "but you have not got half way to it yet." So it is with the bogs and quicksands of society; but he is an old boy that knows it. Only what is thought, said, or done at a certain rare coincidence is good. I would not be one of those who will foolishly drive a nail into mere lath and plastering; such a deed would

keep me awake nights. Give me a hammer, and let me feel for the furring. Do not depend on the putty. Drive a nail home and clinch it so faithfully that you can wake up in the night and think of your work with satisfaction, — a work at which you would not be ashamed to invoke the Muse. So will help you God, and so only. Every nail driven should be as another rivet in the machine of the universe, you carrying on the work.

Rather than love, than money, than fame, give me truth. I sat at a table where were rich food and wine in abundance, and obsequious attendance, but sincerity and truth were not; and I went away hungry from the inhospitable board. The hospitality was as cold as the ices. I thought that there was no need of ice to freeze them. They talked to me of the age of the wine and the fame of the vintage; but I thought of an older, a newer, and purer wine, of a more glorious vintage, which they had not got, and could not buy. The style, the house and grounds and “entertainment” pass for nothing with me. I called on the king, but he made me wait in his hall, and conducted like a man incapacitated for hospitality. There was a man in my neighborhood who lived in a hollow tree. His manners were truly regal. I should have done better had I called on him.

How long shall we sit in our porticoes practising idle and musty virtues, which any work would make impertinent? As if one were to begin the day with long-suffering, and hire a man to hoe his potatoes; and in the afternoon go forth to practise Christian meekness and charity with goodness aforethought! Consider the

China pride and stagnant self-complacency of mankind. This generation inclines a little to congratulate itself on being the last of an illustrious line; and in Boston and London and Paris and Rome, thinking of its long descent, it speaks of its progress in art and science and literature with satisfaction. There are the Records of the Philosophical Societies, and the public Eulogies of *Great Men*! It is the good Adam contemplating his own virtue. "Yes, we have done great deeds, and sung divine songs, which shall never die," — that is, as long as *we* can remember them. The learned societies and great men of Assyria, — where are they? What youthful philosophers and experimentalists we are! There is not one of my readers who has yet lived a whole human life. These may be but the spring months in the life of the race. If we have had the seven-years' itch, we have not seen the seventeen-year locust yet in Concord. We are acquainted with a mere pellicle of the globe on which we live. Most have not delved six feet beneath the surface, nor leaped as many above it. We know not where we are. Beside, we are sound asleep nearly half our time. Yet we esteem ourselves wise, and have an established order on the surface. Truly, we are deep thinkers, we are ambitious spirits! As I stand over the insect crawling amid the pine needles on the forest floor, and endeavoring to conceal itself from my sight, and ask myself why it will cherish those humble thoughts, and hide its head from me who might, perhaps, be its benefactor, and impart to its race some cheering information, I am reminded of the greater Benefactor and Intelligence that stands over me the human insect.

There is an incessant influx of novelty into the world, and yet we tolerate incredible dulness. I need only suggest what kind of sermons are still listened to in the most enlightened countries. There are such words as joy and sorrow, but they are only the burden of a psalm, sung with a nasal twang, while we believe in the ordinary and mean. We think that we can change our clothes only. It is said that the British Empire is very large and respectable, and that the United States are a first-rate power. We do not believe that a tide rises and falls behind every man which can float the British Empire like a chip, if he should ever harbor it in his mind. Who knows what sort of seventeen-year locust will next come out of the ground? The government of the world I live in was not framed, like that of Britain, in after-dinner conversations over the wine.

The life in us is like the water in the river. It may rise this year higher than man has ever known it, and flood the parched uplands; even this may be the eventful year, which will drown out all our muskrats. It was not always dry land where we dwell. I see far inland the banks which the stream anciently washed, before science began to record its freshets. Every one has heard the story which has gone the rounds of New England, of a strong and beautiful bug which came out of the dry leaf of an old table of apple-tree wood, which had stood in a farmer's kitchen for sixty years, first in Connecticut, and afterward in Massachusetts, — from an egg deposited in the living tree many years earlier still, as appeared by counting the annual layers beyond it; which was heard gnawing out for several weeks,

hatched perchance by the heat of an urn. Who does not feel his faith in a resurrection and immortality strengthened by hearing of this? Who knows what beautiful and winged life, whose egg has been buried for ages under many concentric layers of woodenness in the dead dry life of society, deposited at first in the alburnum of the green and living tree, which has been gradually converted into the semblance of its well-seasoned tomb, — heard perchance gnawing out now for years by the astonished family of man, as they sat round the festive board, — may unexpectedly come forth from amidst society's most trivial and handselled furniture, to enjoy its perfect summer life at last!

I do not say that John or Jonathan will realize all this; but such is the character of that morrow which mere lapse of time can never make to dawn. The light which puts out our eyes is darkness to us. Only that day dawns to which we are awake. There is more day to dawn. The sun is but a morning star.
